SSL COMMANDS ....................................................................................... 335
MITIGATING ARP SPOOFING ATTACKS VIA PACKET CONTENT ACL ............................... 512

PASSWORD RECOVERY PROCEDURE ........................................................................... 520
INTRODUCTION

The Switch can be managed through the Switch’s serial port, Telnet, or the Web-based management agent. The Command Line Interface (CLI) can be used to configure and manage the Switch via the serial port or Telnet interfaces.

The DES-3528/52 Layer 2 stackable Fast Ethernet Switch Series are members of the D-Link xStack® family. Ranging from 10/100Mbps edge switches to core gigabit switches, the xStack switch family has been future-proof designed to provide a stacking architecture with fault tolerance, flexibility, port density, robust security and maximum throughput with a user-friendly management interface for the networking professional.

This manual provides a reference for all of the commands contained in the CLI for the xStack® DES-3528, DES-3528P, DES-3528DC and DES-3552 series of switches. Configuration and management of the Switch via the Web-based management agent is discussed in the User’s Guide.

NOTE: For the remainder of this manual, all versions of the DES-3528, DES-3528P, DES-3528DC and DES-3552 switches will be referred to as simply the Switch or the DES-3528/52 Series.

Accessing the Switch via the Serial Port

The Switch’s serial port’s default settings are as follows:

- 115200 baud
- no parity
- 8 data bits
- 1 stop bit

A computer running a terminal emulation program capable of emulating a VT-100 terminal and a serial port configured as above is then connected to the Switch’s serial port via an RS-232 DB-9 cable.

With the serial port properly connected to a management computer, the following screen should be visible. If this screen does not appear, try pressing Ctrl+r to refresh the console screen.

![Figure 1-1. Initial CLI screen](image)

There is no initial username or password. Just press the Enter key twice to display the CLI input cursor – **DES-3528:5#**. This is the command line where all commands are input.
Setting the Switch’s IP Address

Each Switch must be assigned its own IP Address, which is used for communication with an SNMP network manager or other TCP/IP application (for example BOOTP, TFTP). The Switch’s default IP address is 10.90.90.90. Users can change the default Switch IP address to meet the specification of your networking address scheme.

The Switch is also assigned a unique MAC address by the factory. This MAC address cannot be changed, and can be found on the initial boot console screen – shown below.

![Boot Procedure](image)

The Switch’s MAC address can also be found in the Web management program on the Switch Information (Basic Settings) window on the Configuration menu.

The IP address for the Switch must be set before it can be managed with the Web-based manager. The Switch IP address can be automatically set using BOOTP or DHCP protocols, in which case the actual address assigned to the Switch must be known.

The IP address may be set using the Command Line Interface (CLI) over the console serial port as follows:

1. Starting at the command line prompt, enter the commands
   ```config ipif System ipaddress xxx.xxx.xxx.xxx/yyyy.yyyy.yyyy```
   Where the x’s represent the IP address to be assigned to the IP interface named System and the y’s represent the corresponding subnet mask.

2. Alternatively, users can enter
   ```config ipif System ipaddress xxx.xxx.xxx.xxx/z```
   Where the x’s represent the IP address to be assigned to the IP interface named System and the z represents the corresponding number of subnets in CIDR notation.

The IP interface named System on the Switch can be assigned an IP address and subnet mask which can then be used to connect a management station to the Switch’s Telnet or Web-based management agent.

![Example Configuration](image)

In the above example, the Switch was assigned an IP address of 10.24.73.21 with a subnet mask of 255.0.0.0. The system message Success indicates that the command was executed successfully. The Switch can now be configured and managed via Telnet, SNMP MIB browser and the CLI or via the Web-based management agent using the above IP address to connect to the Switch.
2

USING THE CONSOLE CLI

The DES-3528/52 Series supports a console management interface that allows the user to connect to the Switch’s management agent via a serial port and a terminal or a computer running a terminal emulation program. The console can also be used over the network using the TCP/IP Telnet protocol. The console program can be used to configure the Switch to use an SNMP-based network management software over the network.

This chapter describes how to use the console interface to access the Switch, change its settings, and monitor its operation.

NOTE: Switch configuration settings are saved to non-volatile RAM using the save command. The current configuration will then be retained in the Switch’s NV-RAM, and reloaded when the Switch is rebooted. If the Switch is rebooted without using the save command, the last configuration saved to NV-RAM will be loaded.

Connecting to the Switch

The console interface is used by connecting the Switch to a VT100-compatible terminal or a computer running an ordinary terminal emulator program (e.g., the HyperTerminal program included with the Windows operating system) using an RS-232C serial cable. Your terminal parameters will need to be set to:

- VT-100 compatible
- 115200 baud
- 8 data bits
- No parity
- One stop bit
- No flow control

Users can also access the same functions over a Telnet interface. Once users have set an IP address for your Switch, users can use a Telnet program (in VT-100 compatible terminal mode) to access and control the Switch. All of the screens are identical, whether accessed from the console port or from a Telnet interface.

After the Switch reboots and users have logged in, the console looks like this:

![Initial Console screen after logging in](image)

Figure 2-1. Initial Console screen after logging in

Commands are entered at the command prompt, DES-3528:5#.

There are a number of helpful features included in the CLI. Entering the ? command will display a list of all of the top-level commands.
? cable_diag ports
cfm linktrace
cfm loopback
clear
clear address_binding dhcp_snoop binding_entry ports
clear arp_table
clear attack_log
clear cfm pkt_cnt
clear counters
clear dhcp binding
clear dhcp conflict_ip
clear ethernet_oam ports
clear fdb
clear igmp_snooping data_driven_group
clear igmp_snooping statistic counter
clear jwac auth_state
clear log
clear mac_based_access_control auth_state
clear mld_snooping data_driven_group
clear mld_snooping statistic counter

Figure 2-2. The ? Command
When users enter a command without its required parameters, the CLI will prompt users with a Next possible completions: message.

DES-3528:5#config account
Command: config account
Next possible completions:
<username>

DES-3528:5#

Figure 2-3. Example Command Parameter Help
In this case, the command config account was entered with the parameter <username>. The CLI will then prompt users to enter the <username> with the message, Next possible completions: Every command in the CLI has this feature, and complex commands have several layers of parameter prompting.

In addition, after typing any given command plus one space, users can see all of the next possible sub-commands, in sequential order, by repeatedly pressing the Tab key.

To re-enter the previous command at the command prompt, press the up arrow cursor key. The previous command will appear at the command prompt.

DES-3528:5#config account
Command: config account
Next possible completions:
<username>

DES-3528:5#config account
Command: config account
Next possible completions:
<username>

DES-3528:5#config account
Command: config account
Next possible completions:
<username>

DES-3528:5#

Figure 2-4. Using the Up Arrow to Re-enter a Command
In the above example, the command config account was entered without the required parameter <username>, the CLI returned the Next possible completions: <username> prompt. The up arrow cursor control key was pressed to re-enter the previous
command (**config account**) at the command prompt. Now the appropriate username can be entered and the **config account** command re-executed.

All commands in the CLI function in this way. In addition, the syntax of the help prompts are the same as presented in this manual – angle brackets < > indicate a numerical value or character string, braces { } indicate optional parameters or a choice of parameters, and brackets [ ] indicate required parameters.

If a command is entered that is unrecognized by the CLI, the top-level commands will be displayed under the **Available commands:** prompt.

```
DES-3528:5#the
Available commands:
   ..   ?   cable_diag   cfm
      clear config create debug
      delete disable download enable
      login logout no ping
      reboot reconfig reset save
      set show telnet upload
DES-3528:5#
```

**Figure 2-5. The Next Available Commands Prompt**

The top-level commands consist of commands such as **show** or **config**. Most of these commands require one or more parameters to narrow the top-level command. This is equivalent to **show** what? or **config** what? Where the what? is the next parameter.

For example, if users enter the **show** command with no additional parameters, the CLI will then display all of the possible next parameters.
DES-3528:5#show

Command: show

Next possible completions:

- 802.1p
- access_profile
- address_binding
- accounting
- arp_spoofing_prevention
- attack_log
- auth_client
- auth_statistics
- authen_enable
- authen_login

Figure 2-6. Next possible completions: Show Command

In the above example, all of the possible next parameters for the show command are displayed. At the next command prompt, the up arrow was used to re-enter the show command, followed by the account parameter. The CLI then displays the user accounts configured on the Switch.
The following symbols are used to describe how command entries are made and values and arguments are specified in this manual. The online help contained in the CLI and available through the console interface uses the same syntax.

**NOTE:** All commands are case-sensitive. Be sure to disable Caps Lock or any other unwanted function that changes text case.

### <angle brackets>

- **Purpose:** Encloses a variable or value that must be specified.
- **Syntax:** `config ipif <ipif_name 12> [{ipaddress <network_address> | vlan <vlan_name 32> | state [enable | disable]} | bootp | dhcp]`
- **Description:** In the above syntax example, users must supply an IP interface name in the `<ipif_name 12>` space, a VLAN name in the `<vlan_name 32>` space, and the network address in the `<network_address>` space. Do not type the angle brackets.
- **Example Command:** `config ipif Engineering ipaddress 10.24.22.5/255.0.0.0 vlan Design state enable`

### [square brackets]

- **Purpose:** Encloses a required value or set of required arguments. One value or argument can be specified.
- **Syntax:** `create account [admin | operator | user] <username 15>`
- **Description:** In the above syntax example, users must specify either an `admin` or a `user` level account to be created. Do not type the square brackets.
- **Example Command:** `create account admin Tommy`

### | vertical bar |

- **Purpose:** Separates two or more mutually exclusive items in a list, one of which must be entered.
- **Syntax:** `create account [admin | operator | user] <username 15>`
- **Description:** In the above syntax example, users must specify either `admin`, or `user`. Do not type the vertical bar.
- **Example Command:** `create account admin Tommy`

### {braces}

- **Purpose:** Encloses an optional value or set of optional arguments.
- **Syntax:** `reset {{config | system}} force_agree`
- **Description:** In the above syntax example, users have the option to specify `config` or `system`. It is not necessary to specify either optional value, however the effect of the system reset is dependent on which, if any, value is specified. Therefore, with this example there are three possible outcomes of performing a system reset. See the following chapter, Basic Commands for more details about the reset command. Do not type the braces.
- **Example command:** `reset config`
### (parentheses)

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Indicates at least one or more of the values or arguments in the preceding syntax enclosed by braces must be specified.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config dhcp_relay {hops &lt;value 1-16&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>In the above syntax example, users have the option to specify hops or time or both of them. The &quot;(1)&quot; following the set of braces indicates at least one argument or value within the braces must be specified. Do not type the parentheses.</td>
</tr>
<tr>
<td>Example command</td>
<td><code>config dhcp_relay hops 3</code></td>

</tbody>
</table>

Each command is listed, in detail, in the following sections.
**create account**

**Purpose**
Used to create user accounts.

**Syntax**
create account [admin | operator | user] <username 15>

**Description**
This command is used to create user accounts that consist of a username of 1 to 15 characters and a password of 0 to 15 characters. Up to 8 user accounts can be created.

**Parameters**
[admin | operator | user] <username 15>

**Restrictions**
Only Administrator-level users can issue this command.
Usernames can be between 1 and 15 characters.
Passwords can be between 0 and 15 characters.

---

Example usage:

To create an administrator-level user account with the username “dlink”.

```
DES-3528:5# create account admin dlink
Command: create account admin dlink
Enter a case-sensitive new password: ****
Enter the new password again for confirmation: ****
Success.
DES-3528:5#
```

**NOTICE:** In case of lost passwords or password corruption, please refer to the D-Link website and the White Paper entitled “Password Recovery Procedure”, which will guide you through the steps necessary to resolve this issue.

---

**config account**

**Purpose**
Used to configure user accounts

**Syntax**
config account <username> {encrypt [plain_text | sha_1] <password>}

**Description**
When the password information is not specified in the command, the system will prompt the user to input the password interactively. For this case, the user can only input the plain text password.

If the password is present in the command, the user can select to input the password in the plain text form or in the encrypted form. The encryption algorithm is based on SHA-1.

**Parameters**

- `<username>` – Name of the account. The account must already be defined.
- `plain_text` – Select to specify the password in plain text form.
- `sha_1` – Select to specify the password in the SHA-1 encrypted form.
- `password` – The password for the user account.

The length for of password in plain-text form and in encrypted form are different. For the plain-text form, passwords must have a minimum of 0 character and can have a maximum of 15 characters. For the encrypted form password, the length is fixed to 35 bytes long. The password is case-sensitive.

**Restrictions**
Only Administrator level users can issue this command.
Usernames can be between 1 and 15 characters.
Passwords can be between 0 and 15 characters.

---

Example usage:

To configure the user password of “dlink” account:

```
DES-3528:5# config account dlink
Command: config account dlink
Enter a case-sensitive new password: ****
Enter the new password again for confirmation: ****
Success.
DES-3528:5#
```
### show account

**Purpose**
Used to display user accounts.

**Syntax**
`show account`

**Description**
This command is used to display all user accounts created on the Switch. Up to 8 user accounts can exist at one time.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To display the accounts that have been created:

```bash
DES-3528:5#show account
Command: show account

Current Accounts:
username | access level
---------|----------
dlink | Admin

Total Entries: 1

DES-3528:5#
```

### delete account

**Purpose**
Used to delete an existing user account.

**Syntax**
`delete account <username>`

**Description**
This command is used to delete an existing entry.

**Parameters**
- `<username>` – Name of the user who will be deleted.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To delete the user account “System”:

```bash
DES-3528:5#delete account System
Command: delete account System

Success.

DES-3528:5#
```
enable password encryption

**Purpose**
Used to enable password encryption.

**Syntax**
`enable password encryption`

**Description**
The user account configuration information will be stored in the configuration file, and can be applied to the system later.

If the password encryption is enabled, the password will be in encrypted form.

When password encryption is disabled, if the user specifies the password in plain text form, the password will be in plain text form. However, if the user specifies the password in encrypted form, or if the password has been converted to encrypted form by the last enable password encryption command, the password will still be in the encrypted form. It cannot be reverted to the plaintext.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To enable password encryption:
```
DES-3528:5#enable password encryption
Command: enable password encryption
Success.

DES-3528:5#
```

disable password encryption

**Purpose**
Used to disable password encryption.

**Syntax**
`disable password encryption`

**Description**
The user account configuration information will be stored in the configuration file, and can be applied to the system later.

If the password encryption is enabled, the password will be in encrypted form.

When password encryption is disabled, if the user specifies the password in plain text form, the password will be in plain text form. However, if the user specifies the password in encrypted form, or if the password has been converted to encrypted form by the last enable password encryption command, the password will still be in the encrypted form. It cannot be reverted to the plaintext.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To disable password encryption:
```
DES-3528:5#disable password encryption
Command: disable password encryption
Success.

DES-3528:5#
```
show session

**Purpose**
Used to display a list of currently logged-in users.

**Syntax**
show session

**Description**
This command displays a list of all the users that are logged-in at the time the command is issued.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To display the way that the users logged in:

```
DES-3528:5#show session
Command: show session

ID  Live Time       From           Level    Name
---  ---------       ------------   -----    -------
 8   00:00:16.250   Serial Port    5        Anonymous

Total Entries: 1
```

show switch

**Purpose**
Used to display general information about the Switch.

**Syntax**
show switch

**Description**
This command displays information about the Switch.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To display the Switch’s information:
Des-3528:5#show switch
Command: show switch

Device Type : DES-3528 Fast Ethernet Switch
MAC Address : 00-21-91-53-3E-C8
IP Address : 10.24.73.21 (Manual)
VLAN Name : default

TELNET : Enabled (TCP 23)
WEB : Enabled (TCP 80)
SNMP : Disabled
SSL status : Disabled

CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All

**show device_status**

**Purpose**  
Used to display the current Switch power status.

**Syntax**  
show device_status

**Description**  
This command displays status of both the Switch’s internal and external power.

**Parameters**  
None.

**Restrictions**  
None.

Example usage:

To display the Switch’s power status:

DES-3528:5#show device_status
Command: show device_status

<table>
<thead>

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
show serial_port

Purpose: Used to display the current serial port settings.
Syntax: `show serial_port`
Description: This command displays the current serial port settings.
Parameters: None.
Restrictions: None.

Example usage:
To display the serial port setting:

```
DES-3552:5#show serial_port
Command: show serial_port
Baud Rate     : 115200
Data Bits     : 8
Parity Bits   : None
Stop Bits     : 1
Auto-Logout   : Never
DES-3552:5#
```

config serial_port

Purpose: Used to configure the serial port.
Syntax: `config serial_port {baud_rate [9600 | 19200 | 38400 | 115200] | auto_logout [never | 2_minutes | 5_minutes | 10_minutes | 15_minutes]}(1)`
Description: This command is used to configure the serial port's baud rate and auto logout settings.
Parameters:
- `baud_rate [9600 | 19200 | 38400 | 115200]` – The serial bit rate that will be used to communicate with the management host. There are four options: 9600, 19200, 38400, 115200. Factory default setting is 115200.
- `never` – No time limit on the length of time the console can be open with no user input.
- `2_minutes` – The console will log out the current user if there is no user input for 2 minutes.
- `5_minutes` – The console will log out the current user if there is no user input for 5 minutes.
- `10_minutes` – The console will log out the current user if there is no user input for 10 minutes.
- `15_minutes` – The console will log out the current user if there is no user input for 15 minutes.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To configure baud rate:

```
DES-3528:5#config serial_port baud_rate 115200
Command: config serial_port baud_rate 115200
Success.
DES-3528:5#
```
enable clipaging

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to pause the scrolling of the console screen when a command displays more than one page.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable clipaging</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used when issuing a command which causes the console screen to rapidly scroll through several pages. This command will cause the console to pause at the end of each page. The default setting is enabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable pausing of the screen display when the show command output reaches the end of the page:

DES-3528:5#enable clipaging
Command: enable clipaging
Success.
DES-3528:5#

disable clipaging

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the pausing of the console screen scrolling at the end of each page when a command displays more than one screen of information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable clipaging</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable the pausing of the console screen at the end of each page when a command would display more than one screen of information.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable pausing of the screen display when show command output reaches the end of the page:

DES-3528:5#disable clipaging
Command: disable clipaging
Success.
DES-3528:5#
**telnet**

**Purpose**
Used to login the remote device system through the network.

**Syntax**
telnet <ipaddr> {tcp_port <value 0-65535>}

**Description**
This command is used when the manager want to manage the device system which isn’t on local. So can use this command to login in the remote system which is located on other side. If connect successful, some actions can be done as local.

**Parameters**
- `<ipaddr>` – The network ip address. This is the destination which wants to login.
- `<value 0-65535>` – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” TCP port for the Telnet protocol is 23.

**Restrictions**
None.

Example usage:

Telnet to the remote Switch:

```
DES-3528:5#telnet 172.18.168.12 tcp_port 50
Command: telnet 172.18.168.12 tcp_port 50
Connecting to server, please wait....
```

```
DES-3552 Gigabit Ethernet Switch
Command Line Interface
Firmware: Build 1.03.B009
Copyright(C) 2008 D-Link Corporation. All rights reserved.
UserName:
PassWord:
```

**enable telnet**

**Purpose**
Used to enable communication with and management of the Switch using the Telnet protocol.

**Syntax**
enable telnet <tcp_port_number 1-65535>

**Description**
This command is used to enable the Telnet protocol on the Switch. The user can specify the TCP or UDP port number the Switch will use to listen for Telnet requests.

**Parameters**
- `<tcp_port_number 1-65535>` – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” TCP port for the Telnet protocol is 23.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable Telnet and configure port number:

```
DES-3528:5#enable telnet 23
Command: enable telnet 23
Success.

DES-3528:5#
```
disable telnet

Purpose: Used to disable the Telnet protocol on the Switch.
Syntax: disable telnet
Description: This command is used to disable the Telnet protocol on the Switch.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To disable the Telnet protocol on the Switch:

```
DES-3528:5#disable telnet
Command: disable telnet
Success.
DES-3528:5#
```

enable web

Purpose: Used to enable the HTTP-based management software on the Switch.
Syntax: enable web <tcp_port_number 1-65535>
Description: This command is used to enable the Web-based management software on the Switch. The user can specify the TCP port number the Switch will use to listen for Telnet requests.
Parameters: <tcp_port_number 1-65535> – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” port for the Web-based management software is 80.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To enable HTTP and configure port number:

```
DES-3528:5#enable web 80
Command: enable web 80
Success.
DES-3528:5#
```

disable web

Purpose: Used to disable the HTTP-based management software on the Switch.
Syntax: disable web
Description: This command disables the Web-based management software on the Switch.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To disable HTTP:
DES-3528:5#disable web
Command: disable web
Success.
DES-3528:5#

save

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to save changes in the Switch’s configuration to non-volatile RAM.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`save ([config &lt;config_id 1-2&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enter the current switch configuration into non-volatile RAM. The saved switch configuration will be loaded into the Switch’s memory each time the Switch is restarted.</td>
</tr>
</tbody>
</table>
| Parameters    | `config <config_id 1-2>` – Specify to save current settings to configuration file 1 or 2.  
`log` – Specify to save current Switch log to NV-RAM.  
`all` – Specify to save all configuration settings. If nothing is specified after “save”, the Switch will save all. |
| Restrictions  | Only Administrator and Operator-level users can issue this command. |

Example usage:

To save the Switch’s current configuration to non-volatile RAM:

DES-3528:5#save
Command: save
Saving all configurations to NV-RAM... Done.
DES-3528:5#

reboot

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to restart the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>reboot {force_agree}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to restart the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>force_agree</code> – When force_agree is specified, the reboot command will be executed immediately without further confirmation.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To restart the Switch:

DES-3528:5#reboot
Command: reboot
Are you sure you want to proceed with the system reboot? (y|n)y
Please wait, the switch is rebooting...
reset

Purpose
Used to reset the Switch to the factory default settings.

Syntax
reset {[config | system]} {force_agree}

Description
This command is used to restore the Switch’s configuration to the default settings assigned from the factory.

Parameters
config – If the keyword ‘config’ is specified, all of the factory default settings are restored on the Switch including the IP address, user accounts, and the switch history log. The Switch will not save or reboot.

system – If the keyword ‘system’ is specified all of the factory default settings are restored on the Switch. The Switch will save and reboot after the settings are changed to default. Rebooting will clear all entries in the Forwarding Data Base.

force_agree – When force_agree is specified, the reset command will be executed immediately without further confirmation.

If no parameter is specified, the Switch’s current IP address, user accounts, and the switch history log are not changed. All other parameters are restored to the factory default settings. The Switch will not save or reboot.

NOTE: The serial port baud rate will not be changed by the reset command. It will not be restored to the factory default setting.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To restore all of the Switch’s parameters to their default values:

DES-3528:5#reset config
Command: reset config
Are users sure to proceed with system reset?(y/n)y
Success.

login

Purpose
Used to log in a user to the Switch’s console.

Syntax
login

Description
This command is used to initiate the login procedure. The user will be prompted for a Username and Password.

Parameters
None.

Restrictions
None.

Example usage:
To initiate the login procedure:

DES-3528:5#login
Command: login
UserName:
### logout

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to log out a user from the Switch’s console.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>logout</td>
</tr>
<tr>
<td>Description</td>
<td>This command terminates the current user’s session on the Switch’s console.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To terminate the current user’s console session:

```
DES-3528:5#logout
```
MODIFY BANNER AND PROMPT COMMANDS

Administrator level users can modify the login banner (greeting message) and command prompt by using the commands described below.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config command_prompt</td>
<td>&lt;string 16&gt;</td>
</tr>
<tr>
<td>config greeting_message</td>
<td>(default)</td>
</tr>
<tr>
<td>show greeting_message</td>
<td></td>
</tr>
</tbody>
</table>

The Modify Banner and Prompt commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

**config command prompt**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the command prompt.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config command_prompt [&lt;string 16&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to change the command prompt.</td>
</tr>
<tr>
<td>Parameters</td>
<td>string 16 – The command prompt can be changed by entering a new name of no more than 16 characters.</td>
</tr>
<tr>
<td></td>
<td>username – The command prompt will be changed to the login username.</td>
</tr>
<tr>
<td></td>
<td>default – The command prompt will reset to factory default command prompt.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command. Other restrictions include:</td>
</tr>
<tr>
<td></td>
<td>• If the “reset” command is executed, the modified command prompt will remain modified. However, the “reset config/reset system” command will reset the command prompt to the original factory banner.</td>
</tr>
</tbody>
</table>

Example usage:

To modify the command prompt to “AtYourService”:

```
DES-3528:5#config command_prompt AtYourService
Command: config command_prompt AtYourService
Success.
AtYourService:admin5#
```
config greeting_message

**Purpose**
Used to configure the login banner (greeting message).

**Syntax**
config greeting_message {default}

**Description**
This command is used to modify the login banner (greeting message).

**Parameters**
default – If the user enters default to the modify banner command, then the banner will be reset to the original factory banner.

To open the Banner Editor, click enter after typing the config greeting_message command. Type the information to be displayed on the banner by using the commands described on the Banner Editor:
- Quit without save: Ctrl+C
- Save and quit: Ctrl+W
- Move cursor: Left/Right/Up/Down
- Delete line: Ctrl+D
- Erase all setting: Ctrl+X
- Reload original setting: Ctrl+L

**Restrictions**
Only Administrator and Operator-level users can issue this command. Other restrictions include:
- If the “reset” command is executed, the modified banner will remain modified. However, the “reset config/reset system” command will reset the modified banner to the original factory banner.
- The capacity of the banner is 6*80. 6 Lines and 80 characters per line.
- Ctrl+W will only save the modified banner in the DRAM. Users need to type the “save” command to save it into FLASH.
- Only valid in threshold level.

Example usage:

To modify the banner:

```
DES-3528:5# config greeting_message
Command: config greeting_message

Greeting Messages Editor

Ctrl+X      Erase all setting
Ctrl+L      Reload original setting
```
show greeting_message

Purpose
Used to view the currently configured greeting message configured on the Switch.

Syntax
show greeting_message

Description
This command is used to view the currently configured greeting message on the Switch.

Parameters
None.

Restrictions
None.

Example usage:

To view the currently configured greeting message:

```
DES-3528:5#show greeting_message
Command: show greeting_message

```
The switch port commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config ports</td>
<td>[ &lt;portlist&gt;</td>
</tr>
<tr>
<td>show ports</td>
<td>([&lt;portlist&gt;][description</td>
</tr>
<tr>
<td>enable jumbo_frame</td>
<td></td>
</tr>
<tr>
<td>disable jumbo_frame</td>
<td></td>
</tr>
<tr>
<td>show jumbo_frame</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config ports

**Purpose**

Used to configure the Switch’s port settings.

**Syntax**

```plaintext
config ports [ <portlist> | all ] [medium_type{fiber | copper}][ speed {auto | 10_half | 10_full | 100_half | 100_full | 1000_full{master | slave} ] | flow_control {enable | disable} | learning {enable | disable} | state {enable | disable} | [description <desc 1-32> | clear_description | mdix {auto | normal | cross}](1)
```

**Description**

This command is used to configure the Switch’s Ethernet ports. Only the ports listed in the `<portlist>` will be affected.

**Parameters**

- **all** – Configure all ports on the Switch.
- `<portlist>` – Specifies a port or range of ports to be configured.
- **speed** – Allows the user to adjust the speed for a port or range of ports. The user has a choice of the following:
  - `auto` – Enables auto-negotiation for the specified range of ports.
  - `[10 | 100 | 1000]` – Configures the speed in Mbps for the specified range of ports. Gigabit ports are statically set to 1000 and cannot be set to slower speeds. When setting port speed to 1000_full, user should specify master or slave mode for 1000 base TX interface, and leave the 1000_full without any master or slave setting for other interfaces.
  - `[half | full]` – Configures the specified range of ports as either full-duplex or half-duplex.
- `flow_control {enable | disable}` – Enable or disable flow control for the specified ports.
- `learning {enable | disable}` – Enables or disables the MAC address learning on the specified range of ports.
- `medium_type` – Specify the medium type while the configured ports are combo ports. It’s an optional parameter for configuring medium type combo ports. For no combo ports, user does not need to specify medium_type in the commands.
- `state {enable | disable}` – Enables or disables the specified range of ports.
- `description` – Enter an alphanumeric string of no more than 32 characters to describe a selected port interface.
- `clear description` – To clear the description.
- `mdix {auto | normal | cross}` – MDIX mode can be specified as `auto`, `normal`, or `cross`. If set to normal state, the port is in MDIX mode and can be connected to a port on an end node, such as a server or PC, using a straight-through cable. If set to cross state, the port is in MDI mode, and can be connected to a port on another switch or hub that uses MDI-X ports.
config ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the speed of ports 1-3 of unit 1 to be 10 Mbps, full duplex, learning enabled, state enabled and flow control enabled.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config ports {&lt;portlist&gt;} speed {&lt;speed&gt;} learning {enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the speed of ports 1-3 of unit 1 to be 10 Mbps, full duplex, learning enabled, state enabled and flow control enabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>{&lt;portlist&gt;} – Specifies a port or range of ports to be displayed.</td>
</tr>
<tr>
<td>restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the speed of ports 1-3 of unit 1 to be 10 Mbps, full duplex, learning enabled, state enabled and flow control enabled:

```
DES-3528:5# config ports 1-3 speed 10_full learning enable state enable flow_control enable
```

Command: config ports 1-3 speed 10_full learning enable state enable flow_control enable

Success.

DES-3528:5#

show ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current configuration of a range of ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show ports {&lt;portlist&gt;} { [description</td>
</tr>
<tr>

</tbody>
</table>

---

**enable jumbo_frame**

- **Purpose**
  Used to enable the jumbo frame function on the Switch.

- **Syntax**
  ```
  enable jumbo_frame
  ```

- **Description**
  This command will allow ethernet frames larger than 1536 bytes to be processed by the Switch. The maximum size of the jumbo frame may not exceed 9220 Bytes tagged.

- **Parameters**
  None.

- **Restrictions**
  Only Administrator and Operator-level users can issue this command.

- **Example usage:**
  To enabled the jumbo frame:

  ```
  DES-3528:5# enable jumbo_frame
  Command: enable jumbo_frame
  The maximum size of jumbo frame is 9216 bytes.
  Success.
  DES-3528:5#
  ```
**disable jumbo_frame**

**Purpose**
Used to disable the jumbo frame function on the Switch.

**Syntax**
disable jumbo_frame

**Description**
This command will disable the jumbo frame function on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To disable the jumbo frame:

DES-3528:5# disable jumbo_frame
Command: disable jumbo_frame
Success.
DES-3528:5#

**show jumbo_frame**

**Purpose**
Used to show the status of the jumbo frame function on the Switch.

**Syntax**
show jumbo_frame

**Description**
This command will show the status of the jumbo frame function on the Switch.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To show the jumbo frame status currently configured on the Switch:

DES-3528:5# show jumbo_frame
Command: show jumbo_frame

Jumbo Frame State : Disabled
Maximum Frame Size : 1536 Bytes

DES-3528:5#
PORT SECURITY COMMANDS

The Switch’s port security commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
</table>
| config port_security ports  | <portlist> | all | [admin_state [enable | disable] | max_learning_addr <max_lock_no 0-64> | lock_address_mode [Permanent | DeleteOnTimeout | DeleteOnReset] |(1)
| delete port_security_entry  | vlan_name <vlan_name 32> mac_address <macaddr> port <port> |
| clear port_security_entry   | port <portlist> |
| show port_security          | <portlist> |
| enable port_security trap_log | |
| disable port_security trap_log | |

Each command is listed, in detail, in the following sections.

**config port_security ports**

Purpose: Used to configure port security settings.

Syntax: `config port_security ports [ <portlist> | all ] [ admin_state [ enable | disable] | max_learning_addr <max_lock_no 0-64> | lock_address_mode [ Permanent | DeleteOnTimeout | DeleteOnReset ]] (1)`

Description: This command allows for the configuration of the port security feature. Only the ports listed in the `<portlist>` are affected.

Parameters:
- `portlist` – Specifies a port or range of ports to be configured.
- `all` – Configure port security for all ports on the Switch.
- `admin_state [ enable | disable]` – Enable or disable port security for the listed ports.
- `max_learning_addr <max_lock_no 0-64>` – Use this to limit the number of MAC addresses dynamically listed in the FDB for the ports.
- `lock_address_mode [ Permanent | DeleteOnTimeout | DeleteOnReset ]` – Indicates the method of locking addresses. The user has three choices:
  - `Permanent` – The locked addresses will not age out after the aging timer expires.
  - `DeleteOnTimeout` – The locked addresses will age out after the aging timer expires.
  - `DeleteOnReset` – The locked addresses will not age out until the Switch has been reset.

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the port security:

```
DES-3528:5# config port_security ports 1-5 admin_state enable max_learning_addr 5 lock_address_mode DeleteOnReset
Command: config port_security ports 1-5 admin_state enable max_learning_addr 5 lock_address_mode DeleteOnReset
Success.
DES-3528:5#
```
**delete port_security_entry**

**Purpose**
Used to delete a port security entry by MAC address, port number and VLAN ID.

**Syntax**
delete port_security_entry vlan name <vlan_name 32> mac_address <macaddr> port <port>

**Description**
This command is used to delete a single, previously learned port security entry by port, VLAN name, and MAC address.

**Parameters**
- `vlan name <vlan_name 32>` – Enter the corresponding VLAN name of the port to delete.
- `mac_address <macaddr>` – Enter the corresponding MAC address, previously learned by the port, to delete.
- `port <port>` – Enter the port number which has learned the previously entered MAC address.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To delete a port security entry:

```
DES-3528:5#delete port_security_entry vlan_name default mac_address 00-01-30-10-2C-C7 port 6
Command: delete port_security_entry vlan_name default mac_address 00-01-30-10-2C-C7 port 6
Success.

DES-3528:5#
```

**clear port_security_entry**

**Purpose**
Used to clear MAC address entries learned from a specified port for the port security function.

**Syntax**
clear port_security_entry port <portlist>

**Description**
This command is used to clear MAC address entries which were learned by the Switch by a specified port. This command only relates to the port security function.

**Parameters**
- `<portlist>` – Specifies a port or port range to clear.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To clear a port security entry by port:

```
DES-3528:5# clear port_security_entry port 6
Command: clear port_security_entry port 6
Success.

DES-3528:5#
```
### show port_security

**Purpose**
Used to display the current port security configuration.

**Syntax**
```
show port_security {ports <portlist>}
```

**Description**
This command is used to display port security information of the Switch’s ports. The information displayed includes port security trap/log state, admin state, maximum number of learning address and lock mode.

**Parameters**
- `<portlist>` – Specifies a port or range of ports to be viewed.

**Restrictions**
None.

Example usage:

To display the port security configuration:

```
DES-3528:5#show port_security ports 1-5
Command: show port_security ports 1-5

Port_security Trap/Log : Disabled

<table>
<thead>
<tr>
<th>Port</th>
<th>Admin State</th>
<th>Max. Learning Addr.</th>
<th>Lock Address Mode</th>

</table>

DES-3552:5#
```

### enable port_security trap_log

**Purpose**
Used to enable the trap log for port security.

**Syntax**
```
enable port_security trap_log
```

**Description**
This command, along with the `disable port_security trap_log`, will enable and disable the sending of log messages to the Switch’s log and SNMP agent when the port security of the Switch has been triggered.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable the port security trap log setting:

```
DES-3528:5#enable port_security trap_log
Command: enable port_security trap_log

Success.

DES-3528:5#
```
### disable port_security trap_log

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the trap log for port security.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable port_security trap_log</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command, along with the <code>enable port_security trap_log</code>, will enable and disable the sending of log messages to the Switch’s log and SNMP agent when the port security of the Switch has been triggered.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the port security trap log setting:

```
DES-3528:5#disable port_security trap_log
Command: disable port_security trap_log
Success.
DES-3528:5#
```
The stacking configuration commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config box_priority current_box_id</td>
<td>&lt;value 1-8&gt; priority &lt;value 1-63&gt;</td>
</tr>
<tr>
<td>config box_id current_box_id</td>
<td>&lt;value 1-8&gt; new_box_id [auto</td>
</tr>
<tr>
<td>show stack_information</td>
<td></td>
</tr>
<tr>
<td>config stacking mode</td>
<td>[disable</td>
</tr>
<tr>
<td>show stacking mode</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config box_priority

**Purpose**
Used to configure box priority so as to determine which box (switch) becomes the master. A lower number denotes a higher priority.

**Syntax**
`config box_priority current_box_id <value 1-8> priority <value 1-63>`

**Description**
This command is used to configure the box (switch) priority.

**Parameters**
- `current_box_id` <value 1–8> – Identifies the Switch being configured. Range is 1 to 8.
- `priority` <value 1–63> – Assigns a priority value to the box. A Lower number denotes a higher priority. The valid priority range is 1 to 63.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Usage example:**
To configure box priority:

```
DES-3528:5#config box_priority current_box_id 1 priority 1
Command: config box_priority current_box_id 1 priority 1
Success.
DES-3528:5#
```

### config box_id

**Purpose**
Used to configure box ID. Users can use this command to reassign box IDs.

**Syntax**
`config box_id current_box_id <value 1-8> new_box_id [auto | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8]`

**Description**
This command is used to assign box IDs to switches in a stack.

**Parameters**
- `current_box_id` – Identifies the Switch being configured. Range is 1 to 8.
- `new_box_id` – The new ID being assigned to the Switch (box). Range is 1 to 8.
- `auto` – Allows the box ID to be assigned automatically.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Usage example:**
To change a box ID:

```
DES-3528:5#config box_id current_box_id 1 new_box_id auto
Command: config box_id current_box_id 1 new_box_id auto
Success.
DES-3528:5#
```
show stack_information

Purpose: Used to display the stack information table.

Syntax: show stack_information

Description: This command displays stack information.

Parameters: None.

Restrictions: Only Administrator and Operator-level users can issue this command.

Usage example:
To display stack information:

DES-3528:5# show stack_information
Command: show stack_information

Topology: Duplex_Chain
My Box ID: 1
Master ID: 1
BK Master ID: 2
Box Count: 2

DES-3528:5#
config stacking mode

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the stacking mode.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config stacking mode [disable</td>
</tr>
<tr>
<td>Description</td>
<td>This command will enable or disable the stacking mode for the switch. When enabled, the last two ports on the rear of the switch will be enabled for stacking.</td>
</tr>
<tr>
<td>Parameters</td>
<td>`enable</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Usage example:

To disable the stacking mode:

```
DES-3528:5#config stacking mode disable
Command: config stacking mode disable
Change Box bootmode may cause devices work restart, still continue? (y/n)y
```

show stacking mode

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to view the current stacking mode.</th>

</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show stacking mode</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will display whether the current stacking mode is enabled or disabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Usage example:

To view the current stacking mode:

```
DES-3528:5#show stacking mode
Command: show stacking mode
Stacking mode : Enabled
DES-3528:5#
```
NETWORK MANAGEMENT (SNMP) COMMANDS

The Switch supports the Simple Network Management Protocol (SNMP) versions 1, 2c, and 3. Users can specify which version of the SNMP users want to use to monitor and control the Switch. The three versions of SNMP vary in the level of security provided between the management station and the network device. The following table lists the security features of the three SNMP versions:

<table>
<thead>
<tr>
<th>SNMP Version</th>
<th>Authentication Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>v1</td>
<td>Community String</td>
<td>Community String is used for authentication – NoAuthNoPriv</td>
</tr>
<tr>
<td>v2c</td>
<td>Community String</td>
<td>Community String is used for authentication – NoAuthNoPriv</td>
</tr>
<tr>
<td>v3</td>
<td>Username</td>
<td>Username is used for authentication – NoAuthNoPriv, AuthNoPriv or AuthPriv</td>
</tr>
<tr>
<td>v3</td>
<td>MD5 or SHA</td>
<td>Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthNoPriv</td>
</tr>
<tr>
<td>v3</td>
<td>MD5 DES or SHA DES</td>
<td>Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthPriv. DES 56-bit encryption is added based on the CBC-DES (DES-56) standard</td>
</tr>
</tbody>
</table>

The network management commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create snmp user</td>
<td>&lt;user_name 32&gt; &lt;groupname 32&gt; {encrypted [by_password auth [md5 &lt;auth_password 8-16&gt;</td>

</tr>
<tr>
<td>enable snmp</td>
<td></td>
</tr>
<tr>
<td>disable snmp</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### create snmp user

**Purpose**  
Used to create a new SNMP user and adds the user to an SNMP group that is also created by this command.

**Syntax**  
`create snmp user <user_name 32> <groupname 32> {encrypted [by_password auth [md5 <auth_password 8-16> | sha <auth_password 8-20>] priv [none | des <priv_password 8-16>] | by_key auth [md5 <auth_key 32-32> | sha <auth_key 40-40>] priv [none | des <priv_key 32-32>]]

**Description**  
This command creates a new SNMP user and adds the user to an SNMP group that is also created by this command. SNMP ensures:

- **Message integrity** – Ensures that packets have not been tampered with during transit.
- **Authentication** – Determines if an SNMP message is from a valid source.
- **Encryption** – Scrambles the contents of messages to prevent it from being viewed by an unauthorized source.

**Parameters**  
- `<user_name 32>` – An alphanumeric name of up to 32 characters that will identify the new SNMP user.
- `<groupname 32>` – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.
- `encrypted` – Allows the user to choose a type of authorization for authentication using SNMP. The user may choose:
  - `by_password` – Requires the SNMP user to enter a password for authentication and privacy. The password is defined by specifying the `auth_password` below. This method is recommended.
  - `by_key` – Requires the SNMP user to enter an encryption key for authentication and privacy. The key is defined by specifying the key in hex form below. This method is not recommended.
- `auth` – The user may also choose the type of authentication algorithms used to authenticate the snmp user. The choices are:
  - `md5` – Specifies that the HMAC-MD5-96 authentication level will be used. md5 may be utilized by entering one of the following:
    - `<auth password 8-16>` - An alphanumeric string of between 8 and 16 characters that will be used to authorize the agent to receive packets for the
create snmp user

- `<auth_key 32-32>` - Enter an alphanumeric string of exactly 32 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.
- `sha` - Specifies that the HMAC-SHA-96 authentication level will be used.
- `<auth_password 8-20>` - An alphanumeric string of between 8 and 20 characters that will be used to authorize the agent to receive packets for the host.
- `<auth_key 40-40>` - Enter an alphanumeric string of exactly 40 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.

`priv` – Adding the `priv` (privacy) parameter will allow for encryption in addition to the authentication algorithm for higher security. The user may choose:

- `des` – Adding this parameter will allow for a 56-bit encryption to be added using the DES-56 standard using:
  - `<priv_password 8-16>` - An alphanumeric string of between 8 and 16 characters that will be used to encrypt the contents of messages the host sends to the agent.
  - `<priv_key 32-32>` - Enter an alphanumeric key string of exactly 32 characters, in hex form, that will be used to encrypt the contents of messages the host sends to the agent.

- `none` – Adding this parameter will add no encryption.

Restrictions

- Only Administrator-level users can issue this command.

Example usage:

To create an SNMP user on the Switch:

```
DES-3528:5# create snmp user dlink default encrypted by_password auth md5 canadian priv none
Command: create snmp user dlink default encrypted by_password auth md5 canadian priv none
Success.

DES-3528:5#
```

delete snmp user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to remove an SNMP user from an SNMP group and also to delete the associated SNMP group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>delete snmp user &lt;user_name 32&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command removes an SNMP user from its SNMP group and then deletes the associated SNMP group.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;user_name 32&gt;</code> – An alphanumeric string of up to 32 characters that identifies the SNMP user that will be deleted.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>
Example usage:

To delete a previously entered SNMP user on the Switch:

```
DES-3528:5#delete snmp user dlink
Command: delete snmp user dlink
Success.
DES-3528:5#
```

### show snmp user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display information about each SNMP username in the SNMP group username table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show snmp user</td>
</tr>

<td>This command displays information about each SNMP username in the SNMP group username table.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the SNMP users currently configured on the Switch:

```
DES-3528:5#show snmp user
Command: show snmp user
Username     Group Name        VerAuthPriv
--------     -------------     -----------
initial       initial          V3 NoneNone
Total Entries: 1
DES-3528:5#
```

### create snmp view

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to assign views to community strings to limit which MIB objects and SNMP manager can access.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>create snmp view &lt;view_name 32&gt; &lt;oid&gt; view_type [included</td>
</tr>
<tr>
<td>Description</td>
<td>This command assigns views to community strings to limit which MIB objects an SNMP manager can access.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;view_name 32&gt; – An alphanumeric string of up to 32 characters that identifies the SNMP view that will be created.</td>
</tr>
<tr>
<td></td>
<td>&lt;oid&gt; – The object ID that identifies an object tree (MIB tree) that will be included or excluded from access by an SNMP manager.</td>
</tr>
<tr>
<td></td>
<td>view type – Sets the view type to be:</td>
</tr>
<tr>
<td></td>
<td>• included – Include this object in the list of objects that an SNMP manager can access.</td>
</tr>
<tr>
<td></td>
<td>• excluded – Exclude this object from the list of objects that an SNMP manager can access.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To create an SNMP view:

```
delete snmp view

Purpose: Used to remove an SNMP view entry previously created on the Switch.

Syntax: delete snmp view <view_name 32> [all | <oid>]

Description: This command is used to remove an SNMP view previously created on the Switch.

Parameters:
- `<view_name 32>` – An alphanumeric string of up to 32 characters that identifies the SNMP view to be deleted.
- `all` – Specifies that all of the SNMP views on the Switch will be deleted.
- `<oid>` – The object ID that identifies an object tree (MIB tree) that will be deleted from the Switch.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To delete a previously configured SNMP view from the Switch:

```
DES-3528:5# delete snmp view dlinkview all
Command: delete snmp view dlinkview all
Success.
DES-3528:5#
```
DES-3528:5# show snmp view

Command: show snmp view

<table>

DES-3528:5#

create snmp community

Purpose

Used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the agent on the Switch. One or more of the following characteristics can be associated with the community string:

- An Access List of IP addresses of SNMP managers that are permitted to use the community string to gain access to the Switch’s SNMP agent.
- An MIB view that defines the subset of all MIB objects that will be accessible to the SNMP community.
- 
  read_write or read_only level permission for the MIB objects accessible to the SNMP community.

Syntax

create snmp community <community_string 32> view <view_name 32> [read_only | read_write]

Description

This command is used to create an SNMP community string and to assign access-limiting characteristics to this community string.

Parameters

- <community_string 32> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch’s SNMP agent.
- view <view_name 32> – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.
- read_only – Specifies that SNMP community members using the community string created with this command can only read the contents of the MIBs on the Switch.
- read_write – Specifies that SNMP community members using the community string created with this command can read from and write to the contents of the MIBs on the Switch.

Restrictions

Only Administrator-level users can issue this command.

Example usage:

To create the SNMP community string “dlink:”
**delete snmp community**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to remove a specific SNMP community string from the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>delete snmp community</strong> <code>&lt;community_string 32&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to remove a previously defined SNMP community string from the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;community_string 32&gt;</code> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch’s SNMP agent.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete the SNMP community string “dlink”:

```
DES-3528:5#delete snmp community dlink
Command: delete snmp community dlink
Success.
DES-3528:5#
```

**show snmp community**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display SNMP community strings configured on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>show snmp community</strong> <code>&lt;community_string 32&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display SNMP community strings that are configured on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;community_string 32&gt;</code> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch’s SNMP agent.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the currently entered SNMP community strings:
DES-3528:5#show snmp community
Command: show snmp community

SNMP Community Table

<table>

### config snmp engineID

**Purpose**

Used to configure a name for the SNMP engine on the Switch.

**Syntax**

`config snmp engineID <snmp_engineID 10-64>`

**Description**

This command configures a name for the SNMP engine on the Switch.

**Parameters**

`<config snmp_engineID>` – An alphanumeric string that will be used to identify the SNMP engine on the Switch.

**Restrictions**

Only Administrator-level users can issue this command.

Example usage:

To give the SNMP agent on the Switch the name “0035636666”:

DES-3528:5#config snmp engineID 0035636666
Command: config snmp engineID 0035636666
Success.

DES-3528:5#

---

### show snmp engineID

**Purpose**

Used to display the identification of the SNMP engine on the Switch.

**Syntax**

`show snmp engineID`

**Description**

This command displays the identification of the SNMP engine on the Switch.

**Parameters**

None.

**Restrictions**

None.

Example usage:

To display the current name of the SNMP engine on the Switch:

DES-3528:5#show snmp engineID
Command: show snmp engineID

SNMP Engine ID : 0035636666

DES-3528:5#
## create snmp group

**Purpose**  
Used to create a new SNMP group, or a table that maps SNMP users to SNMP views.

**Syntax**  
```
create snmp group <groupname 32> [v1 | v2c | v3 [noauth_nopriv | auth_nopriv | auth_priv]] [read_view <view_name 32>] | write_view <view_name 32> | notify_view <view_name 32>](1)
```

**Description**  
This command creates a new SNMP group, or a table that maps SNMP users to SNMP views.

**Parameters**  
- `<groupname 32>` – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.
- `v1` – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.
- `v2c` – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.
- `v3` – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:
  - Message integrity – Ensures that packets have not been tampered with during transit.
  - Authentication – Determines if an SNMP message is from a valid source.
  - Encryption – Scrambles the contents of messages to prevent it being viewed by an unauthorized source.
- `noauth_nopriv` – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_nopriv` – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_priv` – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.
- `read_view` – Specifies that the SNMP group being created can request SNMP messages.
- `write_view` – Specifies that the SNMP group being created has write privileges.
- `notify_view` – Specifies that the SNMP group being created can receive SNMP trap messages generated by the Switch’s SNMP agent.
- `<view_name 32>` – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.

**Restrictions**  
- Only Administrator-level users can issue this command.

### Example usage:

To create an SNMP group named “sg1”:

```
DES-3528:5# create snmp group sg1 v3 noauth_nopriv read_view v1 write_view v1 notify_view v1
Command: create snmp group sg1 v3 noauth_nopriv read_view v1 write_view v1 notify_view v1
Success.
DES-3528:5#
```
### delete snmp group

**Purpose**  
Used to remove an SNMP group from the Switch.

**Syntax**  
`delete snmp group <groupname 32>`

**Description**  
This command is used to remove an SNMP group from the Switch.

**Parameters**  
`<groupname 32>` – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.

**Restrictions**  
Only Administrator-level users can issue this command.

#### Example usage:

To delete the SNMP group named “sg1”:

```
DES-3528:5#delete snmp group sg1
Command: delete snmp group sg1
Success.
DES-3528:5#
```

### show snmp groups

**Purpose**  
Used to display the group-names of SNMP groups currently configured on the Switch. The security model, level, and status of each group are also displayed.

**Syntax**  
`show snmp groups`

**Description**  
This command displays the group-names of SNMP groups currently configured on the Switch. The security model, level, and status of each group are also displayed.

**Parameters**  
None.

**Restrictions**  
None.

#### Example usage:

To display the currently configured SNMP groups on the Switch:

```
DES-3528:5#show snmp groups
```
<table>
<thead>
<tr>

Total Entries: 5
### create snmp host

**Purpose**
Used to create a recipient of SNMP traps generated by the Switch’s SNMP agent.

**Syntax**
```
create snmp host <ipaddr> [v1 | v2c | v3 [noauth_nopriv | auth_nopriv | auth_priv] ]
<auth_string 32>
```

**Description**
This command creates a recipient of SNMP traps generated by the Switch’s SNMP agent.

**Parameters**
- `<ipaddr>` – The IP address of the remote management station that will serve as the SNMP host for the Switch.
- `v1` – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.
- `v2c` – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.
- `v3` – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:
  - Message integrity – ensures that packets have not been tampered with during transit.
  - Authentication – determines if an SNMP message is from a valid source.
  - Encryption – scrambles the contents of messages to prevent it being viewed by an unauthorized source.
- `noauth_nopriv` – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_nopriv` – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_priv` – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.
- `<auth_string 32>` – An alphanumeric string used to authorize a remote SNMP manager to access the Switch’s SNMP agent.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To create an SNMP host to receive SNMP messages:

```
DES-3528:5# create snmp host 10.48.74.100 v3 auth_priv public
Command: create snmp host 10.48.74.100 v3 auth_priv public
Success.
DES-3528:5#
```

### delete snmp host

**Purpose**
Used to remove a recipient of SNMP traps generated by the Switch’s SNMP agent.

**Syntax**
delete snmp host <ipaddr>

**Description**
This command deletes a recipient of SNMP traps generated by the Switch’s SNMP agent.

**Parameters**
- `<ipaddr>` – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch’s SNMP agent.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To delete an SNMP host entry:

```
```
DES-3528:5#delete snmp host 10.48.74.100
Command: delete snmp host 10.48.74.100
Success.
DES-3528:5#

show snmp host

Purpose
Used to display the recipient of SNMP traps generated by the Switch’s SNMP agent.

Syntax
show snmp host {<ipaddr>}

Description
This command is used to display the IP addresses and configuration information of remote SNMP managers that are designated as recipients of SNMP traps that are generated by the Switch’s SNMP agent.

Parameters
- `<ipaddr>` – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch’s SNMP agent.

Restrictions
None.

Example usage:
To display the currently configured SNMP hosts on the Switch:

DES-3528:5#show snmp host
Command: show snmp host

SNMP Host Table

<table>
<thead>
<tr>
<th>Host IP Address</th>
<th>SNMP Version</th>
<th>Community Name/SNMPv3 User Name</th>
</tr>
</thead>

<tr>
<td>10.48.76.23</td>
<td>V2c</td>
<td>private</td>
</tr>
<tr>
<td>10.48.74.100</td>
<td>V3</td>
<td>authpriv</td>
</tr>
</tbody>
</table>

Total Entries: 2
DES-3528:5#

create trusted_host

Purpose
Used to create the trusted host.

Syntax
create trusted_host [ipaddr] [network <network_address>]

Description
This command creates the trusted host. The Switch allows users to specify up to four IP addresses that are allowed to manage the Switch via in-band SNMP or TELNET based management software. These IP addresses must be members of the Management VLAN. If no IP addresses are specified, then there is nothing to prevent any IP address from accessing the Switch, provided the user knows the Username and Password.

Parameters
- `<ipaddr>` – The IP address of the trusted host to be created.
- `<network_address>` – IP address and netmask of the trusted host to be created.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To create the trusted host:
create trusted_host network

**Purpose**
Used to create the trusted host.

**Syntax**
create trusted_host network <network_address>

**Description**
This command is used to create the trusted host.

**Parameters**
- `<network_address>` – IP address and netmask of the trusted host to be created.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To create the trusted host network.

```
DES-3528:5# create trusted_host network 10.62.32.1/16
Command: create trusted_host network 10.62.32.1/16
Success.
```

show trusted_host

**Purpose**
Used to display a list of trusted hosts entered on the Switch using the create trusted_host command above.

**Syntax**
show trusted_host

**Description**
This command a list of trusted hosts entered on the Switch using the create trusted_host command above.

**Parameters**
- `<network_address>` – the network address to show

**Restrictions**
None.

Example Usage:

To display the list of trust hosts:

```
DES-3528: 5# show trusted_host
Command: show trusted_host

Management Stations

IP Address/Netmask
-----------------
10.62.32.1/32
10.62.32.1/16

### delete trusted_host ipaddr

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to delete a trusted host entry made using the <code>create trusted_host</code> command above.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td><code>delete trusted_host ipaddr &lt;ipaddr&gt;</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is used to delete a trusted host entry made using the <code>create trusted_host</code> command above.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td><code>&lt;ipaddr&gt;</code> – The IP address of the trusted host.</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete a trusted host with an IP address 10.62.32.1:

```
DES-3528:5#delete trusted_host ipaddr 10.62.32.1
Command: delete trusted_host ipaddr 10.62.32.1
Success.
```

### delete trusted_host network

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to delete a trusted host entry made using the <code>create trusted_host network</code> command above.</th>
</tr>

<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td><code>delete trusted_host network &lt;network_address&gt;</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is used to delete a trusted host entry made using the <code>create trusted_host network</code> command above.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td><code>&lt;network_address&gt;</code> – IP address and netmask of the trusted host network.</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete a trusted host network IP address 10.62.31.1/16:

```
DES-3528:5#delete trusted_host network 10.62.32.1/16
Command: delete trusted_host network 10.62.32.1/16
Success.
```

### delete trusted_host all

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to delete all trusted host entries made using the <code>create trusted_host ipaddr</code> and <code>create trusted_host network</code> commands above.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td><code>delete trusted_host all</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is used to delete all trusted host entries made using the <code>create trusted_host ipaddr</code> and <code>create trusted_host network</code> commands above.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td>None.</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete all trusted host entries:

```
DES-3528: 5#delete trusted_host all
Command: delete trusted_host all
Success.
```
enable snmp traps

Purpose: Used to enable SNMP trap support.
Syntax: enable snmp traps
Description: This command is used to enable SNMP trap support on the Switch.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To enable SNMP trap support on the Switch:

DES-3528:5#enable snmp traps
Command: enable snmp traps
Success.
DES-3528:5#

enable snmp authenticate_traps

Purpose: Used to enable SNMP authentication trap support.
Syntax: enable snmp authenticate_traps
Description: This command is used to enable SNMP authentication trap support on the Switch.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To turn on SNMP authentication trap support:

DES-3528:5#enable snmp authenticate_traps
Command: enable snmp authenticate_traps
Success.
DES-3528:5#

show snmp traps

Purpose: Used to show SNMP trap support on the Switch.
Syntax: show snmp traps
Description: This command is used to view the SNMP trap support status currently configured on the Switch.
Parameters: None.
Restrictions: None.

Example usage:
To view the current SNMP trap support:
### disable snmp traps

**Purpose**
Used to disable SNMP trap support on the Switch.

**Syntax**
disable snmp traps

**Description**
This command is used to disable SNMP trap support on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To prevent SNMP traps from being sent from the Switch:

```
DES-3528:5#disable snmp traps
Command: disable snmp traps
Success.
DES-3528:5#
```
### config snmp system_contact

**Purpose**: Used to enter the name of a contact person who is responsible for the Switch.

**Syntax**: `config snmp system_contact <sw_contact>`

**Description**: This command is used to enter the name and/or other information to identify a contact person who is responsible for the Switch. A maximum of 255 characters can be used.

**Parameters**: `<sw_contact>` – A maximum of 255 characters is allowed. A NULL string is accepted if there is no contact.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

**Example usage**: To configure the Switch contact to “MIS Department II”:

```
DES-3528:5#config snmp system_contact MIS Department II
Command: config snmp system_contact MIS Department II
Success.
DES-3528:5#
```

### config snmp system_location

**Purpose**: Used to enter a description of the location of the Switch.

**Syntax**: `config snmp system_location <sw_location>`

**Description**: This command is used to enter a description of the location of the Switch. A maximum of 255 characters can be used.

**Parameters**: `<sw_location>` – A maximum of 255 characters is allowed. A NULL string is accepted if there is no location desired.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

**Example usage**: To configure the Switch location for “HQ 5F”:

```
DES-3528:5#config snmp system_location HQ 5F
Command: config snmp system_location HQ 5F
Success.
DES-3528:5#
```

### config snmp system_name

**Purpose**: Used to configure the name for the Switch.

**Syntax**: `config snmp system_name <sw_name>`

**Description**: This command configures the name of the Switch.

**Parameters**: `<sw_name>` – A maximum of 255 characters is allowed. A NULL string is accepted if no name is desired.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

**Example usage**: To configure the Switch name for “DES-3526 Switch”:

```
```
enable snmp

Purpose: Used to enable the SNMP interface access function.

Syntax: enable snmp

Description: This command is used to enable the SNMP function.

Parameters: None

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To enable snmp on the Switch:

DES-3528:5#enable snmp
Command: enable snmp
Success.

DES-3528:5#

disable snmp

Purpose: Used to disable the SNMP interface access function.

Syntax: disable snmp

Description: This command is used to disable the SNMP function. When the SNMP function is disabled, the network manager will not be able to access SNMP MIB objects. The device will not send traps or notifications to the network manager either.

Parameters: None

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To disable SNMP on the Switch:

DES-3528:5#disable snmp
Command: disable snmp
Success.

DES-3528:5#
The switch utility commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>download</td>
<td>[ firmware_fromTFTP &lt;ipaddr&gt; &lt;path_filename 64&gt; {image_id &lt;int 1-2&gt;} {unit [all</td>
</tr>
<tr>
<td>config firmware</td>
<td>{unit &lt;unit_id 1-8&gt;} image_id &lt;int 1-2&gt; [delete</td>
</tr>
<tr>
<td>show firmware_information</td>
<td></td>
</tr>
<tr>
<td>show config</td>
<td>[ current_config</td>
</tr>
<tr>
<td>upload</td>
<td>[ cfg_toTFTP &lt;ipaddr&gt; &lt;path_filename 64&gt; { &lt;config_id 1-2&gt;}</td>
</tr>
<tr>
<td>enable autoconfig</td>
<td></td>
</tr>
<tr>
<td>disable autoconfig</td>
<td></td>
</tr>
<tr>
<td>show autoconfig</td>
<td></td>
</tr>
<tr>
<td>config configuration</td>
<td>&lt;config_id 1-2&gt;[boot_up</td>
</tr>
<tr>
<td>ping</td>
<td>&lt;ipaddr&gt; {times &lt;value 1-255&gt;} {timeout &lt;sec 1-99&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**download**

**Purpose**

Used to download and install new firmware or a Switch configuration file from a TFTP server.

**Syntax**

download [ firmware_fromTFTP <ipaddr> <path_filename 64> {image_id <int 1-2>} {unit [all | <unitid 1-8]>} | cfg_fromTFTP <ipaddr> <path_filename 64> {[<config_id 1-2> | increment]} ]

**Description**

This command is used to download a new firmware or a Switch configuration file from a TFTP server.

**Parameters**

- `firmware_fromTFTP` – Download and install new firmware on the Switch from a TFTP server.
- `cfg_fromTFTP` – Download a switch configuration file from a TFTP server.
- `<ipaddr>` – The IP address of the TFTP server.
- `<path_filename>` – The DOS path and filename of the firmware or switch configuration file on the TFTP server. For example, C:\3528.had.
- `image_id <int 1-2>` – Specify the working section ID. The Switch can hold two firmware versions for the user to select from, which are specified by section ID.
- `unit` - Specifies which unit(s) on the stacking system can download and install new firmware from a TFTP server. If it is not specified, it refers to all the units. For example, unit 1-3.
- `config_id` - Specifies configuration ID in the system; If it is not specified, it refers to the boot up configuration ID.
- `increment` – Allows the download of a partial switch configuration file. This allows a file to be downloaded that will change only the switch parameters explicitly stated in the configuration file. All other switch parameters will remain unchanged.

**Restrictions**

The TFTP server must be on the same IP subnet as the Switch. Only Administrator-level users can issue this command.

Example usage:
To download a configuration file:

```
DES-3528:5#download cfg_fromTFTP 10.48.74.121 c:\cfg\setting.txt
Command: download cfg_fromTFTP 10.48.74.121 c:\cfg\setting.txt
Connecting to server................... Done.
Download configuration............... Done.

</tr>
</tbody>
</table>

'*' means boot up firmware
(R) means firmware update through Serial Port(RS232)
(T) means firmware update through TELNET
(S) means firmware update through SNMP
(W) means firmware update through WEB
(SSH) means firmware update through SSH
(SIM) means firmware update through Single IP Management

DES-3528:5#
### show config

**Purpose**
Used to display the current or saved version of the configuration settings of the switch.

**Syntax**
`show config [ current_config | config_in_nvr <config_id 1-2> | information]`

**Description**
This command is used to display all the configuration settings that are saved to NV RAM or display the configuration settings as they are currently configured. Use the keyboard to list settings one line at a time (Enter), one page at a time (Space) or view all (a).

The configuration settings are listed by category in the following order:

1. Basic (serial port, Telnet and web management status)
2. storm control
3. loop detect
4. SIM
5. syslog
6. QoS
7. port mirroring
8. traffic segmentation
9. SSL
10. port
11. SFLOW
12. OAM
13. port lock
14. SNMPv3
15. management (SNMP traps RMON)
16. vlan
17. Q-in-Q
18. RSPAN
19. 802.1x
20. ACL
21. POE
22. FDB (forwarding data base)
23. address binding
24. net bios
25. dhcp server screening
26. sRED
27. ARP spoofing prevention
28. PPPoE
29. MAC address table notification
30. STP
31. BPDU protection
32. safeguard
33. SSH
34. SNTP
35. LACP
36. IP
37. WAC
38. CFM
39. JWAC
40. LLDP
41. IGMP snooping
42. MBA
43. MLD vlan
44. multicast
45. multicast authentication
46. igmp snooping
47. mld snooping
48. access authentication control (TACACS etc.)
49. ARP
50. route
51. dns relay
52. dhcp server
53. dhcp relay

**Parameters**
- `current_config` – Entering this parameter will display configurations entered without being saved to NVRAM.
- `config_in_nvr <config_id 1-2>` – Entering this parameter will display configurations entered and saved to NVRAM.
- `information` – Entering this parameter will display the global information for the configuration settings.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

---

Example usage:

To view the current configuration settings:
DES-3528:5#show config current_config
Command: show config current_config

upload

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to upload the current switch settings or the switch history log to a TFTP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>upload [ cfg_toTFTP &lt;ipaddr&gt; &lt;path_filename 64&gt; { &lt;config_id 1-2&gt;}</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to upload either the Switch’s current settings or the Switch’s history log to a TFTP server.</td>
</tr>
<tr>
<td>Parameters</td>
<td>cfg_toTFTP – Specifies that the Switch’s current settings will be uploaded to the TFTP server.</td>
</tr>
<tr>
<td></td>
<td>log_toTFTP – Specifies that the switch history log will be uploaded to the TFTP server.</td>
</tr>
<tr>
<td></td>
<td>attack_log_toTFTP – Specifies that the switch attack log will be uploaded to the TFTP server.</td>
</tr>
<tr>
<td></td>
<td>&lt;ipaddr&gt; – The IP address of the TFTP server. The TFTP server must be on the same IP subnet as the Switch.</td>
</tr>
<tr>
<td></td>
<td>config_id - Specifies configuration ID in the system; If it is not specified, it refers to the boot up configuration ID.</td>
</tr>
<tr>
<td></td>
<td>unit - Specifies which switch unit’s attack log will be uploaded, if it is not specified, it refers to the master unit.</td>
</tr>
<tr>
<td></td>
<td>&lt;path_filename 64&gt; – Specifies the location of the Switch configuration file on the TFTP server. This file will be replaced by the uploaded file from the Switch.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>The TFTP server must be on the same IP subnet as the Switch. Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To upload a configuration file:
enable autoconfig

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to activate the autoconfiguration function for the Switch. This will load a previously saved configuration file for current use.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable autoconfig</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable autoconfig. When autoconfig is enabled on the Switch, the DHCP reply will contain a configuration file and path name. It will then request the file from the TFTP server specified in the reply. When autoconfig is enabled, the ipif settings will automatically become DHCP client.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>When autoconfig is enabled, the Switch becomes a DHCP client automatically (same as: <strong>config ipif System dhcp</strong>). The DHCP server must have the TFTP server IP address and configuration file name, and be configured to deliver this information in the data field of the DHCP reply packet. The TFTP server must be running and have the requested configuration file in its base directory when the request is received from the Switch. Consult the DHCP server and TFTP server software instructions for information on loading a configuration file. If the Switch is unable to complete the autoconfiguration process the previously saved local configuration file present in Switch memory will be loaded. Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**NOTE:** Dual-purpose (DHCP/TFTP) server utility software may require entry of the configuration file name and path within the user interface. Alternatively, the DHCP software may require creating a separate ext file with the configuration file name and path in a specific directory on the server. Consult the documentation for the DHCP server software if users are unsure.

Example usage:

To enable autoconfiguration on the Switch:

```
DES-3528:5#enable autoconfig
Command: enable autoconfig
Success.
DES-3528:5#
```

When autoconfig is enabled and the Switch is rebooted, the normal login screen will appear for a few moments while the autoconfig request (i.e. download configuration) is initiated. The console will then display the configuration parameters as they are loaded from the configuration file specified in the DHCP or TFTP server. This is exactly the same as using a **download configuration** command. After the entire Switch configuration is loaded, the Switch will automatically "logout" the server. The configuration settings will be saved automatically and become the active configuration.

Upon booting up the autoconfig process is initiated, the console screen will appear similar to the example below. The configuration settings will be loaded in normal order.
The very end of the autoconfig process including the logout appears like this:

```
DES-3528:5#disable authen_policy
Command: disable authen_policy
Success.
DES-3528:5#
DES-3528:5##---------------------------------------------------------------
DES-3528:5##          End of configuration file for DES-3528
DES-3528:5##---------------------------------------------------------------
DES-3528:5# Saving configurations and logs to NV-RAM...... Done.
**********
* Logout *
**********
```

**NOTE:** With autoconfig enabled, the Switch ipif settings now define the Switch as a DHCP client. Use the `show switch` command to display the new IP settings status.

### disable autoconfig

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Use to deactivate autoconfiguration from DHCP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable autoconfig</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable autoconfig. It instructs the Switch not to accept autoconfiguration instruction from the DHCP server. This does not change the IP settings of the Switch. The ipif settings will continue as DHCP client until changed with the <code>config ipif</code> command.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

```
To stop the autoconfiguration function:
```
DES-3528:5#disable autoconfig
Command: disable autoconfig
Success.

DES-3528:5#

### show autoconfig

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current autoconfig status of the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show autoconfig</td>
</tr>
<tr>
<td>Description</td>
<td>This command will list the current status of the autoconfiguration function.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

DES-3528:5#show autoconfig
Command: show autoconfig
Autoconfig State: Disabled.

DES-3528:5#

### config configuration

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete the specific firmware or configure the specific firmware as boot up image.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config configuration &lt;config_id 1-2&gt; [boot_up</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete the specific firmware or configure the specific firmware as boot up image.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;config_id 1-2&gt; – Specifies the serial number of the indicated configuration. boot_up – Specifies the config is boot_up config. delete – Delete the configuration. active – Active specifies the configuration.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>You must have Administrator-level privileges.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the specific configuration as boot up image:

DES-3528:5#config configuration 2 boot_up
Command: config configuration 2 boot_up
Success.
DES-3528:4#
**ping**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to test the connectivity between network devices.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>ping &lt;ipaddr&gt; {times &lt;value 1-255&gt;} {timeout &lt;sec 1-99&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command sends Internet Control Message Protocol (ICMP) echo messages to a remote IP address. The remote IP address will then “echo” or return the message. This is used to confirm connectivity between the Switch and the remote device.</td>
</tr>
</tbody>
</table>
| Parameters | `<ipaddr>` - Specifies the IP address of the host.  
`times <value 1-255>` - The number of individual ICMP echo messages to be sent. A value of 0 will send an infinite ICMP echo messages. The maximum value is 255. The default is 0.  
`timeout <sec 1-99>` - Defines the time-out period while waiting for a response from the remote device. A value of 1 to 99 seconds can be specified. The default is 1 second |
| Restrictions | None. |

Example usage:

To ping the IP address 10.48.74.121 four times:

```
DES-3528:5# ping 10.48.74.121 times 4
Command: ping 10.48.74.121

Reply from 10.48.74.121, time<10ms
Reply from 10.48.74.121, time<10ms
Reply from 10.48.74.121, time<10ms
Reply from 10.48.74.121, time<10ms

Ping statistics for 10.48.74.121
Packets: Sent =4, Received =4, Lost =0

DES-3528:5#
```
# NETWORK MONITORING COMMANDS

The network monitoring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>show packet ports</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>show error ports</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>show utilization</td>
<td>[cpu</td>
</tr>
<tr>
<td>clear counters</td>
<td>{ports &lt;portlist&gt;}</td>
</tr>
<tr>
<td>clear log</td>
<td></td>
</tr>
<tr>
<td>show log</td>
<td>{index &lt;value_list}&gt;</td>
</tr>
<tr>
<td>enable syslog</td>
<td></td>
</tr>
<tr>
<td>disable syslog</td>
<td></td>
</tr>
<tr>
<td>show syslog</td>
<td></td>
</tr>
<tr>
<td>create syslog host</td>
<td>&lt;index 1-4&gt; {severity [informational</td>
</tr>
<tr>
<td>config syslog host</td>
<td>[all</td>
</tr>
<tr>
<td>delete syslog host</td>
<td>[&lt;index 1-4&gt;</td>
</tr>
<tr>
<td>show syslog host</td>
<td>{&lt;index 1-4&gt;}</td>
</tr>
<tr>
<td>config log_save_timing</td>
<td>[time_interval &lt;min 1-65535&gt;</td>
</tr>
<tr>
<td>show log_save_timing</td>
<td></td>
</tr>
<tr>
<td>show attack_log</td>
<td>{unit &lt;unit_id 1-8&gt;} {index &lt;value_list&gt;}</td>
</tr>
<tr>
<td>clear attack_log</td>
<td>{unit &lt;unit_id 1-8&gt;}</td>
</tr>
<tr>
<td>config system_severity</td>
<td>[trap</td>
</tr>
<tr>
<td>show system_severity</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

## show packet ports

**Purpose**

Used to display statistics about the packets sent and received by the Switch.

**Syntax**

```
show packet ports <portlist>
```

**Description**

This command is used to display statistics about packets sent and received by ports specified in the `<portlist>`.

**Parameters**

- `<portlist>` – Specifies a port or range of ports to be displayed.

**Restrictions**

- None.

**Example usage:**

To display the packets analysis for port 7 of module 2:
DES-3528:5#show packet port 2
Command: show packet port 2

Port Number : 2

<table>
<thead>
<tr>
<th>Frame Size/Type</th>
<th>Frame Counts</th>
<th>Frames/sec</th>

show error ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the error statistics for a range of ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show error ports &lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display all of the packet error statistics collected and logged by the Switch for a given port list.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;portlist&gt; – Specifies a port or range of ports to be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the errors of the port 3 of module 1:
show error ports 3

Port Number : 3

<table>
<thead>
<tr>

show utilization

**Purpose**: Used to display real-time port and CPU utilization statistics.

**Syntax**: `show utilization [cpu | ports <portlist>]`

**Description**: This command will display the real-time port and CPU utilization statistics for the Switch.

**Parameters**
- `cpu` – Entering this parameter will display the current cpu utilization of the Switch.
- `ports` – Entering this parameter will display the current port utilization of the Switch.
  - `<portlist>` – Specifies a port or range of ports to be displayed.

**Restrictions**: None.

Example usage:

To display the port utilization statistics:
DES-3528:5# show utilization ports
Command: show utilization ports

<table>
<thead>
<tr>
<th>Port</th>
<th>TX/sec</th>
<th>RX/sec</th>
<th>Util</th>
<th>Port</th>
<th>TX/sec</th>

To display the current CPU utilization:

DES-3528:5# show utilization cpu
Command: show utilization cpu

CPU utilization:

---
Five seconds - 15% One minute - 25% Five minutes - 14%
---

DES-3528:5#

clear counters

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to clear the Switch’s statistics counters.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>clear counters {ports &lt;portlist&gt;}</td>
</tr>
<tr>
<td>Description</td>
<td>This command will clear the counters used by the Switch to compile statistics.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;portlist&gt; – Specifies a port or range of ports to be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To clear the counters:
DES-3528:5#clear counters ports 2-9
Command: clear counters ports 2-9
Success.
DES-3528:5#

### clear log

**Purpose**
Used to clear the Switch’s history log.

**Syntax**
clear log

**Description**
This command will clear the Switch’s history log.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To clear the log information:

DES-3528:5#clear log
Command: clear log
Success.
DES-3528:5#

### show log

**Purpose**
Used to display the Switch’s history log.

**Syntax**
show log {index <value_list>}

**Description**
This command will display the contents of the Switch’s history log.

**Parameters**
index <value_list> – This parameter specifies the range of log index to show. For example, show log index 1-5 will display the history log from 1 to 5.
If no parameter is specified, all history log entries will be displayed.

**Restrictions**
None.

**Example usage:**
To display the Switch’s history log:

DES-3528:5#show log index 1-5
Command: show log index 1-5

<table>
<thead>
<tr>
<th>Index</th>
<th>Time</th>
<th>Log Text</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>00000 days 00:01:09</td>
<td>Successful login through Console (Username: Anonymous)</td>
</tr>
<tr>
<td>4</td>
<td>00000 days 00:00:14</td>
<td>System started up</td>
</tr>
<tr>
<td>3</td>
<td>00000 days 00:00:06</td>
<td>Port 1 link up, 100Mbps FULL duplex</td>
</tr>
<tr>
<td>2</td>
<td>00000 days 00:00:01</td>
<td>Spanning Tree Protocol is disabled</td>
</tr>
<tr>
<td>1</td>
<td>00000 days 00:06:31</td>
<td>Configuration saved to flash (Username: Anonymous)</td>
</tr>
</tbody>
</table>

DES-3528:5#
NOTE: For detailed information regarding Log entries that will appear in this window, please refer to Appendix C at the back of the xStack DES-3528 Layer 2 Stackable Fast Ethernet Managed Switch User Manual.

### enable syslog

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable the system log to be sent to a remote host.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable syslog</td>
</tr>
<tr>
<td>Description</td>
<td>This command enables the system log to be sent to a remote host.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To the Syslog function on the Switch:

```
DES-3528:5#enable syslog
Command: enable syslog
Success.
DES-3528:5#
```

### disable syslog

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the system log to be sent to a remote host.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable syslog</td>
</tr>
<tr>
<td>Description</td>
<td>This command disables the system log to be sent to a remote host.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the syslog function on the Switch:

```
DES-3528:5#disable syslog
Command: disable syslog
Success.
DES-3528:5#
```

### show syslog

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the syslog protocol status as enabled or disabled.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show syslog</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the syslog status as enabled or disabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the current status of the syslog function:
create syslog host

Purpose
Used to create a new syslog host.

Syntax
create syslog host <index 1-4> {severity [informational | warning | all] | facility[local0 | local1 | local2 | local3 | local4 | local5 | local6 | local7] |udp_port <udp_port_number> | ipaddress <ipaddr> | state [enable | disable]}

Description
This command is used to create a new syslog host.

Parameters
- `<index 1-4>` – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.
- `ipaddress <ipaddr>` – Specifies the IP address of the remote host where syslog messages will be sent.
- `severity` – Severity level indicator. These are described in the following:
  - Bold font indicates that the corresponding severity level is currently supported on the Switch.

<table>

</tbody>
</table>
create syslog host

local0 – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.
local1 – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.
local2 – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.
local3 – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.
local4 – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.
local5 – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.
local6 – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.
local7 – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.

udp_port <udp_port_number> – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.
state [enable | disable] – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To create a Syslog host:

DES-3528:5# create syslog host 1 severity all facility local0 ipaddress 1.1.1.1

Command: create syslog host 1 severity all facility local0 ipaddress 1.1.1.1

Success.

DES-3528:5#

config syslog host

Purpose
Used to configure the syslog protocol to send system log data to a remote host.

Syntax
config syslog host [all | <index 1-4>] {severity [informational | warning | all] | facility [local0 | local1 | local2 | local3 | local4 | local5 | local6 | local7] | udp_port <udp_port_number> | ipaddress <ipaddr> | state [enable | disable]

Description
This command is used to configure the syslog protocol to send system log information to a remote host.

Parameters

<index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.
ipaddress <ipaddr> – Specifies the IP address of the remote host where syslog messages will be sent.
severity – Severity level indicator. These are described in the following:

<table>
<thead>
<tr>
<th>Numerical Code</th>
<th>Severity</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Critical</td>
</tr>
<tr>
<td>1</td>
<td>Error</td>
</tr>
<tr>
<td>2</td>
<td>Warning</td>
</tr>
<tr>
<td>3</td>
<td>Notice</td>
</tr>
<tr>
<td>4</td>
<td>Informational</td>
</tr>
<tr>
<td>5</td>
<td>Debug</td>
</tr>
</tbody>
</table>

Bold font indicates that the corresponding severity level is currently supported on the Switch.
config syslog host

<table>
<thead>
<tr>
<th>Numerical Code</th>
<th>Facility</th>
<th>Numerical Code</th>
<th>Facility</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>

</tr>
<tr>
<td>11</td>
<td>FTP daemon</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

informational – Specifies that informational messages will be sent to the remote host. This corresponds to number 6 from the list above.

warning – Specifies that warning messages will be sent to the remote host. This corresponds to number 4 from the list above.

all – Specifies that all of the currently supported syslog messages that are generated by the Switch will be sent to the remote host.

facility – Some of the operating system daemons and processes have been assigned Facility values. Processes and daemons that have not been explicitly assigned a Facility may use any of the "local use" facilities or they may use the "user-level" Facility. Those Facilities that have been designated are shown in the following: Bold font indicates the facility values the Switch currently supports.
config syslog host

local0 – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.

local1 – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.

local2 – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.

local3 – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.

local4 – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.

local5 – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.

local6 – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.

local7 – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.

udp_port <udp_port_number> – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.

state [enable | disable] – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure a Syslog host:

```
DES-3528:5#config syslog host 1 severity all
Command: config syslog host 1 severity all
Success.

DES-3528:5#
```

Example usage:
To configure a syslog host for all hosts:

```
DES-3528:5#config syslog host all severity all
Command: config syslog host all severity all
Success.

DES-3528:5#
```
**delete syslog host**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to remove a syslog host that has been previously configured, from the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`delete syslog host [&lt;index 1-4&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to remove a syslog host that has been previously configured from the Switch.</td>

DES-3528:5#

**config log_save_timing**

**Purpose**: Used to configure the method to save log.

**Syntax**: `config log_save_timing [time_interval <min 1-65535> | on_demand | log_trigger]`

**Description**: This command is used to set the method to save log.

**Parameters**:
- `time_interval` – save log to flash every xxx minutes. (if no log happen in this period, don't save)
- `on_demand` – save log to flash whenever user type "save log" or "save all". This is also the default.
- `log_trigger` – save log to flash whenever log arrives

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To configure `log_save_timing`:

```
DES-3528:5# config log_save_timing on_demand
Command: config log_save_timing on_demand
Success.
DES-3528:5#
```

**show log_save_timing**

**Purpose**: Used to show the timing method to save log.

**Syntax**: `show log_save_timing`

**Description**: This command is used to show method to save log.

**Parameters**: None.

**Restrictions**: None.

Example usage:

To show `log_save_timing`:

```
DES-3528:5# show log_save_timing
```

76
show attack_log

Purpose: Used to show dangerous log messages.
Syntax: `show attack_log {unit <unit_id 1-8>} {index <value_list>}`
Description: This command is used to show content of dangerous log messages.
Parameters:
- `unit`: Specifies the unit of which the attack_log will be show. If it is not specified, it refers to the master unit.
- `value_list X-Y`: The show log command will display the dangerous log messages between the log number of X and Y. For example, show dangerous log index 1-5 will display the dangerous log messages from 1 to 5.
  If no parameter specified, all dangerous log entries will be displayed.

Restrictions: None.

Example usage:
To show dangerous messages on master:

```
DES-3528:5# show attack_log
Command: show attack_log

Index  Time                Log Text
----  ---------------      -----------------------
2     00000 days 01:25:43  Possible spoofing attack from 000d01002301 port 6:3
1     00000 days 01:25:43  Possible spoofing attack from 000d01002301 port 6:3
```

clear attack_log

Purpose: Used to clear the Switch’s dangerous log.
Syntax: `clear attack_log {unit <unit_id 1-8>}`
Description: This command clears the Switch’s dangerous log.
Parameters:
- `unit`: Specifies the unit of which the attack_log will be cleared. If it is not specified, it refers to the master unit.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To clear the master’s dangerous log:

```
DES-3528:5# clear attack_log
Command: clear attack_log
Success.
```

DES-3528:5#
### config system_severity

**Purpose**
Used to configure system_severity level of an alert required for log entry or trap message.

**Syntax**
```
config system_severity [trap | log | all] [critical | warning | information]
```

**Description**
This command is used to configure the system_severity levels on the Switch. When an event occurs on the Switch, a message will be sent to the SNMP agent (trap), the Switch's log or both. Events occurring on the Switch are separated into three main categories, these categories are NOT precisely the same as the parameters of the same name (see below).

- **Information** – Events classified as information are basic events occurring on the Switch that are not deemed as problematic, such as enabling or disabling various functions on the Switch.
- **Warning** – Events classified as warning are problematic events that are not critical to the overall function of the Switch but do require attention, such as unsuccessful downloads or uploads and failed logins.
- **Critical** – Events classified as critical are fatal exceptions occurring on the Switch, such as hardware failures or spoofing attacks.

**Parameters**
Choose one of the following to identify where severity messages are to be sent.

- **trap** – Entering this parameter will define which events occurring on the Switch will be sent to a SNMP agent for analysis.
- **log** – Entering this parameter will define which events occurring on the Switch will be sent to the Switch's log for analysis.
- **all** – Entering this parameter will define which events occurring on the Switch will be sent to a SNMP agent and the Switch's log for analysis.

Choose one of the following to identify what level of severity warnings are to be sent to the destination entered above.

- **critical** – Entering this parameter along with the proper destination, stated above, will instruct the Switch to send only critical events to the Switch's log or SNMP agent.
- **warning** – Entering this parameter along with the proper destination, stated above, will instruct the Switch to send critical and warning events to the Switch's log or SNMP agent.
- **information** – Entering this parameter along with the proper destination, stated above, will instruct the switch to send informational, warning and critical events to the Switch's log or SNMP agent.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure the system severity settings:

```
DES-3528:5#config system_severity trap critical
Command: config system_severity trap critical
Success.
DES-3528:5#
```

### show system_severity

**Purpose**
Used to display system_severity level of an alert required for log entry or trap message.

**Syntax**
```
show system_severity
```

**Description**
This command is used to display system_severity level of an alert required for log entry or trap message.

**Parameters**
None.

**Restrictions**
None.

**Example usage:**
To display the system severity settings for critical traps and log:
DES-3528:5# show system_severity
Command: show system_severity

System Severity Trap: information
System Severity Log: information

DES-3528:5#
MULTIPLE SPANNING TREE PROTOCOL (MSTP) COMMANDS

This Switch supports three versions of the Spanning Tree Protocol: 802.1D STP, 802.1w Rapid STP and 802.1s MSTP. Multiple Spanning Tree Protocol, or MSTP, is a standard defined by the IEEE community that allows multiple VLANs to be mapped to a single spanning tree instance, which will provide multiple pathways across the network. Therefore, these MSTP configurations will balance the traffic load, preventing wide scale disruptions when a single spanning tree instance fails. This will allow for faster convergences of new topologies for the failed instance. Frames designated for these VLANs will be processed quickly and completely throughout interconnected bridges utilizing either of the three spanning tree protocols (STP, RSTP or MSTP). This protocol will also tag BDPU packets so receiving devices can distinguish spanning tree instances, spanning tree regions and the VLANs associated with them. These instances will be classified by an instance_id. MSTP will connect multiple spanning trees with a Common and Internal Spanning Tree (CIST). The CIST will automatically determine each MSTP region, its maximum possible extent and will appear as one virtual bridge that runs a single spanning tree. Consequently, frames assigned to different VLANs will follow different data routes within administratively established regions on the network, continuing to allow simple and full processing of frames, regardless of administrative errors in defining VLANs and their respective spanning trees. Each switch utilizing the MSTP on a network will have a single MSTP configuration that will have the following three attributes:

a) A configuration name defined by an alphanumeric string of up to 32 characters (defined in the config stp mst_config_id command as name <string>).

b) A configuration revision number (named here as a revision_level) and;

c) A 4096 element table (defined here as a vid_range) which will associate each of the possible 4096 VLANs supported by the Switch for a given instance.

To utilize the MSTP function on the Switch, three steps need to be taken:

a) The Switch must be set to the MSTP setting (config stp version)

b) The correct spanning tree priority for the MSTP instance must be entered (config stp priority).

c) VLANs that will be shared must be added to the MSTP Instance ID (config stp instance_id).

The Multiple Spanning Tree Protocol commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable stp</td>
<td>[mstp</td>
</tr>
<tr>
<td>disable stp</td>
<td></td>
</tr>
<tr>
<td>config stp version</td>
<td>[maxage &lt;value 6-40&gt;</td>
</tr>
<tr>
<td>create stp instance_id</td>
<td>&lt;value 1-15&gt;</td>
</tr>
<tr>
<td>config stp instance_id</td>
<td>&lt;value 1-15&gt; [add_vlan</td>
</tr>
<tr>
<td>delete stp instance_id</td>
<td>&lt;value 1-15&gt;</td>
</tr>
<tr>
<td>config stp priority</td>
<td>&lt;value 0-61440&gt; instance_id &lt;value 0-15&gt;</td>
</tr>
<tr>
<td>config stp mst_config_id</td>
<td>{revision_level &lt;int 0-65535&gt;</td>
</tr>
<tr>
<td>config stp mst_ports</td>
<td>&lt;portlist&gt; instance_id &lt;value 0-15&gt; {internalCost [auto</td>
</tr>
<tr>
<td>show stp</td>
<td></td>
</tr>
<tr>
<td>show stp ports</td>
<td>&lt;portlist&gt;</td>
</tr>
</tbody>
</table>
Command | Parameters
---|---
show stp instance | <value 0-15>
config stp nni_bpdu_addr | [dot1d | dot1ad]
show stp mst_config_id

Each command is listed, in detail, in the following sections.

### enable stp

**Purpose**
Used to globally enable STP on the Switch.

**Syntax**
```
enable stp
```

**Description**
This command allows the Spanning Tree Protocol to be globally enabled on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To enable STP, globally, on the Switch:

```
DES-3528:5#enable stp
Command: enable stp
Success.
DES-3528:5#
```

### disable stp

**Purpose**
Used to globally disable STP on the Switch.

**Syntax**
```
disable stp
```

**Description**
This command allows the Spanning Tree Protocol to be globally disabled on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To disable STP on the Switch:

```
DES-3528:5#disable stp
Command: disable stp
Success.
DES-3528:5#
```
config stp version

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to globally set the version of STP on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config stp version [mstp</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the user to choose the version of the spanning tree to be implemented on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td></td>
</tr>
<tr>
<td><code>mstp</code></td>
<td>Selecting this parameter will set the Multiple Spanning Tree Protocol (MSTP) globally on the Switch.</td>
</tr>
<tr>
<td><code>rstp</code></td>
<td>Selecting this parameter will set the Rapid Spanning Tree Protocol (RSTP) globally on the Switch.</td>
</tr>
<tr>
<td><code>stp</code></td>
<td>Selecting this parameter will set the Spanning Tree Protocol (STP) globally on the Switch.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To set the Switch globally for the Multiple Spanning Tree Protocol (MSTP):

```
DES-3528:5#config stp version mstp
Command: config stp version mstp
Success
DES-3528:5#
```
<table>
<thead>
<tr>
<th><strong>config stp</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
<td>Used to setup STP, RSTP and MSTP on the Switch.</td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
<td><strong>config stp</strong> {maxage &lt;value 6-40&gt;</td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is used to setup the Spanning Tree Protocol (STP) for the entire Switch. All commands here will be implemented for the STP version that is currently set on the Switch.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td></td>
</tr>
<tr>
<td>maxage &lt;value 6-40&gt;</td>
<td>This value may be set to ensure that old information does not endlessly circulate through redundant paths in the network, preventing the effective propagation of the new information. Set by the Root Bridge, this value will aid in determining that the Switch has spanning tree configuration values consistent with other devices on the bridged LAN. If the value ages out and a BPDU has still not been received from the Root Bridge, the Switch will start sending its own BPDU to all other switches for permission to become the Root Bridge. If it turns out that your switch has the lowest Bridge Identifier, it will become the Root Bridge. The user may choose a time between 6 and 40 seconds. The default value is 20.</td>
</tr>
<tr>
<td>maxhops &lt;value 6-40&gt;</td>
<td>The number of hops between devices in a spanning tree region before the BPDU (bridge protocol data unit) packet sent by the Switch will be discarded. Each switch on the hop count will reduce the hop count by one until the value reaches zero. The Switch will then discard the BDPU packet and the information held for the port will age out. The user may set a hop count from 6 to 40. The default is 20.</td>
</tr>
<tr>
<td>hellotime &lt;value 1-2&gt;</td>
<td>The user may set the time interval between transmission of configuration messages by the root device, thus stating that the Switch is still functioning. A time between 1 and 2 seconds may be chosen, with a default setting of 2 seconds.</td>
</tr>
<tr>
<td>forwarddelay &lt;value 4-30&gt;</td>
<td>The maximum amount of time (in seconds) that the root device will wait before changing states. The user may choose a time between 4 and 30 seconds. The default is 15 seconds.</td>
</tr>
<tr>
<td>txholdcount &lt;value 1-10&gt;</td>
<td>The maximum number of BPDU Hello packets transmitted per interval. Default value is 6.</td>
</tr>
<tr>
<td>fbpdut [enable</td>
<td>disable]</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To configure STP with maxage 18 and maxhops of 15:

```
DES-3528:5#config stp maxage 18 maxhops 15
Command: config stp maxage 18 maxhops 15
Success.
```

DES-3528:5#
**config stp ports**

**Purpose**
Used to setup STP on the port level.

**Syntax**
```
```

**Description**
This command is used to create and configure STP for a group of ports.

**Parameters**

- `<portlist>` – Specifies a range of ports to be configured.
- `externalCost` – This defines a metric that indicates the relative cost of forwarding packets to the specified port list. Port cost can be set automatically or as a metric value. The default value is `auto`.
  - `auto` – Setting this parameter for the external cost will automatically set the speed for forwarding packets to the specified port(s) in the list for optimal efficiency. Default port cost: 100Mbps port = 200000. Gigabit port = 20000.
  - `<value 1-200000000>` – Define a value between 1 and 200000000 to determine the external cost. The lower the number, the greater the probability the port will be chosen to forward packets.
- `hellotime <value 1-2>` – The time interval between transmission of configuration messages by the designated port, to other devices on the bridged LAN, thus stating that the Switch is still functioning. The user may choose a time between 1 and 2 seconds. The default is 2 seconds.
- `migrate [yes | no ]` – Setting this parameter as "yes" will set the ports to send out BDPU packets to other bridges, requesting information on their STP setting. If the Switch is configured for RSTP, the port will be capable to migrate from 802.1D STP to 802.1w RSTP. If the Switch is configured for MSTP, the port is capable of migrating from 802.1D STP to 802.1s MSTP. RSTP and MSTP can coexist with standard STP, however the benefits of RSTP and MSTP are not realized on a port where an 802.1D network connects to an 802.1w or 802.1s enabled network. Migration should be set as `yes` on ports connected to network stations or segments that are capable of being upgraded to 802.1w RSTP or 802.1s MSTP on all or some portion of the segment.
- `edge [true | false | auto ]` – `true` designates the port as an edge port. Edge ports cannot create loops, however an edge port can lose edge port status if a topology change creates a potential for a loop. An edge port normally should not receive BPDU packets. If a BPDU packet is received it automatically loses edge port status. `false` indicates that the port does not have edge port status.
  - `auto` – Indicates that the port will be able to automatically enable the edge port status if this port links to an end station or a device that does not support the STP function.
- `restricted_role [true | false ]` – If `true` causes the Port not to be selected as Root Port for the CIST or any MSTI, even it has the best spanning tree priority vector. Such a Port will be selected as an Alternate Port after the Root Port has been selected. This parameter should be `false` by default. If set, it can cause lack of spanning tree connectivity. It is set by a network administrator to prevent bridges external to a core region of the network influencing the spanning tree active topology, possibly because those bridges are not under the full control of the administrator.
- `restricted_tcn [true | false ]` – If `true` causes the Port not to propagate received topology change notifications and topology changes to other Ports. This parameter should be `false` by default. If set it can cause temporary loss of connectivity after changes in a spanning trees active topology as a result of persistent incorrectly learned station location information. It is set by a network administrator to prevent bridges external to a core region of the network, causing address flushing in that region, possibly because those bridges are not under the full control of the administrator or MAC_Operational for the attached LANs transitions frequently.
- `p2p [true | false | auto ]` – `true` indicates a point-to-point (P2P) shared link. P2P ports are similar to edge ports however they are restricted in that a P2P port must operate in full-duplex. Like edge ports, P2P ports transition to a forwarding state rapidly thus benefiting from RSTP. A p2p value of `false` indicates that the port cannot have p2p status. `Auto` allows the port to have p2p status whenever possible and operate as if the p2p status were `true`. If the port cannot maintain this status (for example if the port is forced to half-duplex operation) the p2p status changes to operate as if the p2p value were `false`. The default setting for this
config stp ports

<table>
<thead>
<tr>
<th>parameter is auto.</th>
</tr>
</thead>
<tbody>
<tr>
<td>state [enable</td>
</tr>
</tbody>
</table>

Restrictions

Only Administrator and Operator-level users can issue this command.

Example usage:

To configure STP with path cost 19, hellotime set to 2 seconds, migration enabled, and state enabled for ports 1-5 of module 1:

```
DES-3528:5# config stp ports 1-5 externalCost 19 hellotime 2 migrate yes state enable
Command: config stp ports 1-5 externalCost 19 hellotime 2 migrate yes state enable
Success.
DES-3528:5#
```

create stp instance_id

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create a STP instance ID for MSTP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>create stp instance_id &lt;value 1-15&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the user to create a STP instance ID for the Multiple Spanning Tree Protocol. There are 16 STP instances on the Switch (one internal CIST, unchangeable) and the user may create up to 15 instance IDs for the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;value 1-15&gt; – Enter a value between 1 and 15 to identify the Spanning Tree instance on the Switch.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To create a spanning tree instance 2:

```
DES-3528:5# create stp instance_id 2
Command: create stp instance_id 2
Warning: There is no VLAN mapping to this instance_id!
Success.
DES-3528:5#
```
### config stp instance_id

**Purpose**
Used to add or delete VID to/from an STP instance.

**Syntax**
`config stp instance_id <value 1-15> [add_vlan | remove_vlan] <vidlist>`

**Description**
This command is used to map VIDs (VLAN IDs) to previously configured STP instances on the Switch by creating an `instance_id`. A STP instance may have multiple members with the same MSTP configuration. There is no limit to the number of STP regions in a network but each region only supports a maximum of 16 spanning tree instances (one unchangeable default entry). VIDs can belong to only one spanning tree instance at a time.

**Parameters**
- `<value 1-15>` – Enter a number between 1 and 15 to define the `instance_id`. The Switch supports 16 STP instances with one unchangeable default instance ID set as 0.
- `add_vlan` – Along with the `vid_range <vidlist>` parameter, this command will add VIDs to the previously configured STP `instance_id`.
- `remove_vlan` – Along with the `vid_range <vidlist>` parameter, this command will remove VIDs to the previously configured STP `instance_id`.
- `<vidlist>` – Specify the VID range from configured VLANs set on the Switch. Supported VIDs on the Switch range from ID number 1 to 4094.

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure instance ID 2 to add VID 10:

```
DES-3528:5#config stp instance_id 2 add_vlan 10
Command : config stp instance_id 2 add_vlan 10
Success.
DES-3528:5#
```

To remove VID 10 from instance ID 2:

```
DES-3528:5#config stp instance_id 2 remove_vlan 10
Command : config stp instance_id 2 remove_vlan 10
Success.
DES-3528:5#
```

### delete stp instance_id

**Purpose**
Used to delete a STP instance ID from the Switch.

**Syntax**
`delete stp instance_id <value 1-15>`

**Description**
This command allows the user to delete a previously configured STP instance ID from the Switch.

**Parameters**
- `<value 1-15>` – Enter a value between 1 and 15 to identify the Spanning Tree instance on the Switch.

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete STP instance ID 2 from the Switch.
DES-3528:5#delete stp instance_id 2
Command: delete stp instance_id 2
Success.
DES-3528:5#

**config stp priority**

**Purpose**
Used to configure the bridge priority.

**Syntax**
config stp priority <value 0-61440> instance_id <value 0-15>

**Description**
This command is used to update the STP instance configuration settings on the Switch. The MSTP will utilize the priority in selecting the root bridge, root port and designated port. Assigning higher priorities to STP regions will instruct the Switch to give precedence to the selected instance_id for forwarding packets. The lower the priority value set, the higher the priority.

**Parameters**
- priority <value 0-61440> – Select a value between 0 and 61440 to specify the priority for a specified instance ID for forwarding packets. The lower the value, the higher the priority. This value must be divisible by 4096.
- instance_id <value 0-15> – Enter the value corresponding to the previously configured instance ID of which the user wishes to set the priority value. An instance id of 0 denotes the default instance_id (CIST) internally set on the Switch.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To set the priority value for instance_id 2 as 4096.

DES-3528:5#config stp priority 4096 instance_id 2
Command : config stp priority 4096 instance_id 2
Success.
DES-3528:5#

**config stp mst_config_id**

**Purpose**
Used to update the MSTP configuration identification.

**Syntax**
config stp mst_config_id {revision_level <int 0-65535> | name <string 32>}(1)

**Description**
This command will uniquely identify the MSTP configuration currently configured on the Switch. Information entered here will be attached to BPDU packets as an identifier for the MSTP region to which it belongs. Switches having the same revision_level and name will be considered as part of the same MSTP region.

**Parameters**
- revision_level <int 0-65535> — Enter a number between 0 and 65535 to identify the MSTP region. This value, along with the name will identify the MSTP region configured on the Switch. The default setting is 0.
- name <string> — Enter an alphanumeric string of up to 32 characters to uniquely identify the MSTP region on the Switch. This name, along with the revision_level value will identify the MSTP region configured on the Switch. If no name is entered, the default name will be the MAC address of the device.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the MSTP region of the Switch with revision_level 10 and the name “Trinity”: 
config stp mst_ports

### Purpose
Used to update the port configuration for a MSTP instance.

### Syntax
config stp mst_ports <portlist> instance_id <value 0-15> {internalCost [auto | <value 1-200000000>] priority <value 0-240>}(1)

### Description
This command will update the port configuration for a STP instance_id. If a loop occurs, the MSTP function will use the port priority to select an interface to put into the forwarding state. Set a higher priority value for interfaces to be selected for forwarding first. In instances where the priority value is identical, the MSTP function will implement the lowest MAC address into the forwarding state and other interfaces will be blocked. Remember that lower priority values mean higher priorities for forwarding packets.

### Parameters
- **<portlist>** – Specifies a port or range of ports to be configured.
- **instance_id <value 0-15>** – Enter a numerical value between 0 and 15 to identify the instance_id previously configured on the Switch. An entry of 0 will denote the CIST (Common and Internal Spanning Tree).
- **internalCost** – This parameter is set to represent the relative cost of forwarding packets to specified ports when an interface is selected within a STP instance. The default setting is auto. There are two options:
  - **auto** – Selecting this parameter for the internalCost will set quickest route automatically and optimally for an interface. The default value is derived from the media speed of the interface.
  - **value 1-200000000** – Selecting this parameter with a value in the range of 1-200000000 will set the quickest route when a loop occurs. A lower internalCost represents a quicker transmission.
- **priority <value 0-240>** – Enter a value between 0 and 240 to set the priority for the port interface. A higher priority will designate the interface to forward packets first. A lower number denotes a higher priority. This value must be divisible by 16.

### Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To designate ports 1 through 5, with instance id 2, to have an auto internalCost and a priority of 16:

DES-3528:5#config stp mst_ports 1-5 instance_id 2 internalCost auto priority 16
Command : config stp mst_ports 1-5 instance_id 2 internalCost auto priority 16
Success.
DES-3528:5#
To display the status of STP on the Switch:

**Status 1: STP enabled with STP compatible version**

```
DES-3528:5#show stp
Command: show stp

STP Bridge Global Settings
---------------------------
STP Status : Enabled
STP Version : STP Compatible
Max Age : 20
Hello Time : 2
Forward Delay : 15
Max Hops : 20
TX Hold Count : 3
Forwarding BPDU : Enabled
NNI BPDU Address : dot1ad

DES-3528:5#
```

**Status 2: STP enabled for RSTP**

```
DES-3528:5#show stp
Command: show stp

STP Bridge Global Settings
---------------------------
STP Status : Enabled
STP Version : RSTP
Max Age : 20
Hello Time : 2
Forward Delay : 15
Max Hops : 20
TX Hold Count : 3
Forwarding BPDU : Enabled
NNI BPDU Address : dot1ad

DES-3528:5#
```

**Status 3: STP enabled for MSTP**

```
DES-3528:5#show stp
Command: show stp

STP Bridge Global Settings
---------------------------
STP Status : Enabled
STP Version : MSTP
Max Age : 20
Forward Delay : 15
Max Hops : 20
TX Hold Count : 3
Forwarding BPDU : Enabled
NNI BPDU Address : dot1ad

DES-3528:5#
```
### show stp ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the Switch's current STP ports configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show stp ports &lt;portlist&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the STP ports settings for a specified port or group of ports (one port at a time).</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specifies a port or range of ports to be viewed. Information for a single port is displayed. If no ports are specified the STP information for port 1 will be displayed. Users may use the Space bar, p and n keys to view information for the remaining ports.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To show STP ports information for port 1 (STP enabled on Switch):

```
DES-3528:5#show stp ports
Command: show stp ports

MSTP Port Information
----------------------
Port Index:1 , Hello Time:2 /2 , Port STP:Enabled , External PathCost:Auto/200000 ,
Edge Port:False/No , P2P:Auto /Yes
Port RestrictedRole:False, Port RestrictedTCN:False
Port Forward BPDU:Enabled

MSTI  Designated Bridge  Internal PathCost  Prio  Status     Role
-----  ------------------ -----------------  ----  ---------- --------
 0   N/A                 200000          128  Disabled   Disabled
 3   N/A                 200000          128  Disabled   Disabled
```

### show stp instance

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the Switch's STP instance configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show stp instance &lt;value 0-15&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the Switch's current STP Instance Settings and the STP Instance Operational Status.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;value 0-15&gt;</code> – Enter a value defining the previously configured <code>instance_id</code> on the Switch. An entry of 0 will display the STP configuration for the CIST internally set on the Switch.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the STP instance configuration for instance 0 (the internal CIST) on the Switch:

```
```

DES-3528:5#show stp instance 0
Command: show stp instance 0

STP Instance Settings
-------------------------------
Instance Type : CIST
Instance Status : Enabled
Instance Priority : 32768 (bridge priority : 32768, sys ID ext : 0 )

STP Instance Operational Status
-------------------------------
Designated Root Bridge : 32766/00-90-27-39-78-E2
External Root Cost : 200012
Regional Root Bridge : 32768/00-53-13-1A-33-24
Internal Root Cost : 0
Designated Bridge : 32768/00-50-BA-71-20-D6
Root Port : 1
Max Age : 20
Forward Delay : 15
Last Topology Change : 856
Topology Changes Count : 2987

config stp nni_bpdu_addr
Purpose Used to configure BPDU destination address as dot1d or dot1ad.
Syntax config stp nni_bpdu_addr [dot1d | dot1ad]
Description This command is to configure the NNI-port-sent BPDU destination address to 802.1ad address (0180c20000D) or 802.1d address (0180c200001). When the Q-in-Q is enabled, NNI-port-sent BPDU destination address will set to dot1ad. The user can configure the NNI port send BPDU destination address to dot1d. The default is dot1d.
Parameters None.
Restrictions Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the STP BPDU destination address as dot1 ad on the Switch:

DES-3528:5#config stp nni_bpdu_addr dot1ad
Command: config stp nni_bpdu_addr dot1ad
Success.

DES-3528:5#

show stp mst_config_id
Purpose Used to display the MSTP configuration identification.
Syntax show stp mst_config_id
Description This command displays the Switch's current MSTP configuration identification.
Parameters None.
Restrictions None.

Example usage:
To show the MSTP configuration identification currently set on the Switch:
DES-3528:5# show stp mst_config_id
Command: show stp mst_config_id

Current MST Configuration Identification

<table>
<thead>
<tr>
<th>MSTI ID</th>
<th>Vid list</th>
</tr>
</thead>
<tbody>
<tr>

<td>1</td>
</tr>
</tbody>
</table>

DES-3528:5#
The layer 2 forwarding database commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create fdb</td>
<td>`&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>create fdb</td>
<td>`&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>create multicast_fdb</td>
<td>`&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config multicast_fdb</td>
<td>`&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config fdb aging_time</td>
<td><code>&lt;sec 10-1000000&gt;</code></td>
</tr>
<tr>
<td>delete fdb</td>
<td>`&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>clear fdb</td>
<td>`[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show multicast_fdb</td>
<td>`{vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show fdb</td>
<td>`{port &lt;port&gt;</td>
</tr>
<tr>
<td>config multicast</td>
<td>[vlanid &lt;vidlist&gt;</td>
</tr>
<tr>
<td>vlan_filtering_mode</td>
<td>{vlanid &lt;vidlist&gt;</td>
</tr>
<tr>
<td>show multicast</td>
<td>[vlanid &lt;vidlist&gt;</td>
</tr>
<tr>
<td>vlan_filtering_mode</td>
<td>{[vlanid &lt;vidlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create fdb**

**Purpose**: Used to create a static entry to the unicast MAC address forwarding table (database).

**Syntax**: `create fdb [vlan <vlan_name 32> | vlanid <vidlist>] <macaddr> port <port>`

**Description**: This command will make an entry into the Switch’s unicast MAC address forwarding database.

**Parameters**:<br>
- `<vlan_name 32>` – The name of the VLAN on which the MAC address resides.<br>
- `vlanid <vidlist>` - The list of VLANs by VLAN ID.<br>
- `<macaddr>` – The MAC address that will be added to the forwarding table.<br>
- `port <port>` – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To create a unicast MAC FDB entry:

```
DES-3528:5# create fdb default 00-00-00-00-01-02 port 5
Command: create fdb default 00-00-00-00-01-02 port 5
Success.

DES-3528:5#
```
### create fdb drop

**Purpose**  
Used to create a static entry to filter the packet with specified MAC address based on either source or destination MAC addresses.

**Syntax**  
`create fdb [vlan_name32] | vlanid <vidlist> [macaddr] drop`

**Description**  
This command is used to create a static entry to filter the packet with specified MAC address based on either source or destination MAC addresses.

**Parameters**  
- `<vlan_name>` – The name of the VLAN on which the MAC address resides.
- `<vlanid_list>` – Specifies a range of VLANs to be configured.
- `<macaddr>` – The MAC address that will be added to the forwarding table.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To filter an unicast MAC:

```
DES-3528:5# create fdb default 00-00-00-33-01-02 drop
Command: create fdb default 00-00-00-33-01-02 drop
Success.
DES-3528:5#
```

### create multicast_fdb

**Purpose**  
Used to create a static entry to the multicast MAC address forwarding table (database)

**Syntax**  
`create multicast_fdb <vlan_name> <macaddr>`

**Description**  
This command will make an entry into the Switch’s multicast MAC address forwarding database.

**Parameters**  
- `<vlan_name>` – The name of the VLAN on which the MAC address resides.
- `<macaddr>` – The MAC address that will be added to the forwarding table.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To create multicast MAC forwarding:

```
DES-3528:5# create multicast_fdb default 01-00-00-00-00-01
Command: create multicast_fdb default 01-00-00-00-00-01
Success.
DES-3528:5#
```
### config multicast_fdb

**Purpose**
Used to configure the Switch’s multicast MAC address forwarding database.

**Syntax**
```
config multicast_fdb <vlan_name 32> <macaddr> [add | delete] <portlist>
```

**Description**
This command configures the multicast MAC address forwarding table.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the MAC address resides.
- `<macaddr>` – The MAC address that will be added to the multicast forwarding table.
- `[add | delete]` – `add` will add ports to the forwarding table. `delete` will remove ports from the multicast forwarding table.
- `<portlist>` – Specifies a port or range of ports to be configured.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To add multicast MAC forwarding:
```
DES-3528:5#config multicast_fdb default 01-00-00-00-00-01 add 1-5
Command: config multicast_fdb default 01-00-00-00-00-01 add 1-5
Success.
DES-3528:5#
```

### config fdb aging_time

**Purpose**
Used to set the aging time of the forwarding database.

**Syntax**
```
config fdb aging_time <sec 10-1000000>
```

**Description**
The aging time affects the learning process of the Switch. Dynamic forwarding table entries, which are made up of the source MAC addresses and their associated port numbers, are deleted from the table if they are not accessed within the aging time. The aging time can be from 10 to 1000000 seconds with a default value of 300 seconds. A very long aging time can result in dynamic forwarding table entries that are out-of-date or no longer exist. This may cause incorrect packet forwarding decisions by the Switch. If the aging time is too short however, many entries may be aged out too soon. This will result in a high percentage of received packets whose source addresses cannot be found in the forwarding table, in which case the Switch will broadcast the packet to all ports, negating many of the benefits of having a switch.

**Parameters**
- `<sec 10-1000000>` – The aging time for the MAC address forwarding database value. The value in seconds may be between 10 and 1000000 seconds.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To set the FDB aging time:
```
DES-3528:5#config fdb aging_time 300
Command: config fdb aging_time 300
Success.
DES-3528:5#
```
### delete fdb

**Purpose**
Used to delete an entry to the Switch’s forwarding database.

**Syntax**
```
delete fdb <vlan_name 32> <macaddr>
```

**Description**
This command is used to delete a previous entry to the Switch’s MAC address forwarding database.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the MAC address resides.
- `<macaddr>` – The MAC address that will be added to the forwarding table.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To delete a permanent FDB entry:
```
DES-3528:5#delete fdb default 00-00-00-00-01-02
Command: delete fdb default 00-00-00-00-01-02
Success.

DES-3528:5#
```

To delete a multicast FDB entry:
```
DES-3528:5#delete fdb default 01-00-00-00-01-02
Command: delete fdb default 01-00-00-00-01-02
Success.

DES-3528:5#
```

### clear fdb

**Purpose**
Used to clear the Switch’s forwarding database of all dynamically learned MAC addresses.

**Syntax**
```
clear fdb [vlan <vlan_name 32> | port <port> | all]
```

**Description**
This command is used to clear dynamically learned entries to the Switch’s forwarding database.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the MAC address resides.
- `port <port>` – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.
- `all` – Clears all dynamic entries to the Switch’s forwarding database.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To clear all FDB dynamic entries:
```
DES-3528:5#clear fdb all
Command: clear fdb all
Success.

DES-3528:5#
```
show multicast_fdb

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the contents of the Switch’s multicast forwarding database.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show multicast_fdb [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the current contents of the Switch’s multicast MAC address forwarding database.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides. &lt;macaddr&gt; – The MAC address that is present in the forwarding database table.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display multicast MAC address table:

DES-3528:5#show multicast_fdb vlan default
Command: show multicast_fdb vlan default

VLAN Name       : default
MAC Address     : 01-00-5E-00-00-00
Egress Ports    : 1-5
Mode            : Static

Total Entries  : 1

DES-3528:5#

show fdb

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current unicast MAC address forwarding database.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show fdb { port &lt;port&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the current contents of the Switch’s forwarding database.</td>
</tr>
<tr>
<td>Parameters</td>
<td>port &lt;port&gt; – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port. &lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides. vlanid &lt;vidlist&gt; - The list of VLANs by VLAN ID. &lt;macaddr&gt; – The MAC address that is present in the forwarding database table. static – Displays the static MAC address entries. drop - Displays the drop MAC address entries. aging_time – Displays the aging time for the MAC address forwarding database.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display unicast MAC address table:
config multicast vlan_filtering_mode

Purpose:
Used to configure the multicast packet filtering mode for VLANs.

Syntax:
```
config multicast vlan_filtering_mode [vlan <vidlist> | vlan <vlan_name 32> | all ]
[forward_all_groups | forward_unregistered_groups | filter_unregistered_groups]
```

Description:
The command configures the multicast packet filtering mode for VLANs.

Parameters:
- `vlanid_list` – Specifies a range of VLANs to be configured.
- The filtering mode can be any of the following:
  - `forward_all_groups` - All multicast groups will be forwarded based on VLAN.
  - `forward_unregistered_groups` - The registered group will be forwarded based on the register table. The unregister group will be forwarded based on VLAN.
  - `filter_unregistered_groups` - The registered group will be forwarded based on the register table. The unregister group will be filtered.

Restrictions:
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the multicast packet filtering mode for vlans:

```
DES-3528:5# config multicast vlan_filtering_mode vlan 200-300 forward_all_groups
Command: config multicast vlan_filtering_mode vlan 200-300 forward_all_groups

Success.

DES-3528:5#
```
show multicast vlan_filtering_mode

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the multicast packet filtering mode for VLANs.</th>

DES-3528:5#
```
TRAFFIC CONTROL COMMANDS

On a computer network, packets such as Multicast packets and Broadcast packets continually flood the network as normal procedure. At times, this traffic may increase do to a malicious endstation on the network or a malfunctioning device, such as a faulty network card. Thus, switch throughput problems will arise and consequently affect the overall performance of the switch network. To help rectify this packet storm, the Switch will monitor and control the situation.

The packet storm is monitored to determine if too many packets are flooding the network, based on the threshold level provided by the user. Once a packet storm has been detected, the Switch will drop packets coming into the Switch until the storm has subsided. This method can be utilized by selecting the Drop option of the Action field in the window below.

The Switch will also scan and monitor packets coming into the Switch by monitoring the Switch’s chip counter. This method is only viable for Broadcast and Multicast storms because the chip only has counters for these two types of packets. Once a storm has been detected (that is, once the packet threshold set below has been exceeded), the Switch will shutdown the port to all incoming traffic excepting the exception of STP BPDU packets, for a time period specified using the countdown field. If the packet storm continues before the countdown timer expires, the port will again allow all incoming traffic. If this field times out and the packet storm continues, the port will be placed in a Shutdown Forever mode which will produce a warning message to be sent to the Trap Receiver. Once in Shutdown Forever mode, the port will be recovered after 5 minutes, or the user manually resets the port using the config ports enable command, mentioned previously in this manual.

The broadcast storm control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config traffic control</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show traffic control</td>
<td>[[&lt;portlist&gt;]]</td>
</tr>
<tr>
<td>config traffic trap</td>
<td>[none</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

config traffic control

Purpose  Used to configure broadcast/multicast/unicast packet storm control. The software mechanism is provided to monitor the traffic rate in addition to the hardware storm control mechanism previously provided.

Description  This command is used to configure broadcast/multicast/unicast storm control. By adding the new software traffic control mechanism, the user can now use both a hardware and software mechanism, the latter of which will now provide shutdown, recovery and trap notification functions for the Switch.

Parameters  <portlist> – Used to specify a group list of ports to be configured for traffic control, as defined below:

- all – Specifies all portlists are to be configured for traffic control on the Switch.
- broadcast [enable | disable] – Enables or disables broadcast storm control.
- multicast [enable | disable] – Enables or disables multicast storm control.
- unicast [enable | disable] – Enables or disables unicast traffic control.
- action – Used to configure the action taken when a storm control has been detected on the Switch. The user has two options:
  - drop – Utilizes the hardware Traffic Control mechanism, which means the Switch’s hardware will determine the Packet Storm based on the Threshold value stated and drop packets until the issue is resolved.
  - shutdown – Utilizes the Switch’s software Traffic Control mechanism to determine
config traffic control

the Packet Storm occurring. Once detected, the port will deny all incoming traffic to
the port except STP BPDU packets, which are essential in keeping the Spanning
Tree operational on the Switch. If the countdown timer has expired and yet the
Packet Storm continues, the port will be placed in Shutdown Forever mode. It can
be recovered after 5 minutes, or the user manually resets the port using the config
ports enable command. Choosing this option obligates the user to configure the
time_interval field as well, which will provide packet count samplings from the
Switch’s chip to determine if a Packet Storm is occurring.

threshold <value 0-255000> – The upper threshold at which the specified traffic control is
switched on. The <value> is the number of broadcast/multicast/unicast packets, in packets
per second (pps), received by the Switch that will trigger the storm traffic control measures.
The default setting is 131072.

time_interval – The Interval will set the time between Multicast and Broadcast packet counts
sent from the Switch’s chip to the Traffic Control function. These packet counts are the
determining factor in deciding when incoming packets exceed the Threshold value.

value 5-30 – The Interval may be set between 5 and 30 seconds with the default setting of 5
seconds.

countdown – The countdown timer is set to determine the amount of time, in minutes, that
the Switch will wait before shutting down the port that is experiencing a traffic storm. The
Switch will shutdown the port only if the traffic level exceeds the previously configured
threshold all the time during this countdown period. This parameter is only useful for ports
configured as shutdown in the action field of this command and therefore will not operate
for Hardware based Traffic Control implementations.

• value 0 – 0 is the default setting for this field and 0 will denote that the port will
  never shutdown.

• value 5-30 – Select a time from 5 to 30 minutes that the Switch will wait before
  shutting down. Once this time expires and the port is still experiencing packet
  storms, the port will be placed in shutdown forever mode and can only be manually
  recovered using the config ports command mentioned previously in this manual.

Restrictions

Only Administrator and Operator-level users can issue this command.

Example usage:
To configure traffic control and enable broadcast storm control for ports 1-12:

DES-3528:5#config traffic control 1-12 broadcast enable action shutdown threshold 1
countdown 10 time_interval 10
Command: config traffic control 1-12 broadcast enable action shutdown threshold 1
countdown 10 time_interval 10
Success.

DES-3528:5#

show traffic control

Purpose Used to display current traffic control settings.

Syntax show traffic control { <portlist> }

Description This command displays the current storm traffic control configuration on the Switch.

Parameters <portlist> – Used to specify port or list of ports for which to display traffic control settings.
The beginning and end of the port list range are separated by a dash.

Restrictions None.

Example usage:
To display traffic control settings:
DES-3528:5#show traffic control

Command: show traffic control

Traffic Storm Control Trap : [None]

### config traffic trap

#### Purpose
Used to configure the trap settings for the packet storm control mechanism.

#### Syntax
```
cfg config traffic trap [none | storm_occurred | storm_cleared | both]
```

#### Description
This command is used to configure how packet storm control trap messages will be used when a packet storm is detected by the Switch. This function can only be used for the software traffic storm control mechanism (when the action field in the `config traffic storm_control` command is set as shutdown).

#### Parameters
- **none** – No notification will be generated or sent when a packet storm control is detected by the Switch.
- **storm_occurred** – A notification will be generated and sent when a packet storm has been detected by the Switch.
- **storm_cleared** – A notification will be generated and sent when a packet storm has been cleared by the Switch.
- **both** – A notification will be generated and sent when a packet storm has been detected and cleared by the Switch.

#### Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure notifications to be sent when a packet storm control has been detected and cleared by the Switch.
<table>
<thead>
<tr>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>config traffic trap both</td>
</tr>
</tbody>
</table>

Success.

DES-3528:5#
QoS COMMANDS

The Switch supports 802.1p priority queuing. The Switch has 8 priority queues. These priority queues are numbered from 6 (Class 6) — the highest priority queue — to 0 (Class 0) — the lowest priority queue. The eight priority tags specified in IEEE 802.1p (p0 to p7) are mapped to the Switch’s priority queues as follows:

- Priority 0 is assigned to the Switch’s Q2 queue.
- Priority 1 is assigned to the Switch’s Q0 queue.
- Priority 2 is assigned to the Switch’s Q1 queue.
- Priority 3 is assigned to the Switch’s Q3 queue.
- Priority 4 is assigned to the Switch’s Q4 queue.
- Priority 5 is assigned to the Switch’s Q5 queue.
- Priority 6 is assigned to the Switch’s Q6 queue.
- Priority 7 is assigned to the Switch’s Q6 queue.
- Q7 is reserved for stacking function.

Priority scheduling is implemented by the priority queues stated above. The Switch will empty the eight hardware priority queues in order, beginning with the highest priority queue, 6, to the lowest priority queue, 0. Each hardware queue will transmit all of the packets in its buffer before permitting the next lower priority to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue will begin transmitting any packets it may have received.

The commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>disable hol_prevention</td>
<td></td>
</tr>
<tr>
<td>show hol_prevention</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
**config bandwidth_control**

**Purpose**
Used to configure bandwidth control on a port by-port basis.

**Syntax**
```plaintext
config bandwidth_control [<portlist> | all] [rx_rate [no_limit | <value 64-1024000>]] |
  tx_rate [no_limit | <value 64-1024000>]](1)
```

**Description**
This command is used to configure bandwidth on a port by-port basis.

**Parameters**
- `<portlist>` – Specifies a port or range of ports to be configured.
- `rx_rate` – Specifies that one of the parameters below (no_limit or <value 64-1024000>) will be applied to the rate at which the above specified ports will be allowed to receive packets
  - `no_limit` – Specifies that there will be no limit on the rate of packets received by the above specified ports.
  - `<value 64-1024000>` – Specifies the packet limit, in Kbps, that the above ports will be allowed to receive.
- `tx_rate` – Specifies that one of the parameters below (no_limit or <value 64-1024000>) will be applied to the rate at which the above specified ports will be allowed to transmit packets.
  - `no_limit` – Specifies that there will be no limit on the rate of packets received by the above specified ports.
  - `<value 64-1024000>` – Specifies the packet limit, in Kbps, that the above ports will be allowed to receive.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

---

Example usage:

To configure bandwidth control:

```
DES-3528:5#config bandwidth_control 1-10 tx_rate 64
Command: config bandwidth_control 1-10 tx_rate 64
Success.
DES-3528:5#
```

---

**show bandwidth_control**

**Purpose**
Used to display the bandwidth control table.

**Syntax**
```plaintext
show bandwidth_control {<portlist>}
```

**Description**
This command displays the current bandwidth control configuration on the Switch, on a port-by-port basis.

**Parameters**
- `<portlist>` – Specifies a port or range of ports to be viewed.

**Restrictions**
None.

Example usage:

To display port bandwidth control table:
DES-3528:5#show bandwidth_control 1-10
Command: show bandwidth_control 1-10

DES-3528:5#

config cos bandwidth_control

Purpose
Used to configure per port or flow bandwidth control. For per flow bandwidth control, it can be based on the assigned CoS queue.

Syntax
config cos bandwidth_control {ports [<portlist> | all]} <cos_id_list 0-6> {min_rate [no_limit | <value 64-1024000>] max_rate [no_limit | <value 64-1024000>]}(1)

Description
This command is used to set per port or flow bandwidth control. For per flow bandwidth control, it can be based on the assigned CoS queue.

Mini-rate specifies the minimal guaranteed bandwidth. Specify no limit for the mini-rate means no guaranteed bandwidth.

Max-rate specifies the max-rate limitation. When it is specified, packet transmitted from the queue will not exceed the specified max-rate limitation even though there is still available bandwidth.

The specification of mini-rate and max-rate are effective regardless whether the queue is operated in the strict mode or in the wrr mode.

Parameters

- **<portlist>** – Specifies a port or range of ports to be configured.
- **<cos_id_list 0-6>** – Specifies a priority queue.
- **min_rate** – Specifies one of the parameters below (no_limit or <value 64-1024000>) that will be applied to the minimum rate at which the above specified class will be allowed to receive packets.
  - **no_limit** – Specifies that there will be no limit on the rate of packets received by the above specified class.
  - **<value 64-1024000>** – Specifies the packet limit, in Kbps, that the above ports will be receive at least.
- **max_rate** – Specifies one of the parameters below (no_limit or <value 64-1024000>) that will be applied to the maximum rate at which the above specified class will be allowed to receive packets.
  - **no_limit** – Specifies that there will be no limit on the rate of packets received by the above specified class.
  - **<value 64-1024000>** – Specifies the packet limit, in Kbps, that the above ports will be received at most.
### config cos bandwidth_control

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure CoS bandwidth control:

```
DES-3528:5#config cos bandwidth_control ports 1-10 2 min_rate 100 max_rate 200  
Command: config cos bandwidth_control ports 1-10 2 min_rate 100 max_rate 200  
The setting values are not a multiple of 64, closest values 128 and 192 are chosen.  
Success.  
DES-3528:5#
```

### show cos bandwidth_control

**Purpose**
Used to display the per port per cos queue bandwidth control setting.

**Syntax**
show cos bandwidth_control {<portlist>}

**Description**
This command is used to display the per port per cos queue bandwidth control setting.

**Parameters**
- `<portlist>` – Specifies a port or range of ports to be viewed.

**Restrictions**
None.

**Example usage:**
To display port per cos bandwidth control table:

```
DES-3528:5#show cos bandwidth_control 10  
Command: show cos bandwidth_control 10  

Class Bandwidth Control Table On Port: 10

DES-3528:5#```
### config scheduling

**Purpose**
Used to configure the traffic scheduling mechanism for each COS queue.

**Syntax**
```
config scheduling {ports [<portlist> | all]} <class_id 0-6> [strict | weight <value 1-127>]
```

**Description**
The Switch contains eight hardware priority queues. Incoming packets must be mapped to one of these eight queues. This command is used to specify the rotation mechanism regarding how packets in these eight hardware priority queues are being handled and emptied.

The Switch's default (if the config scheduling command is not used, or if the config scheduling command is entered with weight parameters set to 0) is to empty the 7 hardware priority queues in order – from the highest priority queue (hardware queue 6) to the lowest priority queue (hardware queue 0). Each hardware queue will transmit all of the packets in its buffer before allowing the next lower priority queue to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue can again transmit any packets it may have received.

The weight parameter allows the user to specify the maximum number of packets a given hardware priority queue can transmit before allowing the next lower hardware priority queue to begin transmitting its packets. A value between 0 and 127 can be specified. For example, if a value of 3 is specified, then the highest hardware priority queue (number 6) will be allowed to transmit 3 packets – then the next lower hardware priority queue (number 5) will be allowed to transmit 3 packets, and so on, until all of the queues have transmitted 3 packets. The process will then repeat.

**Parameters**
- `<class_id 0-6>` – Specifies which of the seven hardware priority queues that the config scheduling command will apply to. The seven hardware priority queues are identified by number, from 0 to 6, with the queue 0 being the lowest priority.
- `<portlist>` – Specifies a range of ports to be configured.
- all – Choose this option to select all ports.
- strict – Specifies this queue is always working in strict mode.
- weight `<value 1-127>` – Using weighted fair algorithm to handle packets in priority queues. Each queue will operate based on its setting of weight values.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure the traffic scheduling for each CoS queue:

```
DES-3528:5# config scheduling ports 10 3 strict
Command: config scheduling ports 10 3 strict
Success.
DES-3528:5#
```

### config scheduling mechanism

**Purpose**
Used to configure the traffic scheduling mechanism for a port or a range of ports.

**Syntax**
```
config scheduling_mechanism {ports [<portlist> | all]} [strict | wrr]
```

**Description**
This command is used to specify how the switch handles packets in priority queues.

**Parameters**
- `<portlist>` – Select a port or a list of ports to configure.
- all – Choose this option to select all ports.
- strict – The highest queue first process. That is, the highest queue should always be processed first.
- wrr – Using weighted roundrobin algorithm to handle packets in priority queues.
**config scheduling mechanism**

| Restrictions | Only Administrator and Operation-level users can issue this command. |

Example usage:

To configure the traffic scheduling mechanism for each COS queue:

```
DES-3528:5# config scheduling_mechanism ports 1 strict
Command: config scheduling_mechanism ports 1 strict
Success.
```

**show scheduling**

| Purpose | Used to display the current configured traffic scheduling for a port or a range of ports on the Switch. |
| Syntax | `show scheduling {<portlist>}` |
| Description | This command will display the current traffic scheduling settings for a port or a range of ports on the Switch. |
| Parameters | `<portlist>` – Specifies a port or a range of ports to be displayed. |
| Restrictions | None. |

Example usage:

To display the current scheduling configuration:

```
DES-3528:5# show scheduling
```

```
Port 1: strict
```

```
DES-3528:5#
```
show scheduling

Command: show scheduling

---

**show scheduling_mechanism**

**Purpose**: Used to show the current traffic scheduling mechanism for a port or a range of ports on the Switch.

**Syntax**: `show scheduling_mechanism {<portlist>}`

**Description**: This command is used to display the current traffic scheduling mechanism for a port or a range of ports on the Switch.

**Parameters**: `<portlist>` – Specifies a range of ports to be displayed.

**Restrictions**: None.

---

Example usage:

To display the scheduling mechanism:
DES-3528:5# show scheduling_mechanism 1-4
Command: show scheduling_mechanism 1-4

<table>
<thead>
<tr>
<th>Port</th>

<td>Strict</td>
</tr>
</tbody>
</table>

DES-3528:5#

config 802.1p user_priority

Purpose: Used to map the 802.1p user priority of an incoming packet to one of the eight hardware queues on the Switch.

Syntax: config 802.1p user_priority {ports [<portlist> | all] <priority 0-7> <class_id 0-6>}

Description: This command allows users to configure the way the Switch will map an incoming packet, based on its 802.1p user priority, to one of the eight available hardware priority queues on the Switch.

The Switch’s default is to map the following incoming 802.1p user priority values to the eight hardware priority queues:

<table>
<thead>
<tr>
<th>802.1p</th>
<th>Hardware Queue</th>
<th>Remark</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>2</td>
<td>Mid-low</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
<td>Lowest</td>
</tr>
<tr>
<td>2</td>
<td>1</td>
<td>Lowest</td>
</tr>
<tr>
<td>3</td>
<td>3</td>
<td>Mid-low</td>
</tr>
<tr>
<td>4</td>
<td>4</td>
<td>Mid-high</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
<td>Mid-high</td>
</tr>
<tr>
<td>6</td>
<td>6</td>
<td>Highest</td>
</tr>
<tr>
<td>7</td>
<td>6</td>
<td>Highest</td>
</tr>
</tbody>
</table>

This mapping scheme is based upon recommendations contained in IEEE 802.1D. Change this mapping by specifying the 802.1p user priority users want to map to the <class_id 0-6> (the number of the hardware queue).

Parameters:
- [portlist] | all – Specifies a range of ports to be configured. All specifies all ports.
- <priority 0-7> – The 802.1p user priority to associate with the <class_id 0-6> (the number of the hardware queue).
- <class_id 0-6> – The number of the Switch’s hardware priority queue. The Switch has seven hardware priority queues available. They are numbered between 0 (the lowest priority) and 6 (the highest priority).

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To configure 802.1p user priority on the Switch:

DES-3528:5# config 802.1p user_priority ports 1 5 5
Command: config 802.1p user_priority ports 1 5 5
Success.

DES-3528:5#
### show 802.1p user_priority

<tr>
<th>Purpose</th>
<th>Used to display the current mapping between an incoming packet’s 802.1p priority value and one of the Switch’s eight hardware priority queues.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show 802.1p user_priority {&lt;portlist&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the current mapping of an incoming packet’s 802.1p priority value to one of the Switch’s seven hardware priority queues.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>{&lt;portlist&gt;}</code> – Specifies a range of ports to be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To show 802.1p user priority:

```
DES-3528:5#show 802.1p user_priority 1-2
Command: show 802.1p user_priority 1-2

QOS Class of Traffic

Port 1
- Priority-0  ->  <Class-2>
- Priority-1  ->  <Class-0>
- Priority-2  ->  <Class-1>
- Priority-3  ->  <Class-3>
- Priority-4  ->  <Class-4>
- Priority-5  ->  <Class-5>
- Priority-6  ->  <Class-6>
- Priority-7  ->  <Class-6>

Port 2
- Priority-0  ->  <Class-2>
- Priority-1  ->  <Class-0>
- Priority-2  ->  <Class-1>
- Priority-3  ->  <Class-3>
- Priority-4  ->  <Class-4>
- Priority-5  ->  <Class-5>
- Priority-6  ->  <Class-6>
- Priority-7  ->  <Class-6>
```
**config 802.1p default_priority**

**Purpose**
Used to configure the 802.1p default priority settings on the Switch. If an untagged packet is received by the Switch, the default priority configured with this command will be written to the packet’s priority field.

**Syntax**
```
config 802.1p default_priority [<portlist> | all] <priority 0-7>
```

**Description**
This command is used to specify the default priority for the Switch to handle the untagged packets. The priority value entered with this command will be used to determine which of the seven hardware priority queues the packet is forwarded to.

**Parameters**
- `<portlist>` – Specifies a port or range of ports to be configured.
- `all` – Specifies that the command applies to all ports on the Switch.
- `<priority 0-7>` – The priority value to assign to untagged packets received by the Switch or a range of ports on the Switch.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure 802.1p default priority on the Switch:

```
DES-3528:5#config 802.1p default_priority all 5
Command: config 802.1p default_priority all 5
Success.
DES-3528:5#
```

**show 802.1 default_priority**

**Purpose**
Used to display the current configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.

**Syntax**
```
show 802.1p default_priority {<portlist>}
```

**Description**
This command is used to display the current configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.

**Parameters**
- `<portlist>` – Specifies a port or range of ports to be configured.

**Restrictions**
None.
Example usage:

To display the current 802.1p default priority configuration on the Switch:

```
DES-3528:5#show 802.1p default_priority
Command: show 802.1p default_priority

Port       Priority      Effective Priority
     ----       -----------   ------------------
     1:1        0             0
     1:2        0             0
     1:3        0             0
     1:4        0             0
     1:5        0             0
     1:6        0             0
     1:7        0             0
     1:8        0             0
     1:9        0             0
     1:10       0             0
     1:11       0             0
     1:12       0             0
     1:13       0             0
     1:14       0             0

```

**enable hol_prevention**

**Purpose**
Used to enable the HOL prevention state.

**Syntax**
`enable hol_prevention`

**Description**
This command is used to enable the HOL prevention function on the switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable HOL prevention:

```
DES-3528:5#enable hol_prevention
Command: enable hol_prevention

Success.
DES-3528:5#
```
disable hol_prevention

<table>
<thead>
<tr>
<th>Purpose</th>

Example usage:

To display HOL prevention:

```
DES-3528:5#show hol_prevention
Command: show hol_prevention

Device HOL Prevention State: Enabled

DES-3528:5#
```
PORT MIRRORING COMMANDS

The port mirroring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config mirror port</td>
<td>`&lt;port&gt; {[add</td>
</tr>
<tr>
<td>enable mirror</td>
<td></td>
</tr>
<tr>
<td>disable mirror</td>
<td></td>
</tr>
<tr>
<td>show mirror</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

config mirror port

Purpose
Used to configure a mirror port – source port pair on the Switch. Traffic from any source port to a target port can be mirrored for real-time analysis. A logic analyzer or an RMON probe can then be attached to study the traffic crossing the source port in a completely obtrusive manner.

Syntax
`config mirror port <port> {[add | delete] source ports <portlist> [rx | tx | both]}`

Description
This command allows a range of ports to have all of their traffic also sent to a designated port, where a network sniffer or other device can monitor the network traffic. In addition, users can specify that only traffic received by or sent by one or both is mirrored to the Target port.

Parameters
- `<port>` – This specifies the Target port (the port where mirrored packets will be received). The target port must be configured in the same VLAN and must be operating at the same speed as the source port. If the target port is operating at a lower speed, the source port will be forced to drop its operating speed to match that of the target port.
- `[add | delete]` – Specifies if the user wishes to add or delete ports to be mirrored that are specified in the `source ports` parameter.
- `source ports` – The port or ports being mirrored. This cannot include the Target port.
- `<portlist>` – This specifies a port or range of ports that will be mirrored. That is, the range of ports in which all traffic will be copied and sent to the Target port.
- `rx` – Allows the mirroring of only packets received by (flowing into) the port or ports in the port list.
- `tx` – Allows the mirroring of only packets sent to (flowing out of) the port or ports in the port list.
- `both` – Mirrors all the packets received or sent by the port or ports in the port list.

Restrictions
The Target port cannot be listed as a source port.
Only Administrator and Operator-level users can issue this command.

Example usage:
To add the mirroring ports:

```
DES-3528:5#config mirror port 1 add source ports 2-5 both
Command: config mirror port 1 add source ports 2-5 both
Success.
```

DES-3528:5#
Example usage:

To delete the mirroring ports:

```
DES-3528:5#config mirror port 1 delete source port 2-4 both
Command: config mirror 1 delete source 2-4 both
Success.
DES-3528:5#
```

### enable mirror

**Purpose**: Used to enable a previously entered port mirroring configuration.

**Syntax**: `enable mirror`

**Description**: This command, combined with the `disable mirror` command below, allows the user to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.

**Parameters**: None.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To enable mirroring configurations:

```
DES-3528:5#enable mirror
Command: enable mirror
Success.
DES-3528:5#
```

### disable mirror

**Purpose**: Used to disable a previously entered port mirroring configuration.

**Syntax**: `disable mirror`

**Description**: This command, combined with the `enable mirror` command above, allows the user to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.

**Parameters**: None.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To disable mirroring configurations:

```
DES-3528:5#disable mirror
Command: disable mirror
Success.
DES-3528:5#
```
**show mirror**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the current port mirroring configuration on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show mirror</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the current port mirroring configuration on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display mirroring configuration:

```
Current Settings
Mirror Status: Enabled
Target Port : 1
Mirrored Port
  RX: 2–5
  TX: 2–5

DES-3528:5#
```
The VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create vlan</td>
<td><code>&lt;vlan_name 32&gt; tag &lt;vlanid 2-4094&gt; {type 1q_vlan advertisement}</code></td>

<tr>
<td>config dot1v_protocol_group</td>
<td>`[group_id &lt;id 1-16&gt;</td>
</tr>
<tr>
<td>delete dot1v_protocol_group</td>
<td>`[group_id &lt;id 1-16&gt;</td>
</tr>
<tr>
<td>show dot1v_protocol_group</td>
<td>`{group_id&lt;id 1-16&gt;</td>
</tr>
<tr>
<td>config port dot1v ports</td>
<td>`&lt;portlist&gt; {&lt;portlist&gt; [[add protocol_group [group_id &lt;id &gt;</td>
</tr>
<tr>
<td>show port dot1v</td>
<td><code>{ports &lt;portlist&gt;}</code></td>
</tr>
<tr>
<td>enable pvid auto_assign</td>
<td></td>
</tr>
<tr>
<td>disable pvid auto_assign</td>
<td></td>
</tr>
<tr>
<td>show pvid auto_assign</td>
<td></td>
</tr>
<tr>
<td>config gvrp</td>
<td>`[timer [join</td>
</tr>
<tr>
<td>show gvrp</td>
<td></td>
</tr>
<tr>
<td>enable vlan_trunk</td>
<td></td>
</tr>
<tr>
<td>disable vlan_trunk</td>
<td></td>
</tr>
<tr>
<td>config vlan_trunk ports</td>
<td>`&lt;portlist&gt; {&lt;portlist&gt; [[state [enable</td>
</tr>
<tr>
<td>show vlan_trunk</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
create vlan

**Purpose**
Used to create a VLAN on the Switch.

**Syntax**
```
create vlan <vlan_name 32> tag <vlanid 2-4094> { type 1q_vlan advertisement }
```

**Description**
This command allows the user to create a VLAN on the Switch.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN to be created.
- `<vlanid 2-4094>` – The VLAN ID of the VLAN to be created. Allowed values = 2-4094
- `advertisement` – Specifies that the VLAN is able to join GVRP.

**Restrictions**
Each VLAN name can be up to 32 characters. Up to 4094 static VLANs may be created per configuration. Only Administrator and Operator-level users can issue this command.

**Example usage:**
To create a VLAN v1, tag 2:

```
DES-3528:5# create vlan v1 tag 2
Command: create vlan v1 tag 2
Success.
DES-3528:5#
```

create vlan vlanid

**Purpose**
Used to create multiple VLANs by VLAN ID list on the switch.

**Syntax**
```
create vlan vlanid <vidlist> { advertisement }
```

**Description**
This command creates multiple VLANs on the switch.

**Parameters**
- `<vidlist>` – Specifies a range of multiple VLAN IDs to be created.
- `advertisement` – Join GVRP or not. If not, the VLAN can’t join dynamically.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To create a VLAN ID on the Switch:

```
DES-3528:5# create vlan vlanid 5 advertisement
Command: create vlan vlanid 5 advertisement
Success
DES-3528:5#
```

delete vlan

**Purpose**
Used to delete a previously configured VLAN on the Switch.

**Syntax**
```
delete vlan <vlan_name 32>
```

**Description**
This command will delete a previously configured VLAN on the Switch.

**Parameters**
- `<vlan_name 32>` – The VLAN name of the VLAN to be deleted.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To remove the VLAN “v1”:

```
```
Command: delete vlan v1
Success.

**delete vlan vlanid**

Purpose: Used to delete multiple VLANs by VLAN ID on the switch.

Syntax: delete vlan vlanid <vidlist>

Description: This command deletes previously configured multiple VLANs on the Switch.

Parameters:
- `<vidlist>` - Specifies a range of multiple VLAN IDs to be deleted.

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To delete VLAN ID on the Switch:

```
DES-3528:5#delete vlan vlanid 5
Command: delete vlan vlanid 5
Success
DES-3528:5#
```

**config vlan**

Purpose: Used to add additional ports to a previously configured VLAN, and enable or disable the VLAN advertisement.

Syntax: config vlan <vlan_name 32> { [ add [ tagged | untagged | forbidden ] | delete ] <portlist> | advertisement [ enable | disable]}(1)

Description: This command allows the user to add ports to the port list of a previously configured VLAN, and enable or disable the VLAN advertisement. The user can specify the additional ports as tagging, untagging, or forbidden. The default is to assign the ports as untagging.

Parameters:
- `<vlan_name 32>` - The name of the VLAN to which to add ports.
- `add` - Entering the add parameter will add ports to the VLAN. There are three types of ports to add:
  - `tagged` - Specifies the additional ports as tagged.
  - `untagged` - Specifies the additional ports as untagged.
  - `forbidden` - Specifies the additional ports as forbidden
- `delete` - Deletes ports from the specified VLAN.
- `<portlist>` - A port or range of ports to add to, or delete from the specified VLAN.
- `advertisement [enable | disable]` - Enables or disables GVRP on the specified VLAN.

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To add 4 through 8 as tagged ports to the VLAN v1:

```
DES-3528:5#config vlan v1
Command: config vlan v1
Success
DES-3528:5#
```
To add tagged ports to a VLAN:

```
DES-3528:5#config vlan v1 add tagged 4-8
Command: config vlan v1 add tagged 4-8
Success.
DES-3528:5#
```

To delete ports from a VLAN:

```
DES-3528:5#config vlan v1 delete 6-8
Command: config vlan v1 delete 6-8
Success.
DES-3528:5#
```

### config vlan vlanid

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to add additional ports to a previously configured VLAN and enable or disable the VLAN advertisement.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config vlan vlanid &lt;vidlist&gt; { [ add [ tagged</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to add or delete ports of the port list of previously configured VLAN(s). You can specify the additional ports as being tagged, untagged or forbidden. The same port is allowed to be an untagged member port of multiple VLAN’s. You can also specify if the VLAN will join GVRP or not with the <code>advertisement</code> parameter. The <code>name</code> parameter allows you to specify the name of the VLAN that needs to be modified.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vidlist&gt;</code> – Specifies a range of multiple VLAN IDs to be configured. <code>tagged</code> – Specifies the additional ports as tagged. <code>untagged</code> – Specifies the additional ports as untagged. <code>forbidden</code> – Specifies the additional ports as forbidden. <code>&lt;portlist&gt;</code> – A range of ports to add to or delete from the VLAN. <code>advertisement</code> – Entering the advertisement parameter specifies if the VLAN should join GVRP or not. There are two parameters: <code>enable</code> – Specifies that the VLAN should join GVRP. <code>Disable</code> – Specifies that the VLAN should not join GVRP. <code>name</code> – Entering the name parameter specifies the name of the VLAN to be modified. <code>&lt;vlan_name 32&gt;</code> – Enter a name for the VLAN.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To config vlan vlanid on the switch:

```
DES-3528:5#config vlan vlanid 5 add tagged 7 advertisement enable name RG
Command: config vlan vlanid 5 add tagged 7 advertisement enable name RG
Success.
DES-3528:5#
```
config port_vlan

**Purpose**
Used to set the ingress checking status, and the sending and receiving GVRP information.

**Syntax**
```
config port_vlan [portlist | all] { gvrp_state [enable | disable] | ingress_checking [enable | disable] | acceptable_frame [tagged_only | admit_all] pvid <vlanid 1-4094> }
```

**Description**
This command is used to configure the Group VLAN Registration Protocol on the Switch. Ingress checking, the sending and receiving of GVRP information, and the Port VLAN ID (PVID) can be configured.

**Parameters**
- `<portlist>` – A port or range of ports for which users want to enable GVRP for.
- `all` – Specifies all of the ports on the Switch.
- `state [enable | disable]` – Enables or disables GVRP for the ports specified in the port list.
- `ingress_checking [enable | disable]` – Enables or disables ingress checking for the specified port list.
- `acceptable_frame [tagged_only | admit_all]` – This parameter states the frame type that will be accepted by the Switch for this function. `tagged_only` implies that only VLAN tagged frames will be accepted, while `admit_all` implies tagged and untagged frames will be accepted by the Switch.
- `pvid <vlanid 1-4094>` – Specifies the default VLAN associated with the port.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To set the ingress checking status, the sending and receiving GVRP information:

```
DES-3528:5#config port_vlan 1-4 gvrp_state enable ingress_checking enable acceptable_frame tagged_only pvid 2
Command: config gvrp 1-4 state enable ingress_checking enable acceptable_frame tagged_only pvid 2
Success.
DES-3528:5#
```

enable gvrp

**Purpose**
Used to enable the Generic VLAN Registration Protocol (GVRP).

**Syntax**
enable gvrp

**Description**
This command, along with `disable gvrp` below, is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To enable the generic VLAN Registration Protocol (GVRP):

```
DES-3528:5#enable gvrp
Command: enable gvrp
Success.
DES-3528:5#
```
disable gvrp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the Generic VLAN Registration Protocol (GVRP).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable gvrp</td>
</tr>
<tr>
<td>Description</td>
<td>This command, along with enable gvrp, is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the Generic VLAN Registration Protocol (GVRP):

```
DES-3528:5#disable gvrp
Command: disable gvrp
Success.
DES-3528:5#
```

show vlan

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current VLAN configuration on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show vlan { [&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays summary information about each VLAN including the VLAN ID, VLAN name, the Tagging/Untagging status, and the Member/Non-member/Forbidden status of each port that is a member of the VLAN.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – The VLAN name of the VLAN for which to display a summary of settings.</td>
</tr>
<tr>
<td></td>
<td>&lt;vidlist&gt; – Specifies a list of VLANs by VLAN ID.</td>
</tr>
<tr>
<td></td>
<td>&lt;portlist&gt; - Specifies the port to be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the Switch’s current VLAN settings:

```
DES-3528:5# show vlan
Command: show vlan

VLAN Trunk State : Enabled
VLAN Trunk Member Ports : 1-5

VID : 1          VLAN Name       : default

DES-3528:5#
show port_vlan

Purpose: Used to display the ports’ VLAN attributes on the Switch.

Syntax: show port_vlan {<portlist>}

Description: This command displays the GVRP status for a port list on the Switch.

Parameters:  
  <portlist> – Specifies a range of ports to be displayed. If no parameter specified, system will display all ports GVRP information.

Restrictions: None.

Example usage:

To display GVRP port status:

```
DES-3528:5#show port_vlan 1-10
Command: show port_vlan 1-10

Port      PVID       GVRP           Ingress Checking     Acceptable Frame Type
-------   ----       --------       ----------------      ---------------------------
 1         1          Disabled       Enabled               All Frames

```

create dot1v_protocol_group

Purpose: Used to create a protocol group for protocol VLAN function.

Syntax: create dot1v_protocol_group group_id < id 1-16> group_name <name 32>

Description: This command creates a protocol group for protocol VLAN function.

Parameters:  
  group_id – The ID of a protocol group which is used to identify a set of protocols.
  group_name – The name of the protocol group. The maximum length is 32 characters.

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To create a protocol group:

```
DES-3528:5#create dot1v_protocol_group group_id 1 group_name General_Group
Command: create dot1v_protocol_group group_id 1 group_name General_Group

Success.

DES-3528:5#
```
config dot1v_protocol_group

**Purpose**: Used to add/delete a protocol to/from a protocol group.

**Syntax**: `config dot1v_protocol_group [group_id <id 1-16> | group_name <name 32>] [add protocol [ethernet_2 | ieee802.3_snap | ieee802.3_llc] <protocol_value> | delete protocol [ethernet_2 | ieee802.3_snap | ieee802.3_llc] <protocol_value>]`

**Description**: This command adds/deletes a protocol to/from a protocol group. The selection of a protocol can be a pre-defined protocol type or a user specified protocol type.

**Parameters**
- `group_id`: The id of protocol group which is used to identify a set of protocols.
- `group_name`: The name of the protocol group. The maximum length is 32 chars.
- `protocol_value`: The protocol value is used to identify a protocol of the frame type specified depending on the frame type, the octet string will have one of the following values: The form of the input is 0x0 to 0xffff.
  - For `ethernet_II`, this is a 16-bit (2-octet) hex value.
  - Example: IPv4 is 800, IPv6 is 86dd, ARP is 806,.. and so on.
  - For `IEEE802.3 SNAP`, this is a 16-bit (2-octet) hex value.
  - Example: IPv4 is 800, IPv6 is 86dd, ARP is 806,.. and so on.
  - For `IEEE802.3 LLC`, this is the 2-octet IEEE 802.2 Link Service Access Point (LSAP) pair: first octet for Destination Service Access Point (DSAP) and second octet for Source.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To add a protocol IPv6 to protocol group 1:

```
DES-3528:5#config dot1v_protocol_group group_id 1 add protocol Ethernet_2 86DD
Command: config dot1v_protocol_group group_id 1 add protocol Ethernet_2 86DD
Success.
DES-3528:5#
```

delete dot1v_protocol_group

**Purpose**: Used to delete a protocol group.

**Syntax**: `delete dot1v_protocol_group [group_id <id 1-16> | group_name <name 32> | all]`

**Description**: This command deletes a protocol group.

**Parameters**
- `group_id`: Specifies the group ID to be deleted.
- `group_name`: The name of the protocol group. The maximum length is 32 characters.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To delete protocol group 1:

```
DES-3528:5#delete dot1v_protocol_group group_id 1
Command: delete dot1v_protocol_group group_id 1
Success.
DES-3528:5#
```
**show dot1v_protocol_group**

**Purpose**
Used to display the protocols defined in a protocol group.

**Syntax**
```
show dot1v_protocol_group {group_id <id 1-16> | group_name <name 32>}
```

**Description**
This command displays the protocols defined in protocol groups.

**Parameters**
- `group_id` – Specifies the ID of the group to be displayed if group ID is not specified, all configured protocol groups will be displayed.
- `group_name` – The name of the protocol group. The maximum length is 32 characters.

**Restrictions**
None.

Example usage:

To display the protocol group ID 1:

```
DES-3528:5#show dot1v_protocol_group group_id 1
Command: show dot1v_protocol_group group_id 1

<table>
<thead>
<tr>
<th>Protocol Group ID</th>
<th>Protocol Group Name</th>
<th>Frame Type</th>
<th>Protocol Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>General Group</td>
<td>EthernetII</td>
<td>86DD</td>
</tr>
</tbody>
</table>

Total Entries: 1
```

**config port dot1v**

**Purpose**
Used to assign the VLAN for untagged packets which ingress from the portlist based on the protocol group configured.

**Syntax**
```
config port dot1v ports [<portlist> | all] [add protocol_group [group_id <id> | group_name <name 32>] [vlan < vlan_name 32> | vlanid <id>] {priority <value 0-7>} | delete protocol_group [group_id <id 1-16> | all]]
```

**Description**
This command assigns the VLAN for untagged packets which ingress from the portlist based on the protocol group configured. This assignment can be removed by using delete protocol_group option.

When priority is not specified in the command, the port default priority will be the priority for those untagged packets classified by the protocol VLAN.

**Parameters**
- `<portlist>` – Specifies a range of ports to apply this command.
- `group_id` – The id of protocol group which is used to identify a set of protocols.
- `group_name` – The name of the protocol group. The maximum length is 32 characters.
- `vlan` – Vlan that is to be associated with this protocol group on this port.
- `vlanid` – Specifies the VLAN ID.
- `priority` – Specifies the priority to be associated with the packet which has been classified to the specified VLAN by the protocol.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

The example is to assign VLAN marketing-1 for untagged ipv6 packet ingress from port 3.

To configure the group ID 1 on port 3 to be associated with VLAN marketing-1:
DES-3528:5# config port dot1v ports 3 add protocol_group group_id 1 vlan marketing_1
Command: config port dot1v ports 3 add protocol_group group_id 1 vlan marketing_1
Success.

DES-3528:5#

### show port dot1v

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the VLAN to be associated with untagged packet ingressed from a port based on the protocol group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show port dot1v {ports &lt;portlist&gt;}</td>

**enable pvid auto_assign**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable auto assignment of PVID.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable pvid auto_assign</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command enables the auto-assign of PVID. When this is enabled, PVID will be possibly changed by PVID or VLAN configuration. When user configures a port to VLAN X's untagged membership, this port's PVID will be updated with VLAN X. In the form of VLAN list command, PVID is updated with last item of VLAN list. When user removes a port from the untagged membership of the PVID's VLAN, the port's PVID will be assigned with “default VLAN”. The default setting is <code>enabled</code>.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable the auto-assign PVID:

```plaintext
DES-3528:5#enable pvid auto_assign
Command: enable pvid auto_assign
Success.
DES-3528:5#
```

**disable pvid auto_assign**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable auto assignment of PVID.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable pvid auto_assign</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command disables the auto-assign of PVID. When it is disabled, PVID only be changed by PVID configuration (user changes explicitly). The VLAN configuration will not automatically change PVID. The default setting is <code>enabled</code>.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the auto-assign PVID:

```plaintext
DES-3528:5#disable pvid auto_assign
Command: disable pvid auto_assign
Success.
DES-3528:5#
```

**show pvid auto_assign**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show PVID auto-assignment state.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show pvid auto_assign</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to show PVID auto-assignment state.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display PVID auto-assignment state:
DES-3528:5#show pvid auto_assign
Command: show pvid auto_assign
PVID Auto-assignment: Enabled.

DES-3528:5#

**config gvrp**

**Purpose**
Used to configure the GVRP’s timer and its MAC address format for NNI ports when used in Q-in-Q mode.

**Syntax**
```
config gvrp [timer [join | leave | leaveall] < value 100-100000> | nni_bpdu_addr [dot1d | dot1ad]]
```

**Description**
This command is used to set the GVRP’s timer and its MAC address format for NNI ports when used in Q-in-Q mode. The default value for Join time is 200 milliseconds; for Leave time is 600 milliseconds; for LeaveAll time is 10000 milliseconds.

**Parameters**
- `join` – Specifies the Join time will be set
- `leave` – Specifies the Leave time will be set
- `leaveall` – Specifies the LeaveAll time will be set
- `value` – The time value will be set. The value range is 100 to 100000 milliseconds. In addition, the Leave time should greater than 2 Join times and the LeaveAll time should greater than Leave time.
- `nni_bpdu_addr` - Uses to determine the BPDU protocol address for GVRP in service provider site. It can use 802.1d GVRP address or 802.1ad service provider GVRP address.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
```
To set the Join time to 200 milliseconds:
```

```
DES-3528:5#config gvrp timer join 200
Command: config gvrp timer join 200
Success.
DES-3528:5#
```

**show gvrp**

**Purpose**
Used to display the GVRP global setting and it’s timer’s value.

**Syntax**
```
show gvrp
```

**Description**
This command displays GVRP global setting and it’s timer’s value.

**Parameters**
None.

**Restrictions**
None.

Example usage:
```
To display the timer’s value of GVRP:
```
DES-3552:5#show gvrp
Command: show gvrp

  Global GVRP     : Disabled
  Join Time      : 200 Milliseconds
  Leave Time     : 600 Milliseconds
  LeaveAll Time  : 10000 Milliseconds
  NNI BPDU Address: dot1d

DES-3528:5#

**enable vlan_trunk**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable the VLAN trunk function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable vlan_trunk</td>
</tr>
<tr>
<td>Description</td>
<td>This command enables the VLAN trunk function. When enabled, the VLAN trunk ports shall be able to forward all tagged frames with any VID.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable the VLAN trunk:

DES-3528:5#enable vlan_trunk
Command: enable vlan_trunk
Success.

DES-3528:5#

**disable vlan_trunk**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the VLAN trunk function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable vlan_trunk</td>
</tr>
<tr>
<td>Description</td>
<td>This command disables the VLAN trunk function.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the VLAN trunk:

DES-3528:5#disable vlan_trunk
Command: disable vlan_trunk
Success.

DES-3528:5#
### config vlan_trunk ports

**Purpose**  
Used to configure a port as a VLAN trunk port.

**Syntax**  
`config vlan_trunk ports [<portlist> | all] state [enable | disable]`

**Description**  
This command is used to configure a port as a VLAN trunk port. When a port is configured as a VLAN trunk port, all tagged frames shall be able to pass through this port.

**Parameters**

- `<portlist>` – Specify a range of ports to be configured.
- `enable` – Specifies that the port is a VLAN trunk port.
- `disable` – Specifies that the port is not a VLAN trunk port.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure VLAN trunk ports:

```
DES-3528:5# config vlan_trunk ports 1-5 state enable
Command: config vlan_trunk ports 1-5 state enable
Success.
DES-3528:5#
```

### show vlan_trunk

**Purpose**  
Used to display the VLAN trunk configuration.

**Syntax**  
`show vlan_trunk`

**Description**  
This command displays the VLAN trunk configuration.

**Parameters**  
None.

**Restrictions**  
None.

**Example usage:**

To display the VLAN trunk configuration:

```
DES-3528:5# show vlan_trunk
Command: show vlan_trunk

VLAN Trunk Global Setting
----------------------------
VLAN Trunk Status   : Enabled
VLAN Trunk Member Ports : 1-5

DES-3528:5#
```
VOICE VLAN COMMANDS

The voice VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable voice_vlan</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>disable voice_vlan</td>
<td></td>
</tr>
<tr>
<td>config voice_vlan priority</td>
<td>&lt;int 0-7&gt;</td>
</tr>
<tr>
<td>config voice_vlan oui</td>
<td>[add &lt;macaddr&gt; &lt; macmask&gt; {description &lt;desc 32&gt; }</td>
</tr>
<tr>
<td>config voice_vlan ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config voice_vlan aging_time</td>
<td>&lt;min1-65535&gt;</td>
</tr>
<tr>
<td>config voice_vlan trap_log</td>
<td>[enable</td>
</tr>
<tr>
<td>show voice_vlan</td>
<td></td>
</tr>
<tr>
<td>show voice_vlan oui</td>
<td></td>
</tr>
<tr>
<td>show voice_vlan ports</td>
<td>{&lt;portlist&gt;}</td>
</tr>
<tr>
<td>show voice_vlan</td>
<td></td>
</tr>
<tr>
<td>voice_device ports</td>
<td>{&lt;portlist&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable voice_vlan**

**Purpose**

Used to enable the global voice VLAN function.

**Syntax**

`enable voice_vlan [vlan <vlan_name 32>] | vlanid <vlanid 1-4094>]`

**Description**

This command is used to enable the global voice VLAN function on the Switch. To enable the voice VLAN, the voice VLAN must be assigned to an existing static 802.1Q VLAN. The VLAN with assigned voice VLAN cannot be deleted. To change the voice VLAN, the user must disable the voice VLAN function first, and then re-issue this command. By default, the global voice VLAN state is disabled.

**Parameters**

- `<vlan_name 32>` - Specifies the voice VLAN by VLAN name.
- `vlanid <vlanid 1-4094>` - Specifies the voice VLAN by VLAN ID.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To enable a voice VLAN:

```
DES-3528:5# enable voice_vlan vlanid 1
Command: enable voice_vlan vlanid 1
Success.
DES-3528:5#
```
disable voice_vlan

Purpose: Used to disable the global voice VLAN function.
Syntax: disable voice_vlan
Description: This command disables the global voice VLAN function on the Switch. When the voice VLAN function is disabled, the voice VLAN will become unassigned.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To disable the voice VLAN:

```
DES-3528:5# disable voice_vlan
Command: disable voice_vlan
Success.
DES-3528:5#
```

config voice_vlan priority

Purpose: Used to configure voice VLAN priority.
Syntax: config voice_vlan priority <int 0-7>
Description: This command is used to configure voice VLAN priority. The voice VLAN priority will be the priority associated with the voice VLAN traffic so as to distinguish the QoS of the voice traffic from data traffic.
Parameters: <int 0-7> - Specifies the priority of the voice VLAN. It ranges from 0 to 7. The default setting is 5.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the voice VLAN priority to 6:

```
DES-3528:5# config voice_vlan priority 6
Command: config voice_vlan priority 6
Success.
DES-3528:5#
```
**config voice_vlan oui**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the user defined OUI (Organizationally Unique Identifier) of Voice device for voice VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config voice_vlan oui [add &lt;macaddr&gt; &lt; macmask&gt; {description &lt;desc 32&gt;}</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the user-defined OUI for voice traffic. The OUI is used to identify the voice traffic. There are a number of pre-defined OUIs. The user can further define the user-defined OUIs. However, the user defined OUI cannot be the same as pre-defined OUI.</td>
</tr>
</tbody>
</table>
| Parameters | - *add* – Adds a user defined OUI for a voice device vendor.  
- *delete* - Deletes a user defined OUI for a voice device vendor.  
- `<macaddr>` - Specifies the user defined OUI MAC address.  
- `<macmask>` - Specifies the user defined OUI MAC address mask.  
- `<desc 32>` - Specifies the descriptions for the user defined OUI. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To add a user defined OUI of Voice device:

```
DES-3528:5# config voice_vlan oui add 00-0A-0B-00-00-00 FF-FF-FF-00-00-00  
Success.  
DES-3528:5#
```

**config voice_vlan ports state**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable the voice VLAN function on ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config voice_vlan ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable/disable the voice VLAN function on ports.</td>
</tr>
</tbody>
</table>
| Parameters | - `<portlist>` – Specifies a range of ports to configure.  
- *all* - Specifies to configure all ports.  
- *state* – Specifies the voice VLAN function state on ports.  
  - *enable* – Enables the voice VLAN function state on ports.  
  - *disable* - Disables the voice VLAN function state on ports. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To config voice VLAN portlist 4-6 enable:

```
DES-3528:5# config voice_vlan ports 4-6 state enable  
Success.  
DES-3528:5#
```
### config voice_vlan ports mode

**Purpose**
Used to configure per port voice VLAN mode.

**Syntax**
`config voice_vlan ports <portlist> mode [auto | manual]`

**Description**
This command is used to configure per port voice VLAN mode as `auto` or `manual`. When the mode is `auto`, the port can become the voice VLAN member port by auto-learning. If the MAC address of the received packet matches the configured OUI, the port will dynamically become a member port. The dynamic membership will be removed via the aging out mechanism.

When the mode is `manual`, the port needs to be manually added into or removed from the voice VLAN by 802.1Q VLAN configuration command.

**Parameters**
- `<portlist>` – Specifies a range of ports to configure.
- `all` - Specifies to configure all ports.
- `mode` – Specifies the voice VLAN mode.
  - `auto` – If the mode is `auto`, the port can become the voice VLAN member port by auto-learning. If the MAC address of the received packet matches the configured OUI addresses, the port will dynamically become a member port. The dynamic membership will be removed via the aging out mechanism.
  - `manual` - If the mode is set to `manual`, the port needs to be manually added into or removed from the voice VLAN by 802.1Q VLAN configuration command.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To set mode auto to voice VLAN ports 3 - 5:

```
DES-3528:5# config voice_vlan ports 3-5 mode auto
Command: config voice_vlan ports 3-5 mode auto
Success.
DES-3528:5#
```

### config voice_vlan aging time

**Purpose**
Used to configure voice VLAN aging time.

**Syntax**
`config voice_vlan aging_time <min 1-65535>`

**Description**
This command is used to set the aging time of the voice VLAN. The aging time is used to remove a port from voice VLAN if the port is an dynamic VLAN member. When the last voice device stops sending traffic and the MAC address of this voice device is aged out, the voice VLAN aging timer will be started. The port will be removed from the voice VLAN after the voice VLAN timer expires. If the voice traffic resume before the aging timer expires, the aging timer will be reset.

**Parameters**
- `aging_time` – Specifies the aging time. It ranges from 1 to 65535.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To set 60 minutes as the aging time of voice VLAN:

```
DES-3528:5# config voice_vlan aging_time 60
Command: config voice_vlan aging_time 60
Success.
DES-3528:5#
```
**config voice_vlan trap_log**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to config trap/log state for voice VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config voice_vlan trap_log [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the trap/log state for voice VLAN. If there is a new voice device detected/ or a port join/leave the voice VLAN dynamically, and the trap/log is enabled, a trap/log will be triggered.</td>
</tr>
</tbody>
</table>
| Parameters | `enable` – Specifies to enable sending the issue of voice VLAN trap and log.  
`disable` - Specifies to disable sending the issue of voice VLAN trap and log. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To enable the trap state for voice VLAN:

```
DES-3528:5#config voice_vlan trap_log enable
Command: config voice_vlan trap_log enable
Success.
DES-3528:5#
```

**show voice_vlan**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display voice VLAN global information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show voice_vlan</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display voice VLAN global information.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the voice VLAN global information when voice VLAN is enabled:

```
DES-3528:5#show voice_vlan
Command: show voice_vlan

VoiceVLAN State : Enabled  
VoiceVID : 1  
VLAN Name : default  
Priority : 6  
Aging Time : 60 minutes  
Trap State : Enabled  
Log State : Enabled  
Member Ports : 1-28  
Dynamic Ports : 

DES-3528:5#
```
show voice_vlan oui

Purpose: Used to display OUI information of the voice VLAN.

Syntax: show voice_vlan oui

Description: This command is used to display OUI information of the voice VLAN.

Parameters: None.

Restrictions: None.

Example usage:

To display the OUI information of voice VLAN:

```
DES-3528:5# show voice_vlan oui
Command: show voice_vlan oui

<table>
<thead>
<tr>
<th>OUI Address</th>
<th>Mask</th>
<th>Description</th>
</tr>

show voice_vlan ports

Purpose: Used to display the mode and status of voice VLAN ports.

Syntax: show voice_vlan ports {<portlist>}

Description: This command is used to display the mode and status of voice VLAN ports.

Parameters: <portlist> - A range of port to display. If not specified, all ports' information will be displayed.

Restrictions: None.

Example usage:

To display the voice VLAN information of ports 1:1-1:5:

```
DES-3528:5# show voice_vlan ports 1:1-1:5
Command: show voice_vlan ports 1:1-1:5

<table>

DES-3528:5#
The subnet-based VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create subnet_vlan network</td>
<td>&lt;network_address&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>delete subnet_vlan</td>
<td>[network &lt;network_address&gt;</td>
</tr>
<tr>
<td>show subnet_vlan</td>
<td>{ network &lt;network_address&gt;</td>
</tr>
<tr>
<td>config vlan_precedence ports</td>
<td>&lt;portlist&gt; [mac_based_vlan</td>
</tr>
<tr>
<td>show vlan_precedence ports</td>
<td>{&lt;portlist&gt; }</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create subnet_vlan network**

**Purpose**
Used to create a subnet-based VLAN entry.

**Syntax**
create subnet_vlan network <network_address> [vlan <vlan_name 32> | vlanid <vidlist> | all ]

**Description**
This command is used to create a subnet-based VLAN entry. A subnet-based VLAN entry is an IP subnet-based VLAN classification rule. If an untagged or priority-tagged IP packet enters a switch port, its source IP address will be compared with the subnet-based VLAN entries. If the source IP matches the subnet entry, the packet will be classified to the VLAN defined for this subnet.

**Parameters**
- **network** – Specifies an IPv4 network address. The format is ipaddress/prefix length.
- **vlan** – The VLAN to be associated with the subnet. You can specify a VLAN name or VLAN ID. The VLAN must be existed static VLAN.
- **priority** – Specifies the priority to be associated with the subnet. It ranges from 0 to 7.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

This example shows how to create a subnet-based VLAN entry.

```
DES-3528:5# create subnet_vlan network 172.168.1.1/24 vlan default priority 2
Command: create subnet_vlan network 172.168.1.1/24 vlan default priority 2
Success.

DES-3528:5#
```
**delete subnet_vlan**

**Purpose**
Use this command to delete subnet-based VLAN entry.

**Syntax**
delete subnet_vlan [network <network_address> | vlan <vlan_name 32> | vlanid <vidlist> | all ]

**Description**
This command is used to delete subnet-based VLAN entry.

**Parameters**
- **network** – Specifies an IPv4 network address. The format is ipaddress/prefix length.
- **vlan** – The VLAN to be associated with the subnet. You can specify a VLAN name or VLAN ID. The VLAN must be existed static VLAN.
- **vlanid** – Specifies a list of VLAN ID.
- **all** – Specifies to delete all subnet-based VLAN entries.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete a subnet-based VLAN entry:

```
DES-3528:5#delete subnet_vlan network 172.168.1.1/24
Command: delete subnet_vlan network 172.168.1.1/24
Success.
DES-3528:5#
```

**show subnet_vlan**

**Purpose**
Use to display subnet-based VLAN information.

**Syntax**
show subnet_vlan { network <network_address> | vlan <vlan_name 32> | vlanid <vidlist>}

**Description**
This command is used to display subnet-based VLAN information. If no parameter specified, the command will display all subnet-based VLAN entries.

**Parameters**
- **network** – Specifies an IPv4 network address. The format is ipaddress/prefix length.
- **vlan** – The VLAN to be associated with the subnet. You can specify a VLAN name or VLAN ID. The VLAN must be existed static VLAN.
- **vlanid** – Specifies a list of VLAN ID.

**Restrictions**
None.

**Example usage:**
To display the subnet-based VLAN:

```
DES-3528:5#show subnet_vlan
Command: show subnet_vlan

<table>
<thead>
<tr>
<th>IP Address/Subnet mask</th>
<th>VLAN</th>
<th>Priority</th>
</tr>
</thead>
<tbody>
<tr>
<td>172.168.1.0/255.255.255.0</td>
<td>1</td>
<td>0</td>
</tr>
</tbody>
</table>

Total Entries: 1

DES-3528:5#
```
### Config VLAN Precedence Ports

**Purpose**: Use to configure VLAN classification precedence.

**Syntax**: `config vlan_precedence ports <portlist> [mac_based_vlan | subnet_vlan]`

**Description**: This command is used to configure VLAN classification precedence on each port. You can specify MAC-based VLAN classification or subnet-based VLAN classification.

If a port's VLAN classification is set to MAC-based VLAN precedence and a packet matches both MAC-based VLAN and subnet-based VLAN entry, the packet will be processed based on MAC-based VLAN entry.

If a port's VLAN classification is set to subnet-based VLAN precedence and a packet matches both MAC-based and subnet-based VLAN entries, the packet will be processed based on subnet-based VLAN entry.

**Parameters**
- `<portlist>` – Specify a range of ports to be configured.
- `mac_based_vlan` – Specifies to precede subnet-based VLAN classification.
- `subnet_vlan` – Specifies to precede MAC-based VLAN classification.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

#### Example usage:

To configure subnet-based VLAN classification precedence on port 1:

```
DES-3528:5#config vlan_precedence ports 1 subnet_vlan
Command: config vlan_precedence ports 1 subnet_vlan
Success.
DES-3528:5#
```

### Show VLAN Precedence Ports

**Purpose**: Use to display VLAN classification precedence.

**Syntax**: `show vlan_precedence ports {<portlist>}`

**Description**: This command is used to display VLAN classification precedence.

**Parameters**
- `<portlist>` – Specify a port or a range of ports to be configured.

**Restrictions**: None.

#### Example usage:

To display the subnet-based VLAN classification precedence:

```
DES-3528:5#show vlan_precedence ports 1
Command: show vlan_precedence ports 1

Port   VLAN Precedence
-----  ------------------
1      Subnet VLAN

DES-3528:5#
```
The asymmetric VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable asymmetric_vlan</td>
<td></td>
</tr>
<tr>
<td>disable asymmetric_vlan</td>
<td></td>
</tr>
<tr>
<td>show asymmetric_vlan</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable asymmetric_vlan**

**Purpose**

Used to enable the asymmetric VLAN function on the Switch.

**Syntax**

`enable asymmetric_vlan`

**Description**

This command enables the asymmetric VLAN function on the Switch.

**Parameters**

None.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To enable asymmetric VLANs:

```
DES-3528:5#enable asymmetric_vlan
Command: enable asymmetric_vlan
Success.
DES-3528:5#
```

**disable asymmetric_vlan**

**Purpose**

Used to disable the asymmetric VLAN function on the Switch.

**Syntax**

`disable asymmetric_vlan`

**Description**

This command disables the asymmetric VLAN function on the Switch.

**Parameters**

None.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To disable asymmetric VLANs:

```
DES-3528:5#disable asymmetric_vlan
Command: disable asymmetric_vlan
Success.
DES-3528:5#
```
### show asymmetric_vlan

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to view the asymmetric VLAN state on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show asymmetric_vlan</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the asymmetric VLAN state on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

#### Example usage:

To display the asymmetric VLAN state currently set on the Switch:

```
DES-3528:5#show asymmetric_vlan
Command: show asymmetric_vlan

Asymmetric VLAN: Enabled

DES-3528:5#
```
LINK AGGREGATION COMMANDS

The link aggregation commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create link_aggregation</td>
<td>group_id &lt;value 1-8&gt; {type [lacp</td>
</tr>
<tr>
<td>delete link_aggregation</td>
<td>group_id &lt;value 1-8&gt;</td>
</tr>
<tr>
<td>config link_aggregation</td>
<td>group_id &lt;value 1-8&gt; {master_port &lt;port&gt;</td>
</tr>
<tr>
<td>config link_aggregation</td>
<td>algorithm [mac_source</td>
</tr>
<tr>
<td>show link_aggregation</td>
<td>{group_id &lt;value 1-8&gt;</td>
</tr>
<tr>
<td>config lACP_port</td>
<td>&lt;portlist&gt; mode [active</td>
</tr>
<tr>
<td>show lACP_port</td>
<td>{&lt;portlist&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

create link_aggregation

Purpose
Used to create a link aggregation group on the Switch.

Syntax
create link_aggregation group_id <value 1-8> {type [lacp | static]}

Description
This command will create a link aggregation group with a unique identifier. The group number identifies each of the groups.

Parameters
- <value> – Specifies the group ID. The Switch allows up to eight link aggregation groups to be configured. The group number identifies each of the groups.
- type – Specify the type of link aggregation used for the group. If the type is not specified the default type is static.
  - lacp – This designates the port group as LACP compliant. LACP allows dynamic adjustment to the aggregated port group. LACP compliant ports may be further configured (see config lACP_port). LACP compliant must be connected to LACP compliant devices.
  - static – This designates the aggregated port group as static. Static port groups cannot be changed as easily as LACP compliant port groups since both linked devices must be manually configured if the configuration of the trunked group is changed. If static link aggregation is used, be sure that both ends of the connection are properly configured and that all ports have the same speed/duplex settings.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To create a link aggregation group:

DES-3528:5# create link_aggregation group_id 1
Command: create link_aggregation group_id 1
Success.

DES-3528:5#
**delete link_aggregation**

**Purpose**  
Used to delete a previously configured link aggregation group.

**Syntax**  
```
delete link_aggregation group_id <value 1-8>
```

**Description**  
This command is used to delete a previously configured link aggregation group.

**Parameters**  
- `<value 1-8>`: Specifies the group ID. The Switch allows up to eight link aggregation groups to be configured. The group number identifies each of the groups.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To delete link aggregation group:

```
DES-3528:5#delete link_aggregation group_id 6
Command: delete link_aggregation group_id 6
Success.
DES-3528:5#
```

---

**config link_aggregation**

**Purpose**  
Used to configure a previously created link aggregation group.

**Syntax**  
```
config link_aggregation group_id <value 1-8> {master_port <port> | ports <portlist> | state [enable | disable] }{1}
```

**Description**  
This command allows users to configure a link aggregation group that was created with the `create link_aggregation` command above.

**Parameters**  
- `group_id <value 1-8>`: Specifies the group ID. The Switch allows up to 8 link aggregation groups to be configured. The group number identifies each of the groups.
- `master_port <port>`: Master port ID. Specifies which port (by port number) of the link aggregation group will be the master port. All of the ports in a link aggregation group will share the port configuration with the master port.
- `ports <portlist>`: Specifies a port or range of ports that will belong to the link aggregation group.
- `state [enable | disable]`: Allows users to enable or disable the specified link aggregation group.

**Restrictions**  
Only Administrator and Operator-level users can issue this command. Link aggregation groups may not overlap.

**Example usage:**

To define a load-sharing group of ports, group-id 1, master port 5 with group members ports 5-7 plus port 9:

```
DES-3528:5#config link_aggregation group_id 1 master_port 5 ports 5-7, 9
Command: config link_aggregation group_id 1 master_port 5 ports 5-7, 9
Success.
DES-3528:5#
```
config link_aggregation algorithm

**Purpose**
Used to configure the link aggregation algorithm.

**Syntax**
```
config link_aggregation algorithm [mac_source | mac_destination | mac_source_dest | ip_source | ip_destination | ip_source_dest]
```

**Description**
This command configures the part of the packet examined by the Switch when selecting the egress port for transmitting load-sharing data. This feature is only available using the address-based load-sharing algorithm.

**Parameters**
- `mac_source` – Indicates that the Switch should examine the MAC source address.
- `mac_destination` – Indicates that the Switch should examine the MAC destination address.
- `mac_source_dest` – Indicates that the Switch should examine the MAC source and destination addresses.
- `ip_source` – Indicates that the Switch should examine the IP source address.
- `ip_destination` – Indicates that the Switch should examine the IP destination address.
- `ip_source_dest` – Indicates that the Switch should examine the IP source address and the destination address.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure link aggregation algorithm for mac-source-dest:

```
DES-3528:5#config link_aggregation algorithm mac_source_dest
Command: config link_aggregation algorithm mac_source_dest
Success.
DES-3528:5#
```

show link_aggregation

**Purpose**
Used to display the current link aggregation configuration on the Switch.

**Syntax**
```
show link_aggregation (group_id <value 1-8> | algorithm)
```

**Description**
This command will display the current link aggregation configuration of the Switch.

**Parameters**
- `<value 1-8>` – Specifies the group ID. The Switch allows up to 8 link aggregation groups to be configured. The group number identifies each of the groups.
- `algorithm` – Allows users to specify the display of link aggregation by the algorithm in use by that group.

**Restrictions**
None.

Example usage:
To display Link Aggregation configuration:
DES-3528:5#show link_aggregation
Command: show link_aggregation
Link Aggregation Algorithm = mac_source_dest

Group ID : 1
Type : LACP
Master Port : 1
Member Port : 1–8
Active Port : 7
Status : Enabled
Flooding Port : 7
Total Entries : 1

DES-3528:5#

---

**config lacp_ports**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure settings for LACP compliant ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config lacp_ports &lt;portlist&gt; mode [active</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure ports that have been previously designated as LACP ports (see <code>create link_aggregation</code>).</td>
</tr>
</tbody>
</table>
| Parameters |  <portlist> – Specifies a port or range of ports to be configured.  
| | mode – Select the mode to determine if LACP ports will process LACP control frames.  
| | • active – Active LACP ports are capable of processing and sending LACP control frames. This allows LACP compliant devices to negotiate the aggregated link so the group may be changed dynamically as needs require. In order to utilize the ability to change an aggregated port group, that is, to add or subtract ports from the group, at least one of the participating devices must designate LACP ports as active. Both devices must support LACP.  
| | • passive – LACP ports that are designated as passive cannot process LACP control frames. In order to allow the linked port group to negotiate adjustments and make changes dynamically, at one end of the connection must have “active” LACP ports (see above). |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure LACP port mode settings:

DES-3528:5#config lacp_port 1-12 mode active
Command: config lacp_port 1-12 mode active
Success.

DES-3528:5#
show lacp_port

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display current LACP port mode settings.</th>

<td>Active</td>
</tr>
</tbody>
</table>

DES-3528:5#
```
The IP network layer uses a four-byte IP address. The Ethernet link layer uses a six-byte MAC address. Binding these two address types together allows the transmission of data between the layers. The primary purpose of IP–MAC–Port Binding is to restrict the access to a switch to a number of authorized users. Only the authorized client can access the Switch’s port by checking the pair of IP–MAC addresses with the pre-configured white list. If an unauthorized user tries to access an IMPB-enabled port, the system will block the access by dropping its packet. The maximum number of IP–MAC–Port Binding entries is dependant on chip capability (e.g. the ARP table size) and storage size of the device. For the DES-3528 Series, the maximum number of IP-MAC Binding entries is 511. The creation of authorized IP-MAC pairs can be manually configured by CLI or Web, or can be leaned automatically when DHCP snooping is enabled. The function is port-based, meaning a user can enable or disable the function on the individual port.

**ACL Mode**

Due to some special cases that have arisen with the IP–MAC–Port Binding, this Switch has been equipped with a special ACL Mode for IP–MAC–Port Binding. When enabled, the Switch will create one entry in the Access Profile Table. The entry may only be created if there are at least a Profile ID available on the Switch. If not, when the ACL Mode is enabled, an error message will be prompted to the user. When the ACL Mode is enabled, the Switch will only accept packets from a created entry in the IP-MAC-Port Binding Setting window. All others will be discarded. The function is port-based, meaning a user can enable or disable the function on the individual port.

To configure the ACL mode, the user must first set up IP-MAC-Port binding using the create address_binding ip_mac ipaddress command to create an entry. Then the user must enable the mode by entering the config address_binding ports <portlist> mode acl command.

**NOTE:** When configuring the ACL mode function of the IP–MAC–Port Binding function, please pay close attention to previously set ACL entries. Since the ACL mode is enabled, it adds the last available access profile ID to the ACL table, and the first ACL mode entry takes precedence over later entries. This may render some user-defined ACL parameters inoperable due to the overlapping of settings combined with the ACL entry priority (defined by profile ID). For more information on ACL settings, please refer to “Access Control List (ACL) Commands” section in this manual.

**NOTE:** Once ACL profiles have been created by the Switch through the IP–MAC–Port Binding function, the user cannot modify, delete or add ACL rules to these ACL mode access profile entries. Any attempt to modify, delete or add ACL rules will result in a configuration error as seen in the previous figure.

**NOTE:** When downloading configuration files to the Switch, be aware of the ACL configurations loaded, as compared to the ACL mode access profile entries set by this function, which may cause both access profile types to experience problems.

The IP–MAC–Port Binding commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.
<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create address_binding ip_mac ipaddress</td>
<td>&lt;ipaddr&gt; mac_address &lt;macaddr&gt; {ports [ &lt;portlist&gt;</td>

<tr>
<td>config address_binding recover_learning ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### create address_binding ip_mac ipaddress

**Purpose**

Used to create an IP–MAC–Port Binding entry in the white list.

**Syntax**

```
create address_binding ip_mac ipaddress <ipaddr> mac_address <macaddr> {ports [ <portlist> | all] | mode [ arp | acl ]}
```

**Description**

This command is used to create an IP–MAC–Port Binding entry.

**Parameters**

- `<ipaddr>` – The IP address of the device where the IP–MAC–Port Binding is made.
- `<macaddr>` – The MAC address of the device where the IP–MAC–Port binding is made.
- `<portlist>` – Specifies a port or range of ports to be configured for address binding.
- `all` – Specifies that all ports on the switch will be configured for address binding.
- `mode` – This command is used to be compatible with Release 1 CLI firmware.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To create address binding entry on the Switch:
Once an entry has been created and some IMPB-enabled ports (ACL mode) belong to this entry, the access profile table will look like this:

```
DES-3528:5# create address_binding ip_mac ipaddress 10.1.1.3 mac_address 00-00-00-00-00-04
Command: create address_binding ip_mac ipaddress 10.1.1.3 mac_address 00-00-00-00-00-04
Success.
DES-3528:5#
```

The `show access_profile` command will display the one access profile created and their corresponding rules for every port on the Switch.

```
DES-3528:5# show access_profile
Command: show access_profile

### config address_binding ip_mac ipaddress

**Purpose**  
Used to configure an IP–MAC–Port Binding entry.

**Syntax**  
```
config address_binding ip_mac ipaddress <ipaddr> mac_address <macaddr> {ports [<portlist> | all]}
```

**Description**  
This command is used to configure an IP–MAC–Port Binding entry.

**Parameters**  
- `<ipaddr>` – The IP address of the device where the IP–MAC–Port binding is made.
- `<macaddr>` – The MAC address of the device where the IP–MAC–Port binding is made.
- `<portlist>` – Specifies a port or range of ports to be configured for address binding, if no port is specified it will apply to all ports.
  - `all` – Specifies that all ports on the switch will be configured for address binding.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure address binding entry on the Switch:

```
DES-3528:5#config address_binding ip_mac ipaddress 10.1.1.3 mac_address 00-00-00-00-00-05
Command: config address_binding ip_mac ipaddress 10.1.1.3 mac_address 00-00-00-00-00-05
Success.
DES-3528:5#
```

### config address_binding ip_mac ports

**Purpose**  
Used to configure IMPB settings for specified ports.

**Syntax**  
```
```

**Description**  
This command is used to configure the per-port state of IP-MAC binding on the Switch. If a port has been configured as a group member of an aggregated link, then it cannot enable the IP-MAC binding function.

When IMPB is enabled on a port, IP packets and ARP packets received by this port will be checked depending on the setting. The packet will be dropped if its IP-MAC pair does not match the IMPB white list.

IMPB allows the user to choose either ARP or ACL mode. In ARP Mode, a switch performs ARP Packet Inspection in which it checks the IP-MAC pairs in ARP packets with the IMPB white list and denies unauthorized ones. An advantage of ARP mode is that it does not consume any ACL rules on the Switch. Nonetheless, since the switch only checks ARP packets, it cannot block unauthorized clients who do not send out ARP packets. In ACL Mode, a switch performs IP Packet Inspection in addition to ARP Packet Inspection. ACL rules will be used to permit statically configured IMPB entries and deny other IP packets with the incorrect IP-MAC pairs. The distinct advantage of ACL Mode is that it ensures better security by checking both ARP Packets and IP Packets. However, doing so requires the use of ACL rules. ACL Mode can be viewed as an enhanced version of ARP Mode because ARP Mode is enabled by default when ACL Mode is selected.

There are also two port states: Strict and Loose, and only one state can be selected per port. If a port is set to Strict state, all packets sent to the port are denied (dropped) by default. The Switch will continuously compare all IP and ARP packets it receives on that port with its IMPB entries. If the IP-MAC pair in the packet matches the IMPB entry, the MAC address will be unblocked and subsequent packets sent from this client will be forwarded. On the other hand, if a port is set to Loose state, all packets entering the port are permitted (forwarded) by default. The Switch will continuously compare all ARP packets. If the IMPB entry in the packet matches the IMPB entry, the Switch will forward the packet. Otherwise, the packet will be dropped.
### `config address_binding ip_mac ports`

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>state</code></td>
<td>Configures the address binding port state to enable or disable. When the state is enabled, the port will perform the binding check.</td>
</tr>
<tr>
<td><code>strict</code></td>
<td>This state provides a stricter method of control. If the user selects this mode, all packets are blocked by the Switch by default. The Switch will compare all incoming ARP and IP Packets and attempt to match them against the IMPB white list. If the IP-MAC pair matches the white list entry, the packets from that MAC address are unblocked. If not, the MAC address will stay blocked. While the Strict state uses more CPU resources from checking every incoming ARP and IP packet, it enforces better security and is thus the recommended setting. The packet isn't found by the entry, the MAC will be set to block. Other packets will be dropped. The default mode is strict if not specified.</td>
</tr>
<tr>
<td><code>loose</code></td>
<td>This mode provides a looser way of control. If the user selects loose mode, the Switch will forward all packets by default. However, it will still inspect incoming ARP packets and compare them with the Switch's IMPB white list entries. If the IP-MAC pair of a packet is not found in the white list, the Switch will block the MAC address. A major benefit of Loose state is that it uses less CPU resources because the Switch only checks incoming ARP packets. However, it also means that Loose state cannot block users who send only unicast IP packets. An example of this is that a malicious user can perform DoS attacks by statically configuring the ARP table on their PC. In this case, the Switch cannot block such attacks because the PC will not send out ARP packets.</td>
</tr>
<tr>
<td><code>allow_zeroip</code></td>
<td>Specifies whether to allow ARP packets with Source IP address 0.0.0.0. When enabled on a port, all ARP packets with a source IP address of 0.0.0.0 is forwarded; when set to disable, they are blocked.</td>
</tr>
<tr>
<td><code>forward_dhcppkt</code></td>
<td>By default, the Switch will forward all DHCP packets. However, if the port state is set to Strict, all DHCP packets will be dropped. In that case, enable <code>forward_dhcppkt</code> so that the port will forward DHCP packets even under Strict state. Enabling this feature also ensures that DHCP snooping works properly.</td>
</tr>
<tr>
<td><code>mode</code></td>
<td>select to port to use ARP mode or ACL mode. When a port is under ACL mode, the switch will create ACL access entry corresponding to the entries of this port. If the port mode changes to ARP, all the ACL access entries will be deleted automatically. The default mode of the port is ARP mode.</td>
</tr>
<tr>
<td><code>stop_learning_threshold &lt;value 0-500&gt;</code></td>
<td>Enter a stop learning threshold between 0 and 500. Entering 500 means the port will enter the stop learning state after 500 illegal MAC entries and will not allow additional MAC entries, both legal or illegal, to be learned on this port. In the stop learning state, the port will also automatically purge all blocked MAC entries on this port. Traffic from legal MAC entries are still forwarded. Entering 0 means no limit has been set and the port will keep learning illegal MAC addresses.</td>
</tr>
<tr>
<td><code>&lt;portlist&gt;</code></td>
<td>Specifies a port or range of ports to be configured.</td>
</tr>
<tr>
<td><code>all</code></td>
<td>Specifies all ports on the switch.</td>
</tr>
</tbody>
</table>

### Restrictions

Only Administrator and Operator-level users can issue this command.

### Example usage:

To enable port 1 address_binding state:

```
DES-3528:5#config address_binding ip_mac ports 1 state enable
Command: config address_binding ip_mac ports 1 state enable
Success.
```

To enable port 1 address_binding state and set mode to acl:

```
DES-3528:5#config address_binding ip_mac ports 1 mode acl
Success.
```

```
To enable port 1 address_binding state and set stop_learning_threshold to 60:

```
DES-3528:5#config address_binding ip_mac ports 1 state enable stop_learning_threshold 60
Command: config address_binding ip_mac ports 1 state enable stop_learning_threshold 60
Success.
DES-3528:5#
```

---

**show address_binding**

**Purpose**

Used to show address binding entries, blocked MAC entries, and port status.

**Syntax**

```
show address_binding {
[ ip_mac [all | ipaddress <ipaddr> mac_address <macaddr>] |
 blocked [all | vlan_name <vlan_name> mac_address <macaddr>] |
 ports ]
```

**Description**

This command is used to display IP–MAC–Port Binding entries. Three different kinds of information can be viewed:

- `ip_mac` – Address Binding entries can be viewed by entering the MAC and IP addresses of the device.
- `blocked` – Blocked address binding entries (bindings between VLAN names and MAC addresses) can be viewed by entering the VLAN name and the MAC address of the device.
- `ports` – Address binding status of all ports can be viewed.

**Parameters**

- `all` – Displays all IP-MAC-Port binding entries; for Blocked Address Binding entries, `all` specifies all the blocked VLANs and their bound MAC addresses.
- `<ipaddr>` – The IP address of the device where the IP–MAC–Port binding is made.
- `<macaddr>` – The MAC address of the device where the IP–MAC–Port binding is made.
- `<vlan_name>` – The VLAN name of the VLAN that is bound to a MAC address in order to block a specific device on a known VLAN.

**Restrictions**

None.

Example usage:

To show IP–MAC–Port Binding global configuration:
To show IP–MAC–Port Binding entries:

```
DES-3528:5#show address_binding ip_mac all
Command: show address_binding ip_mac all

<table>
<thead>
<tr>
<th>IP Address</th>
<th>MAC Address</th>
<th>Mode</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>10.1.1.3</td>
<td>00-00-00-00-00-05</td>
<td>Static</td>
<td>1-28</td>
</tr>
</tbody>
</table>

Total Entries : 1
```

To show IP–MAC–Port Binding blocked MAC entries:

```
DES-3528:5#show address_binding blocked all
Command: show address_binding blocked all

<table>
<thead>
<tr>

</table>
delete address_binding

Purpose
Used to delete IP–MAC–Port Binding entries and blocked MAC entries.

Syntax
delete address_binding [ip_mac [ipaddress <ipaddr> mac_address <macaddr> | all] | blocked [all | vlan_name <vlan_name> mac_address <macaddr>]]

Description
This command is used to delete IP–MAC–Port Binding entries. Two different kinds of information can be deleted.

- **ip_mac** – Individual Address Binding entries can be deleted by entering the MAC and IP addresses of the device. Toggling to all will delete all the Address Binding entries.

- **blocked** – Blocked MAC entries (bindings between VLAN names and MAC addresses) can be deleted by entering the VLAN name and the MAC address of the device. To delete all the blocked MAC entries, toggle all.

Parameters

- **<ipaddr>** – The IP address of the device where the IP–MAC–Port Binding is made.
- **<macaddr>** – The MAC address of the device where the IP–MAC–Port Binding is made.
- **<vlan_name>** – The VLAN name of the VLAN that is bound to a MAC address in order to block a specific device on a known VLAN.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To delete an IP–MAC–Port Binding entry on the Switch:

```
DES-3528:5#delete address_binding ip_mac ipaddress 10.1.1.1 mac_address 00-00-00-00-00-06
Command: delete address_binding ip_mac ipaddress 10.1.1.1 mac_address 00-00-00-00-00-06
Success.

DES-3528:5#
```
enable address_binding trap_log

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable the trap log for the IP–MAC–Port Binding function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable address_binding trap_log</td>
</tr>
<tr>
<td>Description</td>
<td>This command, along with the disable address_binding trap_log will enable and disable the sending of trap log messages for IMPB. When enabled, the Switch will send a trap / log message when an ARP packet is received that doesn’t match the IMPB white list.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable address binding trap log on the Switch:

DES-3528:5#enable address_binding trap_log
Command: enable address_binding trap_log
Success.

DES-3528:5#

disable address_binding trap_log

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the trap log for the IP–MAC–Port Binding function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable address_binding trap_log</td>
</tr>
<tr>
<td>Description</td>
<td>This command, along with the enable address_binding trap_log, will enable and disable the sending of trap log messages for IMPB. When disabled, the Switch will not send trap / log messages.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable address binding trap log on the Switch:

DES-3528:5#disable address_binding trap_log
Command: disable address_binding trap_log
Success.

DES-3528:5#
**debug address_binding**

**Purpose**
Used to configure the address binding debugging feature on the Switch.

**Syntax**
```
debug address_binding [event | dhcp | all ]
```

**Description**
This command is used to configure the IPMB debugging feature. The debugging feature is disabled by default.

**Parameters**
- `event` – The Switch will print out the debug messages when an IMPB module receives ARP/IP packets.
- `dhcp` – The Switch will print out the debug messages when the IMPB module receives the DHCP packets.
- `all` – The Switch will print out all debugging messages.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To open the debug event:

```
DES-3528:5#debug address_binding event
Command: debug address_binding event
Success.
DES-3528:5#
```

**no debug address_binding**

**Purpose**
Used to disable IMPB debugging on the Switch.

**Syntax**
```
no debug address_binding
```

**Description**
This command is used to disable IMPB debugging on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To close the debug:

```
DES-3528:5#no debug address_binding
Command: no debug address_binding
Success.
DES-3528:5#
```
enable address_binding dhcp_snoop

Purpose
Used to enable the DHCP snooping option for IMPB.

Syntax
enable address_binding dhcp_snoop

description
If DHCP snooping is enabled, the Switch learns IP-MAC pairs by snooping DHCP packets automatically and then saves them to the IP-MAC-Port Binding white list. This enables a hassle-free configuration because the administrator does not need to manually enter each IMPB entry. A prerequisite for this is that the valid DHCP server’s IP-MAC pair must be configured on the Switch’s IMPB while list first; otherwise the DHCP server packets will be dropped. DHCP snooping is generally considered to be more secure because it enforces all clients to acquire IP through the DHCP server. Additionally, it makes IP Information auditable because clients cannot manually configure their own IP address.

Each DHCP-snooped entry is associated with a lease time. When the lease time expires, the expired entry will be removed from this port. The auto-learned binding entry can be moved from one port to another port if the DHCP snooping function has learned that the MAC address is moved to a different port.

In order to avoid conflict where both static entry and DHCP Snooping entry are the same, DHCP Snooping entries will not be created if the IP-MAC entry has already been statically configured.

Parameters
None.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable the address binding DHCP snooping mode:

```
DES-3528:5#enable address_binding dhcp_snoop
Command: enable address_binding dhcp_snoop
Success.
DES-3528:5#
```

disable address_binding dhcp_snoop

Purpose
Used to disable the DHCP snooping option for IMPB.

Syntax
disable address_binding dhcp_snoop

description
When the DHCP snoop function is disabled, all of the auto-learned binding entries will be removed.

Parameters
None.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To disable the address binding DHCP snooping mode:

```
DES-3528:5#disable address_binding dhcp_snoop
Command: disable address_binding dhcp_snoop
Success.
DES-3528:5#
```
### clear address_binding dhcp_snoop binding_entry

**Purpose**
Used to clear DHCP snooping entries on specified ports.

**Syntax**
clear address_binding dhcp_snoop binding_entry ports [<portlist> | all]

**Description**
This command is used to clear the DHCP snooping entries learned for the specified ports.

**Parameters**
- **ports** – Specifies the list of ports on which to clear the DHCP snooping entries.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To clear address binding DHCP snooping entries:

```
DES-3528:5#clear address_binding dhcp_snoop binding_entry ports 1-3
Command: clear address_binding dhcp_snoop binding_entry ports 1-3
Success.
```

### show address_binding dhcp_snoop

**Purpose**
Used to show DHCP snooping database.

**Syntax**
show address_binding dhcp_snoop {
max_entry { ports <portlist> } | 
binding_entry {port <port>}}

**Description**
This command is used to display DHCP snooping database.

**Parameters**
- **max_entry** – Displays the max number of entries which can be learned by dhcp snooping on the specified ports.
- **binding_entry** – Displays the DHCP snooping entries on the specified port.

**Restrictions**
None.

**Example usage:**

To display address binding DHCP snooping status:

```
DES-3528:5#show address_binding dhcp_snoop
Command: show address_binding dhcp_snoop
DHCP_Snoop : Disabled
```

To display address binding DHCP snooping entries:

**NOTE:** “Inactive” indicated that the entry is currently inactive due to port link down.
DES-3528:5#show address_binding dhcp_snoop binding_entry
Command: show address_binding dhcp_snoop binding_entry

DES-3528:5#

**config address_binding dhcp_snoop max_entry ports**

- **Purpose**: Used to specify the maximum number of entries which can be dynamically learned (DHCP snooping) by the specified ports.
- **Syntax**: `config address_binding dhcp_snoop max_entry ports [<portlist> | all] limit [<value 1-50> | no_limit]`
- **Description**: This command is used to specify the maximum number of DHCP snooping entries on specified ports. By default, the per-port maximum entry has no limit.
- **Parameters**:
  - `portlist` – Specifies the list of ports to be configured for the DHCP snooping maximum learned entry.
  - `limit` – Specifies the maximum number.
- **Restrictions**: Only Administrator and Operator-level users can issue this command.
Example usage:

To set the maximum number of entries that ports 1-3 can learn to 10:

```
DES-3528:5# config address_binding dhcp_snoop max_entry ports 1-3 limit 10
Command: config address_binding dhcp_snoop max_entry ports 1-3 limit 10
Success.
DES-3528:5#
```

```
config address_binding recover_learning ports
```

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Use to recover a port from the stop learning state to the normal state.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config address_binding recover_learning ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to recover the port back to normal state, under which the port will start learning both illegal and legal MAC addresses again.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>portlist</code> – Specifies the list of ports to recover from stopped learning mode.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure address binding recover learning ports:

```
DES-3528:5# config address_binding recover_learning ports 6-7
Command: config address_binding recover_learning ports 6-7
Success.
DES-3528:5#
```
LIMITED IP MULTICAST ADDRESS

The Limited IP Multicast command allows the administrator to permit or deny access to a port or range of ports by specifying a range of multicast addresses. The Limited IP Multicast Commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create mcast_filter_profile</td>
<td>profile_id &lt;value 1-24&gt; profile_name &lt;name 1-32&gt;</td>
</tr>
<tr>
<td>config mcast_filter_profile</td>
<td>[profile_id &lt;value 1-24&gt;</td>
</tr>
<tr>
<td>delete mcast_filter_profile</td>
<td>[&lt;value 1-24&gt;</td>
</tr>
<tr>
<td>delete mcast_filter_profile</td>
<td>profile_name &lt;name 1-32&gt;</td>
</tr>
<tr>
<td>show mcast_filter_profile</td>
<td>{{profile_id &lt;value 1-24&gt;</td>
</tr>
<tr>
<td>config limited_multicast_addr</td>
<td>[ports &lt;portlist &gt;</td>
</tr>
<tr>
<td>show limited_multicast_addr</td>
<td>[ports &lt;portlist &gt;</td>
</tr>
<tr>
<td>config max_mcast_group</td>
<td>[ports &lt;portlist &gt;</td>
</tr>
<tr>
<td>show max_mcast_group</td>
<td>[ports &lt;portlist &gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create mcast_filter_profile profile_id**

**Purpose**: Used to create a multicast address profile.

**Syntax**: `create mcast_filter_profile profile_id <value 1-24> profile_name <name 1-32>`

**Description**: This command configures a multicast address profile. Multiple ranges of multicast addresses can be defined in the profile.

**Parameters**:
- **profile_id** – ID of the profile. The range is 1 to 24.
- **profile_name** – Provides a meaningful description for the profile.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To create a multicast filter profile:

```
DES-3528: 5#create mcast_filter_profile profile_id 2 profile_name MOD
Command: create mcast_filter_profile profile_id 2 profile_name MOD
Success.
```

**DES-3528:5#**
config mcast_filter_profile

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to add or delete a range of multicast addresses to the profile.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config mcast_filter_profile [profile_id &lt; value 1-24&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the user to add or delete a range of multicast IP addresses previously defined.</td>
</tr>
<tr>
<td>Parameters</td>
<td>profile_id – ID of the profile. The range is 1 to 24.</td>
</tr>
<tr>
<td></td>
<td>profile_name – Provides a meaningful description for the profile.</td>
</tr>
<tr>
<td></td>
<td>mcast_address_list – List of the multicast addresses to be put in the profile.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>You can either specify a single multicast IP address or a range of multicast addresses using</td>
</tr>
<tr>
<td></td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To config a multicast filter profile:

DES-3528: 5#config mcast_filter_profile profile_id 2 add 225.1.1.1 - 225.1.1.1
Command: config mcast_filter_profile profile_id 2 add 225.1.1.1 - 225.1.1.1
Success.

DES-3528:5#

delete mcast_filter_profile profile_id

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a multicast address profile.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>delete mcast_filter_profile profile_id [ &lt;value 1-24&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command deletes a multicast address profile</td>
</tr>
<tr>
<td>Parameters</td>
<td>profile_id – ID of the profile</td>
</tr>
<tr>
<td></td>
<td>all – All multicast address profiles will be deleted.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete a multicast filter profile:

DES-3528: 5#delete mcast_filter_profile profile_id 3
Command: delete mcast_filter_profile profile_id 3
Success.

DES-3528:5#

delete mcast_filter_profile profile_name

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a multicast profile name.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>delete mcast_filter_profile profile_name &lt;name 1-32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command deletes a multicast profile.</td>
</tr>
<tr>
<td>Parameters</td>
<td>profile_name &lt;name 1-32&gt; – Name of the profile.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>
Example usage:

To delete a multicast filter profile name:

```
DES-3528: 5#delete mcast_filter_profile profile_name 123
Command: delete mcast_filter_profile profile_name 123
Success.
DES-3528:5#
```

**show mcast_filter_profile**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the defined multicast address profiles.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show mcast_filter_profile {profile_id &lt;value 1-24&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the defined multicast address profiles.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>profile_id</code> – ID of the profile if not specified all profiles will be displayed.</td>
</tr>
<tr>
<td></td>
<td><code>profile_name &lt;name 1-32&gt;</code> – Name of the profile if not specified all profiles will be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None</td>
</tr>
</tbody>
</table>

Example usage:

To display a multicast filter profile:

```
DES-3528: 5#show mcast_filter_profile
Command: show mcast_filter_profile

<table>
<thead>
<tr>
<th>Profile ID</th>
<th>Name</th>
<th>Multicast Addresses</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>MOD</td>
<td>234.1.1.1 - 238.244.244.244</td>
</tr>
<tr>
<td>2</td>
<td>customer</td>
<td>224.19.62.34 - 224.19.162.200</td>
</tr>
</tbody>
</table>

Total Profile Count : 2

DES-3528:5#`
**config limited_multicast_addr**

**Purpose**
Used to configure the multicast address filtering function on a port.

**Syntax**
```
config limited_multicast_addr [ports <portlist> | vlanid <vidlist>] [add | delete] [profile_id <value 1-24> | profile_name <name 1-32> ] | access [permit | deny]] (1)
```

**Description**
This command is used to configure the multicast address filtering function on a port. When there are no profiles assigned to a port, the filtering function is not effective.

When the function is configured on a port, it limits the multicast group that hosts can join through the operation of IGMP.

**Parameters**
- `<portlist>` – A range of ports to config the multicast address filtering function.
- `<vidlist>` – A range of VLAN IDs to config the multicast address filtering function.
- `add` – Add a multicast address profile to a port.
- `delete` – Delete a multicast address profile to a port.
- `profile_id` – A profile to be added to or deleted from the port.
- `profile_name <name 1-32>` – The name of the profile.
- `permit` – Specifies that the multicast packet that matches the addresses defined in the profiles will be permitted. The default mode is permit.
- `deny` – Specifies that the multicast packet that matches the addresses defined in the profiles will be denied.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To config port 1,3 to set the multicast address profile 2:

```
DES-3528: 5#config limited_multicast_addr  ports 1,3  add profile_id 2
Command: config limited_multicast_addr  ports 1,3  add profile_id 2
Success.
DES-3528:5#
```

**show limited_multicast_addr**

**Purpose**
Used to show per-port Limited IP multicast address range.

**Syntax**
```
show limited_multicast_addr [ports <portlist> | vlvid <vidlist>]
```

**Description**
This command shows limited multicast address on a per port or per VID basis.

When the function is configured on a port or VLAN, it limits the multicast groups that hosts can join through the operation of IGMP snooping function and layer 3 function.

**Parameters**
- `<portlist>` – A range of ports to show the limited multicast address configuration.

**Restrictions**
None.

**Example usage:**
To show a limited multicast address range:
DES-3528: 5#show limited_multicast_addr ports 1,3
Command: show limited_multicast_addr ports 1,3

<table>
<thead>
<tr>
<th>Port</th>
<th>Access</th>
<th>Profile ID</th>
<th>Name</th>
<th>Multicast Addresses</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Deny</td>
<td>1</td>
<td>customer</td>
<td>224.19.62.34 - 224.19.162.200</td>
</tr>
</tbody>
</table>

DES-3528:5#

config max_mcast_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the maximum number of multicast groups that a port can join.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config max_mcast_group [ports &lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command configures the maximum number of multicast groups that a port can join.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – A range of ports to config the <code>max_mcast_group</code>&lt;br&gt;<code>&lt;vidlist&gt;</code> – A range of VLAN IDs to config the <code>max_mcast_group</code>.&lt;br&gt;<code>max_group</code> – Specifies the maximum number of the multicast groups. The range is from 1 to 1024 or <code>infinite</code>. Infinite is the default setting.&lt;br&gt;<code>action</code> – Specifies the action to handle the newly learned group when the register is full.&lt;br&gt;  - <code>drop</code> – The newly learned group will be dropped.&lt;br&gt;  - <code>replace</code> – The newly learned group will replace the eldest group in the register table.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To configure the maximum number of multicast groups:

DES-3528: 5#config max_mcast_group ports 1, 3 max_group 100
Command: config max_mcast_group ports 1, 3 max_group 100

Success.

DES-3528:5#
### show max_mcast_group

**Purpose**  
Used to display the max number of multicast groups that a port can join.

**Syntax**  
`show max_mcast_group [ports <portlist> | vlanid <vidlist>]`

**Description**  
This command display the max number of multicast groups that a port can join.

**Parameters**  
- `<portlist>` – A range of ports to display the max number of multicast groups.
- `<vidlist>` – A range of VLAN IDs to display the max number of multicast groups.

**Restrictions**  
None.

---

**Example usage:**

To display the maximum number of multicast groups:

```
DES-3528:5#show max_mcast_group ports 1,3
Command: show max_mcast_group ports 1,3

<table>
<thead>
<tr>
<th>Port</th>
<th>Max Multicast Group Number</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Infinite</td>
<td>Drop</td>
</tr>
<tr>
<td>3</td>
<td>Infinite</td>
<td>Drop</td>
</tr>
</tbody>
</table>

Total Entries: 2
```

DES-3528:5#

---
The IP interface commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config ipif</td>
<td>`&lt;ipif_name 12&gt; [{ ipaddress &lt;network_address&gt;</td>
</tr>
<tr>
<td>create ipif</td>
<td>`&lt;ipif_name 12&gt; {&lt;network_address&gt;</td>
</tr>
<tr>
<td>delete ipif</td>
<td>`{&lt;ipif_name 12&gt;</td>
</tr>
<tr>
<td>show ipif</td>
<td>`{&lt;ipif_name 12&gt;</td>
</tr>
<tr>
<td>enable ipif</td>
<td>`{&lt;ipif_name 12&gt;</td>
</tr>
<tr>
<td>disable ipif</td>
<td>`{&lt;ipif_name 12&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config ipif**

**Purpose**

Used to configure the IP interface.

**Syntax**

`config ipif `<ipif_name 12> `[% ipaddress `<network_address>` | vlan `<vlan_name 32>` | state [enable | disable] | proxy_arp [enable | disable] | local [enable | disable]](1) | bootp | dhcp`

**Description**

This command is used to configure the IP interface on the Switch.

**Parameters**

- `<ipif_name 12>` – Enter an alphanumeric string of up to 12 characters to identify this IP interface.
- `<ipaddress `<network_address>`>` – IP address and netmask of the IP interface to be created. Users can specify the address and mask information using the traditional format (for example, 10.1.2.3/255.0.0.0) or in CIDR format (10.1.2.3/8).
- `<vlan_name 32>` – The name of the VLAN corresponding to the System IP interface.
- `state [enable | disable]` – Allows users to enable or disable the IP interface.
- `proxy_arp [enable | disable]` – Allows users to enable or disable the proxy ARP function. The default setting is `Disabled`.
- `local [ enable | disable]` - Controls whether the system provides the proxy reply for the ARP packets destined for IP address located in the same subnet as the received interface. When proxy ARP is enabled for an interface, the system will reply the ARP query destined for IP address located in a different IP subnet from the interface IP. For ARP packets destined for IP address located in the same IP subnet as the interface IP, the system will check this setting to determine whether to reply. The default setting is `Disabled`.
- `bootp` – Allows the selection of the BOOTP protocol for the assignment of an IP address to the Switch’s System IP interface.
- `dhcp` – Allows the selection of the DHCP protocol for the assignment of an IP address to the Switch’s System IP interface. If users are using the autoconfig feature, the Switch becomes a DHCP client automatically so it is not necessary to change the ipif settings.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the IP interface System:
create ipif

**Purpose**
Used to create a L3 interface.

**Syntax**
```
create ipif <ipif_name 12> {<network_address>} <vlan_name 32> {state [enable | disable] | proxy_arp[enable | disable] {local [enable | disable]}}
```

**Description**
This command creates a L3 interface.
This interface can be configured with IPv4 address. Currently, it has a restriction. An interface can have only one IPv4 address defined.

**Parameters**
- `<ipif_name 12>` – The name created for the IP interface.
- `<network_address>` – The network address for the IP interface to be created.
- `<vlan_name 32>` – The name of vlan.
- `state` – the state of interface.
- `proxy_arp [enable | disable]` – Allows users to enable or disable the proxy ARP function. The default setting is `Disabled`.
- `local [enable | disable]` - Controls whether the system provides the proxy reply for the ARP packets destined for IP address located in the same subnet as the received interface. When proxy ARP is enabled for an interface, the system will reply the ARP query destined for IP address located in a different IP subnet from the interface IP. For ARP packets destined for IP address located in the same IP subnet as the interface IP, the system will check this setting to determine whether to reply. The default setting is `Disabled`.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To create an interface

```
DES-3528:5# create ipif if2 vlan2 state enable
Command: create ipif if2 vlan2 state enable
Success.
```

**NOTE:** The DES-3528/52 Series does not support cross-VLAN routing. Clients on different VLANs/subnets within the same DES-3528/52 switch need to communicate with each other via an external L3 router or switch.
delete ipif

Purpose
Used to delete an interface.

Syntax
delete ipif [<ipif_name 12> | all]

Description
This command deletes an interface or all interfaces.
Note that the system interface cannot be deleted.

Parameters
<ipif_name 12> – The name of the deleted IP interface.
all – All IPIF except the System IPIF will be deleted.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To delete an IP interface.

DES-3528:5#delete ipif if2
Command: delete ipif if2
Success.
DES-3528:5#

enable ipif

Purpose
Used to enable the admin state for an interface.

Syntax
enable ipif [ <ipif_name 12> | all ]

Description
This command enables the state for an IPIF.
When the state is enabled, the IPv4 processing will be started. When the IPv4 address is configured on the IPIF.

Parameters
<ipif_name 12> – The name of the IP interface.
all – All the interface.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To enable the admin state of one interface.

DES-3528:5#enable ipif System
Command: enable ipif System
Success.
DES-3528:5#

disable ipif

Purpose
Used to disable the admin state for an interface.

Syntax
disable ipif [ <ipif_name 12> | all ]

Description
This command disables the state for an ipif.

Parameters
<ipif_name 12> – The name of the IP interface.
all – Specifies all interfaces.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To disable the admin state for an interface.

```
DES-3528:5#disable ipif System
Command: disable ipif System
Success.
DES-3528:5#
```

### show ipif

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the configuration of an IP interface on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show ipif {&lt;ipif_name 12&gt;}</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the configuration of an IP interface on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;ipif_name 12&gt; – The name of the IP interface.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display IP interface settings.

```
DES-3528:5#show ipif System
Command: show ipif System

IP Interface : System
VLAN Name : default
Interface Admin State : Enabled
IPv4 Address : 10.24.73.21/8 (Manual) Primary
Proxy ARP : Disabled (Local : Disabled)

DES-3528:5#
```
## Multicast VLAN Commands

The Multicast VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>create igmp_snooping multicast_vlan</code></td>
<td>`&lt;vlan_name 32&gt; &lt;vlanid 2-4094&gt; {remap_priority [&lt;value 0-7&gt;</td>
</tr>
<tr>
<td><code>config igmp_snooping multicast_vlan</code></td>
<td>`&lt;vlan_name 32&gt; [{add</td>
</tr>
<tr>
<td><code>show igmp_snooping multicast_vlan_group</code></td>
<td><code>{ &lt;vlan_name 32&gt; }</code></td>
</tr>
<tr>
<td><code>delete igmp_snooping multicast_vlan</code></td>
<td><code>&lt;vlan_name 32&gt;</code></td>
</tr>
<tr>
<td><code>enable igmp_snooping multicast_vlan</code></td>
<td></td>
</tr>
<tr>
<td><code>disable igmp_snooping multicast_vlan</code></td>
<td></td>
</tr>
<tr>
<td><code>config igmp_snooping multicast_vlan</code></td>
<td><code>{&lt;vlan_name 32&gt;}</code></td>
</tr>
<tr>
<td><code>forward_unmatched</code></td>
<td>`[disable</td>
</tr>
<tr>
<td><code>create igmp_snooping multicast_vlan_group_profile</code></td>
<td><code>&lt;profile_name 1-32&gt;</code></td>
</tr>
<tr>
<td><code>config igmp_snooping multicast_vlan_group_profile</code></td>
<td>`&lt;profile_name 1-32&gt; [add</td>
</tr>
<tr>
<td><code>delete igmp_snooping multicast_vlan_group_profile</code></td>
<td>` [&lt;profile_name 1-32&gt;</td>
</tr>
<tr>
<td><code>show igmp_snooping multicast_vlan_group_profile</code></td>
<td><code>{&lt;profile_name 1-32&gt;}</code></td>
</tr>
<tr>
<td><code>config igmp_snooping multicast_vlan_group</code></td>
<td>`&lt;vlan_name 32&gt; [add</td>
</tr>
<tr>
<td><code>show igmp_snooping multicast_vlan_group</code></td>
<td><code>{ &lt;vlan_name 32&gt; }</code></td>
</tr>
<tr>
<td><code>create mld_snooping multicast_vlan</code></td>
<td><code>&lt;vlan_name 32&gt; &lt;vlanid 2-4094&gt;</code></td>
</tr>
<tr>
<td><code>config mld_snooping multicast_vlan</code></td>
<td>`&lt;vlan_name 32&gt; [{add</td>
</tr>
<tr>
<td><code>create mld_snooping multicast_vlan_group_profile</code></td>
<td><code>&lt;profile_name 1-32&gt;</code></td>
</tr>
<tr>
<td><code>config mld_snooping multicast_vlan_group_profile</code></td>
<td>`&lt;profile_name 1-32&gt; [add</td>
</tr>
<tr>
<td><code>delete mld_snooping multicast_vlan_group_profile</code></td>
<td>` [&lt;profile_name 1-32&gt;</td>
</tr>
<tr>
<td><code>show mld_snooping multicast_vlan_group_profile</code></td>
<td><code>{&lt;profile_name 1-32&gt;}</code></td>
</tr>
<tr>
<td><code>config mld_snooping multicast_vlan_group_profile</code></td>
<td>`&lt;profile_name 1-32&gt; [add</td>
</tr>
</tbody>
</table>
The table below lists the commands and their parameters for creating and managing multicast VLANs:

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>multicast_vlan_group</td>
<td></td>
</tr>
<tr>
<td>show mld_snooping</td>
<td>{&lt; vlan_name 32&gt; }</td>
</tr>
<tr>
<td>multicast_vlan_group</td>
<td></td>
</tr>
<tr>
<td>delete mld_snooping</td>
<td>&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>multicast_vlan</td>
<td></td>
</tr>
<tr>
<td>enable mld_snooping</td>
<td>&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>disable mld_snooping</td>
<td></td>
</tr>
<tr>
<td>multicast_vlan</td>
<td></td>
</tr>
<tr>
<td>show mld_snooping</td>
<td>{&lt;vlan_name 32&gt;}</td>
</tr>
<tr>
<td>multicast_vlan</td>
<td></td>
</tr>
<tr>
<td>config mld_snooping</td>
<td>[disable</td>
</tr>
<tr>
<td>forward_unmatched</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### create igmp_snooping multicast_vlan

**Purpose**: Used to create a multicast VLAN

**Syntax**: `create igmp_snooping multicast_vlan <vlan_name 32> <vlanid 2-4094> {remap_priority [<value 0-7] | none} { replace_priority}`

**Description**: This command will create a multicast_vlan. Multiple multicast VLANs can be configured. When creating an ISM VLAN, it cannot duplicate with the VLAN entries in the existing 802.1Q VLAN database. The ISM VLAN snooping function can co-exist with the 1Q VLAN snooping function.

**Parameters**

- `<vlan_name>` – The name of the VLAN to be created. Each multicast VLAN is given a name that can be up to 32 characters.
- `<vlanid>` – The VLAN ID of the multicast VLAN to be create. The range is 2-4094.
- `remap_priority` – The remap priority value (0 to 7) is associated with the data traffic to be forwarded on the multicast VLAN. If None is specified, the packet's original priority will be used. The default setting is none.
- `replace_priority` - Specifies that packet’s priority will be changed by the Switch based on the remap priority. This flag will only take effect when remap priority is set.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

**Example usage:**

To create IGMP snoop multicast VLAN mv12:

```
DES-3528:5# create igmp_snoop multicast_vlan mv1 2
Command: create igmp_snoop multicast_vlan mv1 2
Success.

DES-3528:5#
```
config igmp_snooping multicast_vlan

### Purpose
Used to configure the parameter of the specific multicast VLAN.

### Syntax
```
config igmp_snooping multicast_vlan <vlan_name 32> { [add | delete] [member_port <portlist> | [source_port <portlist> | untag_source_port <portlist>] | tag_member_port <portlist> | state [enable | disable] | replace_source_ip <ipaddr> | remap_priority [<value 0-7> | none] [ replace_priority] }
```

### Description
This command allows you to add a untagged member port, a tagged member port, a untagged source port and a tagged source port to the port list. The untagged member port and the untagged source port will automatically become the untagged members of the multicast VLAN, the tagged member port and the tagged source port will automatically become the tagged members of the multicast VLAN. To change the port list, the Switch will add or delete the port list that user entered, and update the previous port list.

The member port list and source port list cannot overlap. However, the member port of one multicast VLAN can overlap with another multicast VLAN.

Before configuring the multicast VLAN member port by using this command, the multicast VLAN must be created first.

### Parameters
- `<vlan_name32>` - The name of the VLAN to be created. Each multicast VLAN is given a name that can be up to 32 characters.
- `member_port` - Adds a range of member ports to the multicast VLAN. They will become the untagged member port of the IGMP multicast VLAN.
- `source_port` - Adds a range of source ports to the multicast VLAN.
- `untag_source_port` - Adds a range of untagged source ports to the multicast VLAN.
- `tag_member_port` - Specifies the tagged member port of the IGMP multicast VLAN.
- `state` - enable or disable multicast VLAN for the chosen VLAN.
- `replace_source_ip` - With the IGMP snooping function, the IGMP report packet sent by the host will be forwarded to the source port. Before the forwarding of the packet, the source IP address in the join packet needs to be replaced by this IPv4 address.
- `remap_priority` - Associates the remap priority value (0 to 7) with the data traffic and is forwarded on the multicast VLAN. If `none` is specified, the packet’s original priority will be used. The default setting is `none`.

### Restrictions
Only Administrator and Operator-level users can issue this command.

### Example usage:
To configure an IGMP snoop multicast VLAN:

```
DES-3528:5#config igmp_snooping multicast_vlan v1 add member_port 1,3 state enable
Command: config igmp_snooping multicast_vlan v1 add member_port 1,3 state enable
Success.
DES-3528:5#
```

---

show igmp_snooping multicast_vlan_group

### Purpose
Used to display the multicast groups configured for the specified multicast VLAN.

### Syntax
```
show igmp_snooping multicast_vlan_group { <vlan_name 32> }
```

### Description
This command is used to display the multicast groups configured for the specified multicast VLAN.

### Parameters
- `vlan_name` - The name of the multicast VLAN to be configured, each multicast VLAN is given a name that can be up to 32 characters.

### Restrictions
None.

### Example usage:
To display the multicast groups configured for a multicast VLAN.

```
DES-3528:5#show igmp_snooping multicast_vlan_group v1
Command: show igmp_snooping multicast_vlan_group v1

VLAN Name            VLAN ID        Multicast Group Profiles
-------------------  -------  ---------------------------------
  v1                 3

DES-3528:5#
```

### delete igmp_snooping multicast_vlan

**Purpose**

Used to delete a multicast VLAN.

**Syntax**

```
delete igmp_snooping multicast_vlan <vlan_name 32>
```

**Description**

This command allows you to delete multicast VLAN.

**Parameters**

- `vlan_name` – The name of the multicast VLAN to be deleted.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage:**

To delete an IGMP snoop multicast VLAN:

```
DES-3528:5#delete igmp_snooping multicast_vlan v1
Command: delete igmp_snooping multicast_vlan v1
Success.
DES-3528:5#
```

### enable igmp_snooping multicast_vlan

**Purpose**

Used to enable the multicast VLAN function.

**Syntax**

```
enable igmp_snooping multicast_vlan
```

**Description**

This command controls the multicast VLAN function. The ISM VLAN will take effect when IGMP snooping multicast VLAN is enabled.

**Parameters**

None.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage:**

To enable IGMP snoop multicast VLAN:

```
DES-3528:5#enable igmp_snooping multicast_vlan
Command: enable igmp_snooping multicast_vlan
Success.
DES-3528:5#
```
### disable igmp_snooping multicast_vlan

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the multicast VLAN function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable igmp_snooping multicast_vlan</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable the IGMP snooping multicast VLAN function.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable IGMP snoop multicast VLAN:

```
DES-3528:5#disable igmp_snooping multicast_vlan
Command: disable igmp_snooping multicast_vlan
Success.
DES-3528:5#
```

### show igmp_snooping multicast_vlan

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the information of multicast VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show igmp_snooping multicast_vlan {&lt;vlan_name 32&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to show the information of multicast VLAN.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name&gt;</code> – The name of the multicast VLAN to be shown.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display IGMP snoop multicast VLAN:
DES-3528:5# show igmp_snooping multicast_vlan

Command: show igmp_snooping multicast_vlan

ISM VLAN Global State : Disabled

VLAN Name : mu1
VID : 2

Member (Untagged) Ports :
Tagged Member Ports :
Source Ports :
Untagged Source Ports :
Status : Disabled
Replace Source IP : 0.0.0.0
Remap Priority : None

VLAN Name : v1
VID : 3

Member (Untagged) Ports :
Tagged Member Ports :
Source Ports :
Untagged Source Ports :
Status : Disabled

config igmp_snooping multicast_vlan forward_unmatched

Purpose
Used to configure forwarding or dropping of the multicast VLAN unmatched packet.

Syntax
config igmp_snooping multicast_vlan forward_unmatched [disable | enable]

Description
When the Switch receives a tagged IGMP group packet, if the VID in the tagged packet belongs to a multicast VLAN and the group does not match all profiles, then the configuration takes effect and the packet will be forwarded or dropped based on the setting. By default, the packet will be dropped.

Parameters
enable – The packet will be forwarded.
disable – The packet will be dropped.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure IGMP snooping multicast VLAN forward:

DES-3528:5# config igmp_snooping multicast_vlan forward_unmatched enable
Command: config igmp_snooping multicast_vlan forward_unmatched enable

Success.

DES-3528:5#
### create igmp_snooping multicast_vlan_group_profile

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create an IGMP multicast VLAN group profile on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>create igmp_snooping multicast_vlan_group_profile &lt;profile_name 1-32&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to create an IGMP multicast VLAN group profile on the switch. The profile name used for IGMP snooping must be unique.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;profile_name 32&gt;</code> – Specifies the IGMP multicast VLAN group profile name, max length is 32.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To create an IGMP multicast VLAN group profile "g1":

```
DES-3528:5# create igmp_snooping multicast_vlan_group_profile g1
Command: create igmp_snooping multicast_vlan_group_profile g1
Success.
DES-3528:5#
```
### config igmp_snooping multicast_vlan_group_profile

**Purpose**
Used to configure an IGMP snooping multicast group profile on the Switch, and to add or delete multicast address for the profile.

**Syntax**
```
config igmp_snooping multicast_vlan_group_profile <profile_name 1-32> [add | delete] <mcast_address_list>
```

**Description**
This command configures an IGMP multicast VLAN group profile on the Switch, and can add or delete multicast addresses for the profile.

**Parameters**
- `<profile_name 32>` – Specifies the IGMP multicast VLAN group profile name, max length is 32.
- `[add | delete]` – Add or delete IGMP multicast address list to or from this multicast VLAN group profile
- `<mcast_address_list>` – Specifies the IGMP multicast addresses to be configured. It can be a continuous single multicast addresses, such as 225.1.1.1, 225.1.1.3, 225.1.1.8, or a multicast address range, such as 225.1.1.1 - 225.1.1.20, or both of them, such as 225.1.1.1, 225.1.1.18 - 225.1.1.20.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To add IGMP multicast address or range to a profile:
```
DES-3528:5#config igmp_snooping multicast_vlan_group_profile g1 add 235.2.2.1-235.2.2.2
Command: config igmp_snooping multicast_vlan_group_profile g1 add 235.2.2.1-235.2.2.2
Success.
DES-3528:5#
```

### delete igmp_snooping multicast_vlan_group_profile

**Purpose**
Used to delete an IGMP multicast VLAN group profile on the switch.

**Syntax**
```
delete igmp_snooping multicast_vlan_group_profile [<profile_name 1-32> | all]
```

**Description**
This command deletes an IGMP multicast VLAN group profile on the switch.

**Parameters**
- `<profile_name 32>` – Specifies the IGMP multicast VLAN profile name, max length is 32.
- `all` – All IGMP multicast VLAN group profile will be deleted.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete the IGMP multicast VLAN group profile "g1":
```
DES-3528:5#delete igmp_snooping multicast_vlan_group_profile g1
Command: delete igmp_snooping multicast_vlan_group_profile g1
Success.
DES-3528:5#
```
### show igmp_snooping multicast_vlan_group_profile

**Purpose**
Used to show the information about an IGMP multicast VLAN group profile on the Switch.

**Syntax**
```plaintext
show igmp_snooping multicast_vlan_group_profile {<profile_name 1-32>}
```

**Description**
This command is used to show the information about an IGMP multicast VLAN group profile on the Switch.

**Parameters**
- `{<profile_name 32>}` – Specifies the IGMP multicast VLAN profile name, max length is 32. If not specified, all IGMP multicast VLAN group profiles will be displayed.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To display the IGMP multicast VLAN group profile:

```plaintext
DES-3528:5#show igmp_snooping multicast_vlan_group_profile
Command: show igmp_snooping multicast_vlan_group_profile

<table>
<thead>
<tr>
<th>Profile Name</th>
<th>Multicast Addresses</th>
</tr>
</thead>
<tbody>
<tr>
<td>g1</td>
<td>235.2.2.1-235.2.2.2</td>
</tr>
</tbody>
</table>

Total Entries: 1

DES-3528:5#
```

### config igmp_snooping multicast_vlan multicast_group

**Purpose**
Used to bind a multicast group profile to a multicast VLAN. The binding profile will affect the group joined to the multicast VLAN.

**Syntax**
```plaintext
config igmp_snooping multicast_vlan multicast_group <vlan_name 32> [add | delete] profile_name <profile_name 1-32>
```

**Description**
After binding a profile to a multicast VLAN, when a multicast group attempt to join this multicast VLAN member port, the group cannot join this multicast VLAN if the group does not belong to the range of binding profile.

**NOTE:** Multiple profiles can be added to a multicast VLAN.

**Parameters**
- `<vlan_name 32>` – The name of the multicast VLAN to be configured, each multicast VLAN is given a name that can be up to 32 characters.
  - `add` – Used to associate a profile to a multicast VLAN.
  - `delete` – Used to de-associate a profile from a multicast VLAN.
- `<profile_name 32>` – The name of the IGMP multicast VLAN group profile to be associated or de- associated to the specified multicast VLAN.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To associate an IGMP multicast VLAN group profile “g1” to IGMP multicast VLAN “mv1”:
show igmp_snooping multicast_vlan_group

**Purpose**
Used to display the multicast group profiles configured for the specified IGMP multicast VLAN.

**Syntax**
show igmp_snooping multicast_vlan_group {< vlan_name 32> }

**Description**
This command is used to display the multicast group profiles configured for the specified IGMP multicast VLAN.

**Parameters**

- **vlan_name** – The name of the multicast VLAN to be configured, each multicast VLAN is given a name that can be up to 32 characters. If not specified, all IPv4 multicast VLAN groups will be displayed.

**Restrictions**
None.

**Example usage:**

To display the multicast group profiles configured for an IGMP multicast VLAN:

```
DE-3528:5#show igmp_snooping multicast_vlan_group
Command: show igmp_snooping multicast_vlan_group

<table>
<thead>
<tr>
<th>VLAN Name</th>
<th>VLAN ID</th>
<th>Multicast Group Profiles</th>
</tr>
</thead>
<tbody>
<tr>
<td>mv1</td>
<td>2</td>
<td>g1</td>
</tr>
</tbody>
</table>

DE-3528:5#
```

create mld_snooping multicast_vlan

**Purpose**
Used to create an MLD multicast VLAN

**Syntax**
create mld_snooping multicast_vlan <vlan_name 32> <vlanid 2-4094>

**Description**
This command will create a MLD multicast_vlan. Multiple multicast VLANs can be configured.

When creating MLD multicast VLAN, it cannot duplicate with the VLAN entries in the existing 802.1Q VLAN database. The MLD Multicast VLAN snooping function co-exists with the 1Q VLAN snooping function.

**Parameters**

- **<vlan_name>** – The name of the VLAN to be created. Each multicast VLAN is given a name that can be up to 32 characters.
- **vlanid** – The VLAN ID of the multicast VLAN to be create. The range is 2-4094.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To create MLD multicast VLAN mv1:

```
DE-3528:5#config igmp_snooping multicast_vlan_group mv1 add profile_name g1
Command: config igmp_snooping multicast_vlan_group mv1 add profile_name g1
Success.
DE-3528:5#
```
DES-3528:5# create mld_snooping multicast_vlan mv1 2
Command: create mld_snooping multicast_vlan mv1 2
Success.
DES-3528:5#

**config mld_snooping multicast_vlan**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the parameter of the specific MLD multicast VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mld_snooping multicast_vlan &lt;vlan_name 32&gt; {[add</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to add a untagged member port, a tagged member port, a untagged source port and a tagged source port to the port list. The untagged member port and the untagged source port will automatically become the untagged members of the multicast VLAN, the tagged member port and the tagged source port will automatically become the tagged members of the multicast VLAN. To change the port list, the Switch will add or delete the port list that user entered, and update the previous port list. The member port list and source port list cannot overlap. However, the member port of one multicast VLAN can overlap with another multicast VLAN. Before configuring the multicast VLAN member port by using this command, the multicast VLAN must be created first.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name32&gt;</code> – The name of the VLAN to be created. Each multicast VLAN is given a name that can be up to 32 characters. <code>&lt;member_port</code>– Adds a range of member ports to the multicast VLAN. They will become the untagged member port of the MLD multicast VLAN. <code>&lt;source_port</code>– Adds a range of source ports to the multicast VLAN. <code>&lt;untag_source_port</code>– Adds a range of untagged source ports to the multicast VLAN. The PVID of the untag source port will be automatically changed to the multicast VLAN. It shall be only one kind of source port, tag or untag for an ISM VLAN. <code>&lt;tag_member_port</code>– Specifies the tagged member port of the MLD multicast VLAN. <code>&lt;state</code>– enable or disable multicast VLAN for the chosen VLAN. <code>&lt;replace_source_ip</code>– With the MLD snooping function, the MLD report packet sent by the host will be forwarded to the source port. Before the forwarding of the packet, the source IP address in the join packet needs to be replaced by this IPv6 address. <code>&lt;remap_priority</code>– Associates the remap priority value (0 to 7) with the data traffic and is forwarded on the multicast VLAN. If <code>none</code> is specified, the packet’s original priority will be used. The default setting is <code>none</code>.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To config MLD multicast VLAN mv1:

DES-3528:5# config mld_snooping multicast_vlan mv1 add member_port 1,3 state enable
Command: config mld_snooping multicast_vlan mv1 add member_port 1,3 state enable
Success.
DES-3528:5#
**create mld_snooping multicast_vlan_group_profile**

**Purpose**
Used to create an MLD multicast VLAN group profile on the switch.

**Syntax**
create mld_snooping multicast_vlan_group_profile <profile_name 1-32>

**Description**
This command is used to create an MLD multicast VLAN group profile on the switch. The maximum supported number of multicast VLAN group profiles is project dependent. The profile name used for mld snooping must be unique.

**Parameters**
- **<profile_name 32>** – Specifies the MLD multicast VLAN group profile name, max length is 32

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

Example usage:
To create an MLD multicast VLAN group profile "g1":

```
DES-3528:5# create mld_snooping multicast_vlan_group_profile g1
Command: create mld_snooping multicast_vlan_group_profile g1
Success.
DES-3528:5#
```

**config mld_snooping multicast_vlan_group_profile**

**Purpose**
Used to configure an MLD multicast VLAN group profile on the switch, to add or delete multicast address for the profile.

**Syntax**
config mld_snooping multicast_vlan_group_profile <profile_name 1-32> [add | delete] <mcastv6_address_list>

**Description**
This command configures an MLD multicast VLAN group profile on the switch, and can add or delete multicast addresses for the profile.

**Parameters**
- **<profile_name 32>** – Specifies the MLD multicast VLAN group profile name, max length is 32.
- **[add | delete]** – Add or delete MLD multicast address list to or from this multicast VLAN group profile
- **<mcastv6_address_list>** – Specifies the MLD multicast addresses to be configured. It can be a continuous single multicast addresses, such as FF12::1, FF12::3, FF12::8, or a multicast address range, such as FF12::1-FF12::12, or both of them, such as FF12::1, FF12::18-FF12::20.

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

Example usage:
To add 225.1.1.1 to 226.1.1.1 to MLD multicast VLAN group profile "g1":

```
DES-3528:5# config mld_snooping multicast_vlan_group_profile g1 add FF12::1-FF12::2
Command: config mld_snooping multicast_vlan_group_profile g1 add FF12::1-FF12::2
Success.
DES-3528:5#
```
### delete mld_snooping multicast_vlan_group_profile

**Purpose**
Used to delete an MLD multicast VLAN group profile on the switch.

**Syntax**
```
delete mld_snooping multicast_vlan_group_profile [<profile_name 1-32> | all]
```

**Description**
This command deletes an MLD multicast VLAN group profile on the switch.

**Parameters**
- `<profile_name 32>` – Specifies the MLD multicast VLAN profile name, max length is 32.
- `all` – All MLD multicast VLAN group profile will be deleted.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To delete the MLD multicast VLAN group profile "g1":

```
DES-3528:5#delete mld_snooping multicast_vlan_group_profile g1
Command: delete mld_snooping multicast_vlan_group_profile g1
Success.
DES-3528:5#
```

### show mld_snooping multicast_vlan_group_profile

**Purpose**
Used to show the information about an MLD multicast VLAN group profile on the switch.

**Syntax**
```
show mld_snooping multicast_vlan_group_profile {<profile_name 1-32>}
```

**Description**
This command is used to show the information about an MLD multicast VLAN group profile on the switch.

**Parameters**
- `<profile_name 32>` – Specifies the MLD multicast VLAN profile name, max length is 32. If not specified, all MLD multicast VLAN group profiles will be displayed.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To display the MLD multicast VLAN group profile:

```
DES-3528:5#show mld_snooping multicast_vlan_group_profile
Command: show mld_snooping multicast_vlan_group_profile

<table>
<thead>
<tr>
<th>Profile Name</th>
<th>Multicast Addresses</th>
</tr>
</thead>
<tbody>
<tr>
<td>g1</td>
<td>FF12::1-FF12::2</td>
</tr>
</tbody>
</table>

Total Entry: 1

DES-3528:5#
```
**config mld_snooping multicast_vlan multicast_group**

**Purpose**
Used to bind a multicast group profile to a multicast VLAN. The binding profile will affect the group joined to the multicast VLAN.

**Syntax**
```
config mld_snooping multicast_vlan_group <vlan_name 32> [add | delete]
profile_name <profile_name 1-32>
```

**Description**
After binding a profile to a multicast VLAN, when a multicast group attempt to join this multicast VLAN member port, the group cannot join this multicast VLAN if the group does not belong to the range of binding profile.

**NOTE:** Multiple profiles can be added to a multicast VLAN.

**Parameters**
- `<vlan_name 32>` – The name of the multicast VLAN to be configured, each multicast VLAN is given a name that can be up to 32 characters.
- `add` – Used to associate a profile to a multicast VLAN.
- `delete` – Used to de-associate a profile from a multicast VLAN.
- `<profile_name 32>` – The name of the MLD multicast VLAN group profile to be associated or de-associated to the specified multicast VLAN.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To associate an MLD multicast VLAN group profile “g1” to MLD multicast VLAN “mv1”:

```
DES-3528:5#config mld_snooping multicast_vlan_group mv1 add profile_name g1
Command: config mld_snooping multicast_vlan_group mv1 add profile_name g1
Success.
DES-3528:5#
```

**show mld_snooping multicast_vlan_group**

**Purpose**
Used to display the multicast group profiles configured for the specified MLD multicast VLAN.

**Syntax**
```
show mld_snooping multicast_vlan_group {< vlan_name 32> }
```

**Description**
This command is used to display the multicast group profiles configured for the specified MLD multicast VLAN.

**Parameters**
- `<vlan_name>` – The name of the multicast VLAN to be configured, each multicast VLAN is given a name that can be up to 32 characters. If not specified, all IPv6 multicast VLAN groups will be displayed.

**Restrictions**
None.

**Example usage:**
To display the multicast group profiles configured for an MLD multicast VLAN.
```plaintext
DES-3528:5#show mld_snooping multicast_vlan_group
Command: show mld_snooping multicast_vlan_group

<table>
<thead>
<tr>
<th>VLAN Name</th>
<th>VLAN ID</th>
<th>Multicast Group Profiles</th>
</tr>
</thead>
<tbody>
<tr>
<td>mv1</td>
<td>2</td>
<td>g1</td>
</tr>
</tbody>
</table>

DES-3528:5#
```

### delete mld_snooping multicast_vlan

**Purpose**
Used to delete an MLD multicast VLAN.

**Syntax**
```
delete mld_snooping multicast_vlan <vlan_name 32>
```

**Description**
This command allows you to delete an MLD multicast VLAN.

**Parameters**
- `vlan_name` – The name of the multicast VLAN to be deleted.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete an MLD multicast VLAN:

```
DES-3528:5#delete mld_snooping multicast_vlan mv1
Command: delete mld_snooping multicast_vlan mv1
Success.
DES-3528:5#
```

### enable mld_snooping multicast_vlan

**Purpose**
Used to enable the MLD Multicast VLAN function.

**Syntax**
```
enable mld_snooping multicast_vlan
```

**Description**
This command is used for the MLD Multicast VLAN to take effect. The MSM VLAN will take effect when MLD snooping multicast VLAN is enabled.

**Parameters**
- None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To enable MLD Multicast VLAN:

```
DES-3528:5#enable mld_snooping multicast_vlan
Command: enable mld_snooping multicast_vlan
Success.
DES-3528:5#
```
### disable mld_snooping multicast_vlan

**Purpose**
Used to disable the MLD Multicast VLAN function.

**Syntax**
disable mld_snooping multicast_vlan

**Description**
This command is used to disable the MLD Multicast VLAN function.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable MLD Multicast VLAN:

```
DES-3528:5#enable mld_snooping multicast_vlan
Command: enable mld_snooping multicast_vlan
Success.
DES-3528:5#
```

### show mld_snooping multicast_vlan

**Purpose**
Used to show the information of MLD multicast VLAN.

**Syntax**
show mld_snooping multicast_vlan {<vlan_name 32>}

**Description**
This command allows you to show the information of an MLD multicast VLAN.

**Parameters**

- `<vlan_name>` – The name of the multicast VLAN to be shown. If not specified, all MLD multicast VLANs will be displayed.

**Restrictions**
None.

Example usage:

To show MLD multicast VLAN:

```
DES-3528:5#show mld_snooping multicast_vlan
```

DES-3528:5#show mld_snooping multicast_vlan mv1
Command: show mld_snooping multicast_vlan mv1

MLDM VLAN Global State : Enabled
VLAN Name : mv1
VID : 2

Status : Enabled
Replace Source IP : ::
Remap Priority : None

Total Entries: 1

DES-3528:5#

**config mld_snooping multicast_vlan forward_unmatched**

**Purpose**
Used to configure forwarding mode for MLD Multicast VLAN unmatched packet.

**Syntax**
config mld_snooping multicast_vlan forward_unmatched [disable | enable]

**Description**
When the switch receives an MLD packet, it will match the packet against the multicast profile to determine the MLD multicast VLAN to be associated with. If the packet does not match any profiles, the packet will be forwarded or dropped based on the setting. By default, the packet will be dropped.

**Parameters**
- **enable** – The unmatched packet will be flooded on the VLAN.
- **disable** – The unmatched packet will be dropped.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To set unmatched packet to be flooded on the VLAN:

DES-3528:5#config mld_snooping multicast_vlan forward_unmatched enable
Command: config mld_snooping multicast_vlan forward_unmatched enable

Success.

DES-3528:5#
IGMP SNOOPING COMMANDS

The IGMP Snooping commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config igmp_snooping</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config igmp_snooping querier</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config router_ports</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config router_ports_forbidden</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>enable igmp_snooping</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>disable igmp_snooping</td>
<td>={[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show igmp_snooping group</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show igmp_snooping rate_limit</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config igmp_snooping rate_limit</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>create igmp_snooping forwarding</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>static_group</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show igmp_snooping static_group</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>delete igmp_snooping static_group</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config igmp_snooping static_group</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show igmp_snooping statistic counter</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>clear igmp_snooping statistic counter</td>
<td>{[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config igmp_snooping data_driven_learning max_learned_entry</td>
<td>&lt;value 1-1024&gt;</td>

<tr>
<td>config igmp_snooping data_driven_learning</td>
<td>[all</td>
</tr>
<tr>
<td>clear igmp_snooping data_driven_group</td>
<td>[all</td>
</tr>
</tbody>
</table>

192
Each command is listed, in detail, in the following sections.

<table>
<thead>
<tr>
<th><strong>config igmp_snooping</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong> Used to configure IGMP snooping on the Switch.</td>
</tr>
<tr>
<td><strong>Syntax</strong> `config igmp_snooping [ vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td><strong>Description</strong> This command allows the user to configure IGMP snooping on the Switch.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
</tr>
<tr>
<td><code>&lt;vlan_name 32&gt;</code> – The name of the VLAN for which IGMP snooping is to be configured.</td>
</tr>
<tr>
<td><code>&lt;vidlist&gt;</code> – The VIDs of the VLAN for which IGMP snooping is to be configured.</td>
</tr>
<tr>
<td>`state [enable</td>
</tr>
<tr>
<td>`fast_leave [enable</td>
</tr>
<tr>
<td>`report_suppression [enable</td>
</tr>
<tr>
<td><strong>Restrictions</strong> Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure IGMP snooping:

```bash
DES-3528:5# config igmp_snooping vlan default state enable fast_leave enable report_suppression disable
Command: config igmp_snooping vlan default state enable fast_leave enable report_suppression disable
Success.
DES-3528:5#
```
| **Purpose** | Used to configure the the time in seconds between general query transmissions, the maximum time in seconds to wait for reports from members and the permitted packet loss that guarantees IGMP snooping. |
| **Syntax** | `config igmp_snooping querier [vlan <vlan_name 32> | vlanid <vidlist> | all ] {query_interval <sec 1-65535> | max_response_time <sec 1-25> | robustness_variable <value 1-255> | last_member_query_interval <sec 1-25> | state [enable | disable] | version <value 1-3>}(1)` |
| **Description** | This command configures IGMP snooping querier. |
| **Parameters** | `<vlan_name 32>` – The name of the VLAN for which IGMP snooping querier is to be configured.  
`<vidlist>` – The VIDs of the VLAN for which IGMP snooping is to be configured.  
`query_interval` – Specifies the amount of time in seconds between general query transmissions. the default setting is 125 seconds.  
`max_response_time` – The maximum time in seconds to wait for reports from members. The default setting is 10 seconds.  
`robustness_variable` – Provides fine-tuning to allow for expected packet loss on a subnet. The value of the robustness variable is used in calculating the following IGMP message intervals:  
  - Group member interval – Amount of time that must pass before a multicast router decides there are no more members of a group on a network. This interval is calculated as follows: $(\text{robustness variable} \times \text{query interval}) + (1 \times \text{query response interval})$.  
  - Other querier present interval – Amount of time that must pass before a multicast router decides that there is no longer another multicast router that is the querier. This interval is calculated as follows: $(\text{robustness variable} \times \text{query interval}) + (0.5 \times \text{query response interval})$.  
  - Last member query count – Number of group-specific queries sent before the router assumes there are no local members of a group. The default number is the value of the robustness variable.  
  - By default, the robustness variable is set to 2. You might want to increase this value if you expect a subnet to be lossy.  
`last_member_query_interval` – The maximum amount of time between group-specific query messages, including those sent in response to leave-group messages. You might lower this interval to reduce the amount of time it takes a router to detect the loss of the last member of a group.  
`state` – If the state is enable, it allows the switch to be selected as a IGMP Querier (sends IGMP query packets). If the state is disabled, then the switch cannot play the role as a querier. Note that if the Layer 3 router connected to the switch provide only the IGMP proxy function but not provide the multicast routing function, then this state must be configured as disabled. Otherwise, if the Layer 3 router is not selected as the querier, it will not send the IGMP query packet. Since it will not also send the multicast-routing protocol packet, the port will be timed out as a router port.  
`version` – The version of the IGMP Query sent by the switch. |
| **Restrictions** | Only Administrator or Operator-level users can issue this command. |

Example usage:

To configure the IGMP snooping querier:

```
DES-3528:5# config igmp_snooping querier vlan default query_interval 125 state enable
Command: config igmp_snooping querier vlan default query_interval 125 state enable
Success.
DES-3528:5#
```
### config router_ports

**Purpose**
Used to configure ports as router ports.

**Syntax**
```
config router_ports [vlan <vlan_name 32> | vlanid <vidlist>] [add | delete] <portlist>
```

**Description**
This command allows users to designate a range of ports as being connected to multicast-enabled routers. This will ensure that all packets with such a router as its destination will reach the multicast-enabled router – regardless of protocol, etc.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the router port resides.
- `<vidlist>` – The VIDs of the VLAN for which IGMP snooping is to be configured.
- `[add | delete]` – Specifies whether to add or delete forbidden ports of the specified VLAN.
- `<portlist>` – Specifies a port or range of ports that will be configured as router ports.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To set up static router ports:

```
DES-3528:5# config router_ports default add 2:1-2:10
Command: config router_ports default add 2:1-2:10
Success.
DES-3528:5#
```

### config router_ports_forbidden

**Purpose**
Used to configure ports as forbidden multicast router ports.

**Syntax**
```
config router_ports_forbidden [vlan <vlan_name 32> | vlanid <vidlist>] [add | delete] <portlist>
```

**Description**
This command allows designation of a port or range of ports as being forbidden to multicast-enabled routers. This will ensure that multicast packets will not be forwarded to this port – regardless of protocol, etc.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the router port resides.
- `<vidlist>` – The VIDs of the VLAN for which IGMP snooping is to be configured.
- `[add | delete]` – Specifies whether to add or delete forbidden ports of the specified VLAN.
- `<portlist>` – Specifies a range of ports that will be configured as forbidden router ports.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To set up forbidden router ports:

```
DES-3528:5#config router_ports_forbidden vlan default add 1-10
Command: config router_ports_forbidden vlan default add 1-10
Success.
DES-3528:5#
```
**enable igmp_snooping**

**Purpose**
Used to enable IGMP snooping on the Switch.

**Syntax**
`enable igmp_snooping`

**Description**
This command allows users to enable IGMP snooping on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable IGMP snooping on the Switch:

```
DES-3528:5#enable igmp_snooping
Command: enable igmp_snooping
Success.
DES-3528:5#
```

**disable igmp_snooping**

**Purpose**
Used to enable IGMP snooping on the Switch.

**Syntax**
`disable igmp_snooping`

**Description**
This command disables IGMP snooping on the Switch.

**Parameters**
Entering this command without the parameter will disable igmp snooping on the Switch.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To disable IGMP snooping on the Switch:

```
DES-3528:5#disable igmp_snooping
Command: disable igmp_snooping
Success.
DES-3528:5#
```

**show igmp_snooping**

**Purpose**
Used to show the current status of IGMP snooping on the Switch.

**Syntax**
`show igmp_snooping {vlan <vlan_name 32> | vlanid <vidlist>}`

**Description**
This command will display the current IGMP snooping configuration on the Switch.

**Parameters**
`<vlan_name 32>` – The name of the VLAN for which to view the IGMP snooping configuration.
`<vidlist>` – The VIDs of the VLAN for which IGMP snooping is to be configured.

**Restrictions**
None.

Example usage:

To show IGMP snooping:

```
DES-3528:5#show igmp_snooping
```

196
show igmp_snooping

IGMP Snooping Global State : Enabled
Data Driven Learning Max Entries : 128

VLAN Name : default

show router_ports

Purpose
Used to display the currently configured router ports on the Switch.

Syntax
show router_ports [vlan <vlan_name 32> | vlanid <vidlist> | all ] {[static | dynamic | forbidden]}

Description
This command will display the router ports currently configured on the Switch.

Parameters
<vlan_name 32> – The name of the VLAN on which the router port resides.
<vidlist> – The VIDs of the VLAN for which IGMP snooping is to be configured.
static – Displays router ports that have been statically configured.
dynamic – Displays router ports that have been dynamically configured.
forbidden – Displays router ports that are forbidden.

Restrictions
None.

Example usage:
To display the router ports.
Command: show router_ports all

VLAN Name : default
Static Router Port : 1-10
Dynamic Router Port :
  Router IP :
Forbiden Router Port :

Total Entries: 1

DES-3528:5#
show igmp_snooping group

Purpose
Used to display the current IGMP snooping configuration on the Switch.

Syntax
show igmp_snooping group [(vlan <vlan_name 32> | vlanid <vidlist> | ports <portlist>] {ipaddr}>] {data_driven}

Description
This command will display the current IGMP setup currently configured on the Switch.

Parameters
<vlan_name 32> – The name of the VLAN for which to view IGMP snooping group information.
<vidlist> – The VIDs of the VLAN for which IGMP snooping is to be configured.
<portlist> – The list of ports for which to view IGMP snooping group information.
<ipaddr> – To view the information of this specified group.
data_driven – To view the groups learnt by data driven only.

If no parameter is specified, the system will display all current IGMP snooping groups.

Restrictions
None.

Example usage:
To view the current IGMP snooping group:

DES-3528:5#show igmp_snooping group
Command: show igmp_snooping group

Source/Group : 10.0.0.2/255.0.0.2
VLAN Name/VID : default/1
Member Ports : 1-2
UP Time : 127
Expiry Time : 120
Filter Mode : INCLUDE

Source/Group : 10.0.0.2/255.0.0.3

Source/Group : NULL/255.0.0.5
VLAN Name/VID : default/1
Member Ports : 4-5
UP Time : 130
Expiry Time : 120
Filter Mode : EXCLUDE

Source/Group : NULL/255.0.0.5
VLAN Name/VID : default/1
Member Ports :
Router Ports : 24
UP Time : 1335
Expiry Time : 120
Filter Mode : EXCLUDE

DES-3528:5#
show igmp_snooping rate_limit

Purpose
Used to show rate limitation.

Syntax
show igmp_snooping rate_limit [ports <portlist> | vlanid <vidlist>]

Description
This command shows the rate of IGMP control packet that is allowed per port or VLAN.

Parameters
<br><portlist> – Specifies a port or range of ports that will be displayed.
<br><vidlist> – Specifies a VLAN or range of VLANs that will be displayed.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To show rate limitation:

DES-3528:5#show igmp_snooping rate_limit ports 1
Command: show igmp_snooping rate_limit ports 1

<table>
<thead>
<tr>
<th>Port</th>
<th>Rate Limitation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>No Limitation</td>
</tr>
</tbody>
</table>

Total Entries: 1

DES-3528:5#

config igmp_snooping rate_limit

Purpose
Used to configure rate limitation.

Syntax
config igmp_snooping rate_limit [ports <portlist> | vlanid <vidlist>] [<value 1-1000> | no_limit]

Description
This command configures the rate of IGMP control packets that are allowed per port or VLAN.

Parameters
<br><portlist> – Specifies a port or range of ports that will be displayed.
<br><vidlist> – Specifies a VLAN or range of VLANs that will be displayed.
<br><value 1-1000> – Specifies the rate of IGMP control packet that the switch can process on a specific port or VLAN. The rate is specified in packets per second. The packets that exceeds the limited rate will be dropped. The default setting is no_limit.
<br>no_limit – Allows users to configure the rate limitation to no limit.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure rate limitation:

DES-3528:5#config igmp_snooping rate_limit ports 1 100
Command: config igmp_snooping rate_limit ports 1 100

Success.

DES-3528:5#

show igmp_snooping forwarding

Purpose
Used to display the current IGMP snooping forwarding information on the Switch.
show igmp_snooping forwarding

| Syntax          | show igmp_snooping forwarding { [vlan <vlan_name 32> | vlanid <vidlist>] } |
|-----------------|--------------------------------------------------------------------------------|
| Description     | This command will display the current IGMP forwarding information on the Switch.|
| Parameters      |                                                                                     |
|                 | <vlan_name 32> – The name of the VLAN for which to view IGMP snooping forwarding     |
|                 | information. If not specified, all VLAN’s IGMP snooping forwarding information will  |
|                 | be displayed.                                                                        |
|                 | <vidlist> – The list of the VLAN IDs for which to view IGMP snooping forwarding       |
|                 | information. If not specified, all VLAN’s IGMP snooping forwarding information will  |
|                 | be displayed.                                                                        |
| Restrictions    | None.                                                                                |

Example usage:

To view the current IGMP snooping forwarding information:

```
DES-3528:5#show igmp_snooping forwarding
Command: show igmp_snooping forwarding

VLAN Name : default
Source IP : *
Multicast Group : 225.1.1.1
Port Member : 3

Total Entries : 1
```

create igmp_snooping static_group

Example usage:

To clear IGMP snooping statistic counter:

```
DES-3528:5#clear igmp_snooping statistic counter
Command: clear igmp_snooping statistic counter
Success.
DES-3528:5#
```

config igmp_snooping data_driven_learning max_learned_entry

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the max number of groups that can be learned by data driven.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config igmp_snooping data_driven_learning max_learned_entry &lt;value 1-1024&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the maximum number of groups that can be learned by data driven.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;value 1-1024&gt; -- The max number of groups that can be learned by data driven.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the max number of groups that can be learned by data driven:

```
DES-3528:5#config igmp_snooping data_driven_learning max_learned_entry 100
Command: config igmp_snooping data_driven_learning max_learned_entry 100
Success.
DES-3528:5#
```
**config igmp_snooping data_driven_learning**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the data driven learning of an IGMP snooping group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config igmp_snooping data_driven_learning [all</td>
</tr>
</tbody>
</table>
| Description      | This command is used to configure the data driven learning of an IGMP snooping group. When data-driven learning is enabled for the VLAN, the switch receives the IP multicast traffic on this VLAN, and an IGMP snooping group will be created. The learning of an entry is not activated by IGMP membership registration, but by the multicast traffic. For an ordinary IGMP snooping entry, the IGMP protocol will take care of the aging out of the entry. For a data-driven entry, the entry can be specified so that it does not age out or age out by the aged timer. When data driven learning is enabled and data driven table is not full, the multicast filtering mode for all VLANs will be ignored. If the data driven learning table is full, the multicast traffic will be forwarded based on the setting of multicast filtering mode.  

**NOTE:** If a data-driven group is created by the multicast traffic, and the same IGMP group joins from a member ports later, then the data-driven group will become an ordinary IGMP snooping group. |
| Parameters       | `vlan_name <vlan_name>` – The name of the VLAN for which IGMP snooping data driven learning is to be configured.  
`vlanid <vidlist>` – The VID of the VLAN for which IGMP snooping data driven learning is to be configured.  
`state [enable | disable]` – Allows users to enable or disable IGMP snooping data driven learning for the specified VLAN.  
`aged_out [enable | disable]` – Allows users to enable or disable the aged_out time of the IGMP Snooping data driven learning for the specified VLAN.  
`expiry_time <second>` – Allows users to set the time that an IGMP Snooping data driven learning group will expire for the specified VLAN. |
| Restrictions     | Only Administrator and Operator-level users can issue this command. |

**Example usage:**

To enable data driven learning on VLAN default:

```
DES-3528:5# config igmp_snooping data_driven_learning vlan_name default state enable aged_out enable expiry_time 270
```

Command: `config igmp_snooping data_driven_learning vlan_name default state enable aged_out enable expiry_time 270`

Success.

DES-3528:5#
clear igmp_snooping data_driven_group

**Purpose**
Used to delete the IGMP snooping group learned by data driven.

**Syntax**
clear igmp_snooping data_driven_group [ all | [vlan_name <vlan_name> | vlanid <vidlist>] [ipaddr] [all]]

**Description**
This command is used to delete the IGMP snooping group learned by data driven.

**Parameters**
- `all` – Delete all groups learnt by data driven.
- `vlan_name <vlan_name 32>` – The name of the VLAN for which IGMP snooping data driven learning group is to be deleted.
- `vlanid <vidlist>` – The VID of the VLAN for which IGMP snooping data driven learning group is to be deleted.
- `<ipaddr>` – The group address for which IGMP snooping data driven learning group is to be deleted on the specified VLAN.
- `<all>` – All groups learnt by data driven on the specified VLAN will be deleted.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To delete all groups learnt by data driven on VLAN default:

```
DES-3528:5#clear igmp_snooping data_driven_group vlan_name default all
```
Command: clear igmp_snooping data_driven_group vlan_name default all
Success.

DES-3528:5#

The DHCP relay commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config dhcp_relay</td>
<td>{hops &lt;value 1-16&gt;</td>
</tr>
<tr>
<td>config dhcp_relay add ipif</td>
<td>&lt;ipif_name 12&gt; &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>config dhcp_relay delete ipif</td>
<td>&lt;ipif_name 12&gt; &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>config dhcp_relay option_82 state</td>
<td>[enable</td>
</tr>
<tr>
<td>config dhcp_relay option_82 check</td>
<td>[enable</td>
</tr>
<tr>
<td>config dhcp_relay option_82 policy</td>
<td>[replace</td>
</tr>
<tr>
<td>config dhcp_relay option_82 remote_id</td>
<td>[default</td>
</tr>
<tr>
<td>show dhcp_relay</td>
<td>{ipif &lt;ipif_name 12&gt;}</td>
</tr>
<tr>
<td>enable dhcp_relay</td>
<td></td>
</tr>
<tr>
<td>disable dhcp_relay</td>
<td></td>
</tr>
<tr>
<td>config dhcp_relay option_60 state</td>
<td>[enable</td>
</tr>
<tr>
<td>config dhcp_relay option_60 add</td>
<td>string &lt;multiword 255&gt; relay &lt;ipaddr&gt; [exact-match</td>
</tr>
<tr>
<td>config dhcp_relay option_60 default</td>
<td>[relay &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>config dhcp_relay option_60 delete</td>
<td>[string &lt;multiword 255&gt; {relay &lt;ipaddress&gt;}</td>
</tr>
<tr>
<td>show dhcp_relay option_60</td>
<td>{string &lt;multiword 255&gt;</td>
</tr>
<tr>
<td>config dhcp_relay option_61 state</td>
<td>[enable</td>
</tr>
<tr>
<td>config dhcp_relay option_61 default</td>
<td>[relay &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>config dhcp_relay option_61 add</td>
<td>[mac_address &lt;macaddr&gt;</td>
</tr>
<tr>
<td>config dhcp_relay option_61 delete</td>
<td>[mac_address &lt;macaddr&gt;</td>
</tr>
<tr>
<td>show dhcp_relay option_61</td>
<td></td>
</tr>
<tr>
<td>config dhcp_local_relay vlan</td>
<td>&lt;vlan_name 32&gt; state [enable</td>
</tr>
<tr>
<td>enable dhcp_local_relay</td>
<td></td>
</tr>
<tr>
<td>disable dhcp_local_relay</td>
<td></td>
</tr>
<tr>
<td>show dhcp_local_relay</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed in detail in the following sections.

**config dhcp_relay**

**Purpose**
Used to configure the DHCP/BOOTP relay feature of the switch.

**Syntax**
config dhcp_relay {hops <value 1-16> | time <sec 0-65535>}(1)

**Description**
This command is used to configure the DHCP/BOOTP relay feature.

**Parameters**
- **hops <value 1-16>** – Specifies the maximum number of relay agent hops that the DHCP packets can cross.
- **time <sec 0-65535>** – If this time is equal to or more than the entered value, the Switch will relay the DHCP packet.

**Restrictions**
Only Administrator and Operator-level users can issue this command.
Example usage:
To config DHCP relay:

```
DES-3528:5#config dhcp_relay hops 2 time 23
Command: config dhcp_relay hops 2 time 23
Success.
DES-3528:5#
```

### config dhcp_relay add ipif

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to add an IP destination address to the switch's DHCP/BOOTP relay table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config dhcp_relay add ipif &lt;ipif_name 12&gt; &lt;ipaddr&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command adds an IP address as a destination to forward (relay) DHCP/BOOTP relay packets to.</td>
</tr>
</tbody>
</table>
| Parameters | `<ipif_name 12>` – The name of the IP interface in which DHCP relay is to be enabled.  
`<ipaddr>` – The DHCP server IP address. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:
To add an IP destination to the DHCP relay table:

```
DES-3528:5#config dhcp_relay add ipif System 10.58.44.6
Command: config dhcp_relay add ipif System 10.58.44.6
Success.
DES-3528:5#
```

### config dhcp_relay delete ipif

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete one or all IP destination addresses from the Switch's DHCP/BOOTP relay table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config dhcp_relay delete ipif &lt;ipif_name 12&gt; &lt;ipaddr&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete an IP destination addresses in the Switch’s DHCP/BOOTP relay table.</td>
</tr>
</tbody>
</table>
| Parameters | `<ipif_name 12>` – The name of the IP interface that contains the IP address below.  
`<ipaddr>` – The DHCP server IP address. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:
To delete an IP destination from the DHCP relay table:

```
DES-3528:5#config dhcp_relay delete ipif System 10.58.44.6
Command: config dhcp_relay delete ipif System 10.58.44.6
Success.
DES-3528:5#
```
config dhcp_relay option_82 state

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the state of DHCP relay agent information option 82 of the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config dhcp_relay option_82 state [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the state of DHCP relay agent information option 82 of the switch.</td>
</tr>
</tbody>
</table>
| Parameters | enable – When this field is toggled to Enabled the relay agent will insert and remove DHCP relay information (option 82 field) in messages between DHCP server and client. When the relay agent receives the DHCP request, it adds the option 82 information, and the IP address of the relay agent (if the relay agent is configured), to the packet. Once the option 82 information has been added to the packet it is sent on to the DHCP server. When the DHCP server receives the packet, if the server is capable of option 82, it can implement policies like restricting the number of IP addresses that can be assigned to a single remote ID or circuit ID. Then the DHCP server echoes the option 82 field in the DHCP reply. The DHCP server unicasts the reply to the back to the relay agent if the request was relayed to the server by the relay agent. The switch verifies that it originally inserted the option 82 data. Finally, the relay agent removes the option 82 field and forwards the packet to the switch port that connects to the DHCP client that sent the DHCP request.  
 disable – If the field is toggled to disable the relay agent will not insert and remove DHCP relay information (option 82 field) in messages between DHCP servers and clients, and the check and policy settings will have no effect. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure DHCP relay option 82 state:

DES-3528:5#config dhcp_relay option_82 state enable
Command: config dhcp_relay option_82 state enable
Success.

DES-3528:5#

config dhcp_relay option_82 check

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the checking mechanism of DHCP relay agent information option 82 of the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config dhcp_relay option_82 check [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the checking mechanism of DHCP/BOOTP relay agent information option 82 of the switch.</td>
</tr>
</tbody>
</table>
| Parameters | enable – When the field is toggled to enable, the relay agent will check the validity of the packet’s option 82 field. If the switch receives a packet that contains the option 82 field from a DHCP client, the switch drops the packet because it is invalid. In packets received from DHCP servers, the relay agent will drop invalid messages.  
 disable – When the field is toggled to disable, the relay agent will not check the validity of the packet’s option 82 field. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure DHCP relay option 82 check:
config dhcp_relay option_82 policy

**Purpose**
Used to configure the reforwarding policy of relay agent information option 82 of the Switch.

**Syntax**
```bash
config dhcp_relay option_82 policy [replace | drop | keep]
```

**Description**
This command is used to configure the reforwarding policy of DHCP relay agent information option 82 of the switch.

**Parameters**
- `replace` – The option 82 field will be replaced if the option 82 field already exists in the packet received from the DHCP client.
- `drop` – The packet will be dropped if the option 82 field already exists in the packet received from the DHCP client.
- `keep` – The option 82 field will be retained if the option 82 field already exists in the packet received from the DHCP client.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure DHCP relay option 82 policy:

```
DES-3528:5#config dhcp_relay option_82 policy replace
Command: config dhcp_relay option_82 policy replace
Success.
DES-3528:5#
```

config dhcp_relay option_82 remote_id

**Purpose**
Used to configure the content in Remote ID suboption.

**Syntax**
```bash
config dhcp_relay option_82 remote_id [default | user_define <desc 32>]
```

**Description**
This command is used to configure the content in Remote ID suboption.

**Parameters**
- `default` – Uses the Switch’s system MAC address as the remote ID.
- `User_define <desc 32>` – Uses user-defined string as the remote ID. Space is allowed in the string.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure DHCP relay option 82 remote ID:

```
DES-3528:5# config dhcp_relay option_82 remote_id user_define "D-Link L2 Switch"
Command: config dhcp_relay option_82 remote_id user_define "D-Link L2 Switch"
Success.
DES-3528:5#
```
show dhcp_relay

**Purpose**
Used to display the current DHCP/BOOTP relay configuration.

**Syntax**
```
show dhcp_relay {ipif <ipif_name 12>}
```

**Description**
This command will display the current DHCP relay configuration for the Switch, or if an IP
interface name is specified, the DHCP relay configuration for that IP interface.

**Parameters**
- `ipif <ipif_name 12>` – The name of the IP interface for which to display the current DHCP
  relay configuration.

**Restrictions**
None.

Example usage:

To show the DHCP relay configuration:

```
DES-3528:5#show dhcp_relay
Command: show dhcp_relay

DHCP/Bootp Relay Status : Disabled
DHCP/Bootp Hops Count Limit : 4
DHCP/Bootp Relay Time Threshold : 0
DHCP Vendor Class Identifier Option 60 State: Disabled
DHCP Client Identifier Option 61 State: Disabled
DHCP Relay Agent Information Option 82 State : Disabled
DHCP Relay Agent Information Option 82 Check : Disabled
DHCP Relay Agent Information Option 82 Policy : Replace
DHCP Relay Agent Information Option 82 Remote ID : 00-21-91-AF-EA-00

Interface    Server 1        Server 2        Server 3        Server 4
------------ --------------- --------------- --------------- ---------------

DES-3528:5#
```

Example usage:

To show a single IP destination of the DHCP relay configuration:

```
DES-3528:5#show dhcp_relay ipif System
Command: show dhcp_relay ipif System

DHCP/Bootp Relay Status : Disabled
DHCP/Bootp Hops Count Limit : 4
DHCP/Bootp Relay Time Threshold : 0
DHCP Vendor Class Identifier Option 60 State: Disabled
DHCP Client Identifier Option 61 State: Disabled
DHCP Relay Agent Information Option 82 State : Disabled
DHCP Relay Agent Information Option 82 Check : Disabled
DHCP Relay Agent Information Option 82 Policy : Replace
DHCP Relay Agent Information Option 82 Remote ID : 00-21-91-AF-EA-00

Interface    Server 1        Server 2        Server 3        Server 4
------------ --------------- --------------- --------------- ---------------

DES-3528:5#
```
### enable dhcp_relay

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purpose</td>
<td>Used to enable the DHCP/BOOTP relay function on the Switch.</td>
</tr>
<tr>
<td>Syntax</td>
<td><code>enable dhcp_relay</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable the DHCP/BOOTP relay function on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable DHCP relay:

```
DES-3528:5#enable dhcp_relay
Command: enable dhcp_relay
Success.
DES-3528:5#
```

### disable dhcp_relay

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purpose</td>
<td>Used to disable the DHCP/BOOTP relay function on the Switch.</td>
</tr>
<tr>
<td>Syntax</td>
<td><code>disable dhcp_relay</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable the DHCP/BOOTP relay function on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable DHCP relay:

```
DES-3528:5#disable dhcp_relay
Command: disable dhcp_relay
Success.
DES-3528:5#
```

### config dhcp_relay option_60 state

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purpose</td>
<td>This command is used to configure DHCP relay agent information option 60 state of the Switch. Used to config dhcp_relay option_60 state.</td>
</tr>
<tr>
<td>Syntax</td>
<td>`config dhcp_relay option_60 state [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command decides whether DHCP relay will process the DHCP option 60 or not. When enabled, if packets do not have option 60, then the relay servers cannot be determined based on option 60. Because the priority of option 60 and option 61 is higher than per IPIF configured servers, if the relay servers are determined based on option 60 or option 61, then per IPIF configured servers will be ignored. If the relay servers are determined neither by option 60 nor option 61, then per IPIF configured servers will be used to determine the relay servers.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>enable</code> – Enables the fuction.</td>
</tr>
<tr>
<td></td>
<td><code>disable</code> – Disables the fuction.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To configure DHCP relay option 60 state:

DES-3528:5# config dhcp_relay option_60 state enable
Command: config dhcp_relay option_60 state enable
Success.

DES-3528:5#

### config dhcp_relay option_60 add

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command is used to add a entry for dhcp_relay option_60</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config dhcp_relay option_60 add string &lt;mutiword 255&gt; relay &lt;ipaddr&gt; [exact-match</td>
</tr>
<tr>
<td>Description</td>
<td>This command configures the option 60 relay rules. Note that different strings can be specified with the same relay server, and the same string can be specified with multiple relay servers. The system will relay the packet to all the matching servers.</td>
</tr>
</tbody>
</table>
| Parameters | `exact-match` – The option 60 string in the packet must fully match the specified string.  
`partial-match` – The option 60 string in the packet only need partial match with the specified string.  
`string` – The specified string.  
`ipaddress` – Specify a relay server IP address. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure a new dhcp relay with option 60:

DES-3528:5# config dhcp_relay option_60 add string "abc" relay 10.90.90.1 exact-match
Command: config dhcp_relay option_60 add string "abc" relay 10.90.90.1 exact-match
Success.

DES-3528:5#

### config dhcp_relay option_60 default

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command is used to configure dhcp_relay option_60 default relay servers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config dhcp_relay option_60 default [relay &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>When there are no matching servers found for the DHCP client request packet based on option 60 string, the relay servers will be determined by the default relay server settings. On the other hand, if the drop option is specified, the packet with no matching rules found will be dropped without further actions. If the setting states relay, then the packet will be processed further based on option 61. The final relay servers will be the union of option 60 default relay servers and the relay servers determined by option 61.</td>
</tr>
</tbody>
</table>
| Parameters | `ipaddress` – The specified ipaddress for dhcp_relay forward. Specifies a relay server IP for the packet that has matching option 60 rules.  
`drop` – Specify to drop the packet that has no matching option 60 rules.  
`relay` – The packet will be relayed based on the relay rules. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure the DHCP relay default option 60:

DES-3528:5# config dhcp_relay option_60 default
DES-3528:5#config dhcp_relay option_60 default mode drop
Command: config dhcp_relay option_60 default mode drop
Success.
DES-3528:5#

### config dhcp_relay option_60 delete

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command is used to delete dhcp_relay option_60 entry.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config dhcp_relay option_60 delete [string &lt;mutiword 255&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command can delete the entry specified by user. When all is specified, all rules excluding the default rules are deleted</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>string</code> – Deletes all the entries whose string is equal to the string specified if the IP address is not specified.</td>
</tr>
<tr>
<td></td>
<td><code>relay &lt;ipaddr&gt;</code> - Deletes one entry, whose string and IP address are equal to the string and IP address specified by the user.</td>
</tr>
<tr>
<td></td>
<td><code>ipaddress</code> – Deletes any entry whose IP address is equal to the specified IP address.</td>
</tr>
<tr>
<td></td>
<td><code>default</code> – Deletes any default relay IP address if ipaddress is not specified.</td>
</tr>
<tr>
<td></td>
<td><code>Default&lt;ipaddr&gt;</code> – Deletes all default relay ipaddress if IP address is not specified.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete the DHCP relay option 60:

DES-3528:5#config dhcp_relay option_60 delete all
Command: config dhcp_relay option_60 delete all
Success.
DES-3528:5#

### show dhcp_relay option_60

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command is used to show dhcp_relay option_60 entry.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show dhcp_relay option_60 [(string &lt;mutiword 255&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the dhcp_relay option_60 entry by the user specified.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>ipaddress</code> – Shows the entry whose ipaddress is equal to the specified ipaddress.</td>
</tr>
<tr>
<td></td>
<td><code>default</code> – Shows the default behaviour of dhcp_relay option60.</td>
</tr>
<tr>
<td></td>
<td><code>string</code> – Shows the entry whose string is equal to the string of a specified user.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the DHCP relay option 60:
DES-3528:5#show dhcp_relay option_60
Command: show dhcp_relay option_60

Default Processing Mode: Drop

Default Servers:

Matching Rules:

<table>
<thead>
<tr>
<th>String</th>
<th>Match Type</th>
<th>IP Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>abc</td>
<td>Exact Match</td>
<td>10.90.90.1</td>
</tr>
</tbody>
</table>

Total Entries : 1

DES-3528:5#

**config dhcp_relay option_61 state**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command is used to configure the DHCP relay option 61 state.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config dhcp_relay option_61 state [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command decides whether DHCP relay will process the DHCP option 61 or not. When enabled, if packets do not have option 61, then the relay servers cannot be determined based on option 61. Because the priority of option 60 and option 61 is higher than per IPIF configured servers, if the relay servers are determined based on option 60 or option 61, then per IPIF configured servers will be ignored. If the relay servers are determined neither by option 60 nor option 61, then per IPIF configured servers will be used to determine the relay servers.</td>
</tr>
<tr>
<td>Parameters</td>
<td>enable – Enables the fuction dhcp_relay use option_61 ruler to relay dhcp packet.</td>
</tr>
<tr>
<td></td>
<td>disable – Disables the fuction dhcp_relay use option_61 ruler to relay dhcp packet.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the state of DHCP relay option 61:

DES-3528:5#config dhcp_relay option_61 state enable
Command: config dhcp_relay option_61 state enable

Success.

DES-3528:5#
**config dhcp_relay option_61 add**

**Purpose**
This command is used to add a rule for dhcp_relay option_61.

**Syntax**
```
config dhcp_relay option_61 add [mac_address <macaddr> | string <desc_long 255>] [relay <ipaddr> | drop]
```

**Description**
This command adds a rule to determine the relay server based on option 61. The matched rule can be based on either the MAC address or a user-specified string. Only one relay server can be specified for a MAC-address or a string. Both option 60 and option 61 can assign particular DHCP relay sever, so they can altogether determine which relay server will be selected.

**Parameters**
- `mac_address` – The client’s client-ID which is the hardware address of client.
- `string` – The client’s client-ID, which is specified by administrator.
- `relay` – Specify to relay the packet to a IP address.
- `drop` – Specify to drop the packet.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure the DHCP relay option 61:

```
DES-3528:5#config dhcp_relay option_61 add mac_address 00-01-22-33-44-55 drop
Command: config dhcp_relay option_61 add mac_address 00-01-22-33-44-55 drop
Success.
DES-3528:5#
```

**config dhcp_relay option_61 default**

**Purpose**
Used to determine the default action for option 61.

**Syntax**
```
config dhcp_relay option_61 default [relay <ipaddr> | drop]
```

**Description**
This command is used to determine the rule to process those packets that have no option 61 matching rules. The default default-rule is drop.

**Parameters**
- `relay` – Specifies to relay the packet that has no option 61 matching rules to an IP address.
- `drop` – Specifies to drop the packet that has no option 61 matching rules.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure the DHCP relay option 61 default:

```
DES-3528:5#config dhcp_relay option_61 default drop
Command: config dhcp_relay option_61 default drop
Success.
DES-3528:5#
```
**config dhcp_relay option_61 delete**

**Purpose**
This command is used to delete an option 61 rule.

**Syntax**
```
config dhcp_relay option_61 delete [mac_address <macaddr> | string <desc_long 255> | all]
```

**Description**
This command is used to delete an option 61 rule.

**Parameters**
- `mac_address` – The entry with the specified MAC address will be deleted.
- `string` – The entry with the specified string will be deleted.
- `all` – All rules excluding the default rule will be deleted.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To delete the DHCP relay option 61 rules:

```
DES-3528:5#config dhcp_relay option_61 delete mac_address 00-11-22-33-44-55
Command: config dhcp_relay option_61 delete mac_address 00-11-22-33-44-55
Success
DES-3528:5#
```

**show dhcp_relay option_61**

**Purpose**
This command displays DHCP relay option 61.

**Syntax**
```
show dhcp_relay option_61
```

**Description**
This command displays DHCP relay option 61.

**Parameters**
None.

**Restrictions**
None.

Example usage:
To display the DHCP relay option 61:

```
DES-3528:5#show dhcp_relay option_61
Command: show dhcp_relay option_61

Default Relay Rule:Drop

### `config dhcp_local_relay vlan`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable DHCP local relay function to the vlan.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config dhcp_local_relay vlan &lt;vlan_name 32&gt; state [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable or disable the DHCP local relay function for a specified vlan. DHCP option 82 will also be automatically added.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name 32&gt;</code> – The name of the VLAN to be enabled by DHCP local relay. State – Enable or disable the DHCP local relay for a specified VLAN.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable DHCP local relay for the default VLAN:

```
DES-3528:5#config dhcp_local_relay vlan default state enable
Command: config dhcp_local_relay vlan default state enable
Success.
DES-3528:5#
```

### `enable dhcp_local_relay`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable the DHCP local relay function on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable dhcp_local_relay</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable the DHCP local relay function on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable the DHCP local relay function:

```
DES-3528:5#enable dhcp_local_relay
Command: enable dhcp_local_relay
Success.
DES-3528:5#
```

### `disable dhcp_local_relay`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the DHCP local relay function on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable dhcp_local_relay</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable the DHCP local relay function on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the DHCP local relay function:

```
```
show dhcp_local_relay

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current DHCP local relay configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show dhcp_local_relay</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the current DHCP local relay configuration.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the local dhcp relay status:

```
DES-3528:5#show dhcp_local_relay
Command: show dhcp_local_relay

DHCP/BOOTP Local Relay Status : Disabled
DHCP/BOOTP Local Relay VID List : 1
```

DES-3528:5#
802.1X COMMANDS (INCLUDING GUEST VLANs)

The Switch implements the server-side of the IEEE 802.1X Port-based and Host-based Network Access Control. This mechanism is intended to allow only authorized users, or other network devices, access to network resources by establishing criteria for each port on the Switch that a user or network device must meet before allowing that port to forward or receive frames.

<table>

### enable 802.1x

**Purpose**
Used to enable the 802.1X server on the Switch.

**Syntax**
`enable 802.1x`

**Description**
This command enables the 802.1X Network Access control server application on the Switch. To select between Port-based or Host-based, use the `config 802.1x auth_mode` command.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To enable 802.1X switch wide:

```
DES-3528:5#enable 802.1x
Command: enable 802.1x
Success.
DES-3528:5#
```

### disable 802.1x

**Purpose**
Used to disable the 802.1X server on the Switch.

**Syntax**
`disable 802.1x`

**Description**
This command is used to disable the 802.1X Network Access control server application on the Switch. To select between Port-based or Host-based, use the `config 802.1x auth_mode` command.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To disable 802.1X on the Switch:

```
DES-3528:5#disable 802.1x
Command: disable 802.1x
Success.
DES-3528:5#
```
create 802.1x user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create 802.1X user.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>create 802.1x user &lt;username 15&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command creates a 802.1X user.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;username 15&gt;</code> – Specifies adding user name</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To create user “test”:

```
DES-3528:5# create 802.1x user test
Command: `create 802.1x user test`

Enter a case-sensitive new password:
Enter the new password again for confirmation:

Success.
```

delete 802.1x user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete 802.1X user.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>delete 802.1x user &lt;username 15&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command deletes specified user.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;username 15&gt;</code> – Specifies deleting user name</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete user “test”:

```
DES-3528:5# delete 802.1x user test
Command: `delete 802.1x user test`

Success.
```

show 802.1x user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show 802.1X user.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show 802.1x user</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the 802.1X user account information.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the 802.1X user information:
DES-3528:5#show 802.1x user
Command: show 802.1x user

Current Accounts:
Index            Username
--------------   ---------------
1               test

cfg802.1x auth_protocol

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the 802.1X auth protocol</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x auth_protocol [local</td>
</tr>
<tr>
<td>Description</td>
<td>This command configures the 802.1X auth protocol.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>local</code> – Specifies the auth protocol as local.</td>
</tr>
<tr>
<td></td>
<td><code>radius_eap</code> – Specifies the auth protocol as RADIUS EAP.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the 802.1X RADIUS EAP:

DES-3528:5#config 802.1x auth_protocol radius_eap
Command: config 802.1x auth_protocol radius_eap

Success.
DES-3528:5#

cfg802.1x auth_failover

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure 802.1X auth failover</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x auth_failover [enable</td>
</tr>
<tr>
<td>Description</td>
<td>When the authentication failover is disabled and Radius servers are unreachable, the authentication will fail. When the authentication failover is enabled and Radius servers authentication are unreachable, the local database will be used to do the authentication. The state is disabled by default.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>enable</code> – Enables the authentication database fail over.</td>
</tr>
<tr>
<td></td>
<td><code>disable</code> – Disables the authentication database fail over.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the 802.1X auth_failover:
DES-3528:5# config 802.1x auth_failover enable

Command: config 802.1x auth_failover enable
Success.

config 802.1x fwd_pdu system

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the forwarding of EAPOL PDU when 802.1X is disabled.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config 802.1x fwd_pdu system [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This is a global setting to control the forwarding of EAPOL PDU. When 802.1X functionality is disabled globally or for a port, if 802.1X fwd_pdu is enabled both globally and for the port, a received EAPOL packet on the port will be flooded in the same VLAN to those ports with 802.1X fwd_pdu enabled and 802.1X disabled (globally or just for the port). The default state is disable.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure forwarding of EAPOL PDU

DES-3528:5#config 802.1x fwd_pdu system enable
Command: config 802.1x fwd_pdu system enable
Success.
DES-3528:5#

config 802.1x authorization network

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable the accepting of authorized configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config 802.1x authorization network radius [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable or disable the accepting of authorized configuration. When the authorization is enabled for 802.1x's radius, the authorized data assigned by the RADUIS server will be accepted by the Switch if the global authorization network is enabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>radius – When specified to enable, the authorization data assigned by the RADUIS server will be accepted by the Switch if the global authorization network is enabled. The default state is enabled.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable to accept the authorized data assgined from the RADIUS server.

DES-3528:5# config 802.1x authorization network radius disable
Command: config 802.1x authorization network radius disable
Success.
DES-3528:5#
**config 802.1x fwd_pdu ports**

**Purpose**
Used to configure if the port will flood EAPOL PDU when 802.1X functionality is disabled.

**Syntax**
`config 802.1x fwd_pdu ports [<portlist> | all] [enable | disable]`

**Description**
This is a per port setting to control the forwarding of EAPOL PDU. When 802.1X functionality is disabled globally or for a port, and if 802.1X fwd_pdu is enabled both globally and for the port, a received EAPOL packet on the port will be flooded in the same VLAN to those ports with 802.1X fwd_pdu enabled and 802.1X disabled (globally or just for the port). The default state is disable.

**Parameters**
- `portlist` - Specifies a range of ports to be displayed.
- `all` - Specifies all of ports to be displayed.
- `enable` - Enable flood EAPOL PDU on the ports.
- `disable` - Disable flood EAPOL PDU on the ports.

**Restrictions**
Only Administrator level users can issue this command.

**Example usage:**

To configure 802.1X fwd PDU for ports:

```
DES-3528:5#config 802.1x fwd_pdu ports 1-2 enable
Command: config 802.1x fwd_pdu ports 1-2 enable
Success.
DES-3528:5#
```

**show 802.1x**

**Purpose**
Used to display the 802.1X state or configurations.

**Syntax**
`show 802.1x { [auth_state | auth_configuration] ports {<portlist>}}`

**Description**
This command displays the 802.1X state or configurations.

**Parameters**
- `auth_state` – Used to display 802.1X authentication state information of some ports.
- `auth_configuration` – Used to display 802.1X configurations of some ports.
- `portlist` – Specifies a range of ports to be displayed.

**Restrictions**
None.

**Example usage:**

To display the 802.1X states:

```
DES-3528:5#show 802.1x
```
To display the 802.1X system level configurations:

```
DES-3528:5# show 802.1x
Command: show 802.1x

802.1X : Enabled
Authentication Mode : Port_based
Authentication Protocol : Radius_EAP
Authentication Failover : Disabled
Forward EAPOL PDU : Enabled
Max Users : 448
RADIUS Authorization : Disabled

DES-3528:5#
```

To display the 802.1X configurations:

```
DES-3528:5# show 802.1x auth_state ports 1-3
Command: show 802.1x auth_state ports 1-3

### config 802.1x capability

**Purpose**: Used to configure the port capability.

**Syntax**: `config 802.1x capability ports [<portlist>] | all [authenticator | none]`

**Description**: This command configures the port capability.

**Parameters**:
- `portlist` – Specifies a range of ports to be displayed.
- `all` – Specifies all of ports to be displayed
- `authenticator` – The port that wishes to enforce authentication before allowing access to services that are accessible via that port adopts the authenticator role.
- `none` – Allows the flow of PDUs via the Port

**Restrictions**: Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure the port capability:

```
DES-3528:5#config 802.1x capability ports 1-10 authenticator
```

**Success.**

```
**config 802.1x max _users**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the max number of users that can be learned through 802.1x authentication.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config 802.1x max users [&lt;value 1 – 448&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The setting is a global limitation on the maximum number of users that can be learned through 802.1x authentication.</td>
</tr>
<tr>
<td></td>
<td>In addition to the global limitation, per port max users is also limited. It is specified by config 802.1x auth_parameter command.</td>
</tr>
<tr>
<td>Parameters</td>
<td>Max_users – Specifies the maximum number of users. The number of the max users is 448 by default.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure 802.1x max users:

```
DES-3528:5# config 802.1x max users 200
Command: config 802.1x max users 200
Success.
DES-3528:5#
```
**config 802.1x auth_parameter**

**Purpose**
Used to configure the parameters that control the operation of the authenticator associated with a port.

**Syntax**
```
config 802.1x auth_parameter ports [<portlist> | all] [default | {direction [both | in] | port_control [force_unauth | auto | force_auth] | quiet_period <sec 0-65535> | tx_period <sec 1-65535> | supp_timeout <sec 1-65535> | server_timeout <sec 1-65535> | max_req <value 1-10> | reauth_period <sec 1-65535> | max_users [<value 1-448> | no_limit] | enable_reauth [enable | disable]]
```

**Description**
This command configures the parameters that control the operation of the authenticator associated with a port.

**Parameters**
- **portlist** – Specifies a range of ports to be displayed.
- **all** – Specifies all of ports to be displayed.
- **default** – Sets all parameter to be default value.
- **direction** – Sets the direction of access control.
  - **both**: For bidirectional access control.
  - **in**: For unidirectional access control.
- **port_control** – You can force a specific port to be unconditionally authorized or unauthorized by setting the the parameter of port_control to be force_authorized or force_unauthorized. Besides, the controlled port will reflect the outcome of authentication if port_control is auto.
- **quiet_period** – It is the initialization value of the quietWhile timer. The default value is 60 s and can be any value from 0 to 65535.
- **tx_period** – It is the initialization value of the txWhen timer. The default value is 30 s and can be any value among 1 to 65535.
- **supp_timeout** – The initialization value of the aWhile timer when timing out the supplicant. Its default value is 30 s and can be any value among 1 to 65535.
- **server_timeout** – The initialization value of the aWhile timer when timing out the authentication server. Its default value is 30 and can be any value among 1 to 65535.
- **max_req** – The maximum number of times that the authentication PAE state machine will retransmit an EAP Request packet to the supplicant. Its default value is 2 and can be any number among 1 to 10.
- **reauth_period** – Its a nonzero number of seconds, which is used to be the re-authentication timer. The default value is 3600.
- **max_users** - Specifies per port maximum number of users. The range is 1 to m. The default value is 16.
- **enable_reauth** – You can enable or disable the re-authentication mechanism for a specific port.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure the parameters that control the operation of the authenticator associated with a port:

```
DES-3528:5#config 802.1x auth_parameter ports 1-20 direction both
Command: config 802.1x auth_parameter ports 1-20 direction both
Success.
DES-3528:5#
```
**config 802.1x auth_mode**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure 802.1X authentication mode.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x auth_mode [port_based</td>
</tr>
<tr>
<td>Description</td>
<td>This command configures the authentication mode.</td>
</tr>
</tbody>
</table>
| Parameters | `port_based` – Configure the authentication as Port-Based mode.  
`mac_based` – Configure the authentication as Host-Based mode. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

```
To configure the authentication mode:

DES-3528:5#config 802.1x auth_mode port_based
Command: config 802.1x auth_mode port_based
Success.
DES-3528:5#
```

**config 802.1x init**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to initialize the authentication state machine of some or all ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x [port_based ports [&lt;portlist</td>
</tr>
<tr>
<td>Description</td>
<td>This command used to initialize the authentication state machine of some or all.</td>
</tr>
</tbody>
</table>
| Parameters | `port_based` – This instructs the Switch to init 802.1X functions based only on the port number. Ports approved for init can then be specified  
`mac_based` – This instructs the Switch to init 802.1X functions based only on the host address. MAC addresses approved for init can then be specified.  
`portlist` – Specifies a range of ports to be displayed.  
`all` – Specifies all of ports to be displayed.  
`mac_address` – Host address of client |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

```
To initialize the authentication state machine of some or all:

DES-3528:5#config 802.1x init port_based ports all
Command: config 802.1x init port_based ports all
Success.
DES-3528:5#
```
**config 802.1x reauth**

**Purpose**
Used to configure the 802.1X re-authentication feature of the Switch.

**Syntax**
```
config 802.1x reauth [port_based ports [<portlist> | all] | mac_based [ports] [ <portlist> | all] [mac_address <macaddr>] ]
```

**Description**
This command is used to re-authenticate a previously authenticated device based on port number.

**Parameters**
- **port_based** – This instructs the Switch to re-authorize 802.1X functions based only on the port number. Ports approved for re-authorization can then be specified.
- **mac_based** – This instructs the Switch to re-authorize 802.1X functions based only on the host address. MAC addresses approved for re-authorization can then be specified.
- **ports <portlist>** – Specifies a port or range of ports to be re-authorized.
- **all** – Specifies all of the ports on the Switch.
- **mac_address <macaddr>** – Enter the MAC address to be re-authorized.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure 802.1X reauthentication for ports 1 to 18:

```
DES-3528:5#config 802.1x reauth port_based ports 1-18
Command: config 802.1x reauth port_based ports 1-18
Success.
DES-3528:5#
```

**create 802.1x guest_vlan**

**Purpose**
Used to configure a pre-existing VLAN as a 802.1X Guest VLAN.

**Syntax**
```
create 802.1x guest_vlan <vlan_name 32>
```

**Description**
This command is used to configure a pre-defined VLAN as a 802.1X Guest VLAN. 802.1X Guest VLAN clients are those who have not been authorized for 802.1X or they haven’t yet installed the necessary 802.1X software, yet would still like limited access rights on the Switch.

**Parameters**
- **<vlan_name 32>** – Enter an alphanumeric string of no more than 32 characters to define a pre-existing VLAN as a 802.1X Guest VLAN. This VLAN must have first been created with the `create vlan` command mentioned earlier in this manual.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure a previously created VLAN as a 802.1X Guest VLAN for the Switch:

```
DES-3528:5#create 802.1x guest_vlan Trinity
Command: create 802.1x guest_vlan Trinity
Success.
DES-3528:5#
```
### config 802.1x guest_vlan ports

**Purpose**
Used to configure ports for a pre-existing 802.1X guest VLAN.

**Syntax**
config 802.1x guest_vlan ports [<portlist> | all] state [enable | disable]

**Description**
This command is used to configure ports to be enabled or disabled for the 802.1X guest VLAN.

**Parameters**
- `<portlist>` – Specify a port or range of ports to be configured for the 802.1X Guest VLAN.
- `all` – Specify this parameter to configure all ports for the 802.1X Guest VLAN.
- `state [enable | disable]` – Use these parameters to enable or disable port listed here as enabled or disabled for the 802.1X Guest VLAN.

**Restrictions**
Only Administrator and Operator-level users can issue this command. This VLAN must have already been previously created using the `create vlan` command. If the specific port state changes from an enabled state to a disabled state, these ports will return to the original VLAN.

**Example usage:**
To configure the ports for a previously created 802.1X Guest VLAN as enabled.

```
DES-3528:5#config 802.1x guest_vlan ports 1-5 state enable
Command: config 802.1x guest_vlan ports 1-5 state enable
Success.
DES-3528:5#
```

### show 802.1x guest_vlan

**Purpose**
Used to view the configurations for a 802.1X Guest VLAN.

**Syntax**
show 802.1x guest_vlan

**Description**
This command is used to display the settings for the VLAN that has been enabled as an 802.1X Guest VLAN. 802.1X Guest VLAN clients are those who have not been authorized for 802.1X or they haven’t yet installed the necessary 802.1X software, yet would still like limited access rights on the Switch.

**Parameters**
None.

**Restrictions**
This VLAN must have already been previously created using the `create vlan` command. Only one VLAN can be set as the 802.1X Guest VLAN.

**Example usage:**
To show 802.1X Guest VLAN.

```
DES-3528:5#show 802.1x guest_vlan
Command: show 802.1x guest_vlan

Guest VLAN Setting
---------------------------------------------
Guest VLAN : Trinity
Enable Guest VLAN Ports: 5-8
Success.

DES-3528:5#
```
### delete 802.1x guest_vlan

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to delete a 802.1X Guest VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td><code>delete 802.1x guest_vlan &lt;vlan_name 32&gt;</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is used to delete an 802.1X Guest VLAN. 802.1X Guest VLAN clients are those who have not been authorized for 802.1X or they haven’t yet installed the necessary 802.1X software, yet would still like limited access rights on the Switch.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td><code>&lt;vlan_name 32&gt;</code> – Enter the VLAN name of the 802.1X Guest VLAN to be deleted.</td>
</tr>
<tr>

<td>Only Administrator and Operator-level users can issue this command. This VLAN must have already been previously created using the <code>create vlan</code> command. Only one VLAN can be set as the 802.1X Guest VLAN.</td>
</tr>
</tbody>
</table>

**Example usage:**

To delete a previously created 802.1X Guest VLAN.

```
DES-3528:5#delete 802.1x guest_vlan Trinity
Command: delete 802.1x guest_vlan Trinity
Success.
DES-3528:5#
```

### config radius add

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to configure the settings the Switch will use to communicate with a RADIUS server.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td>`config radius add &lt;server_index 1-3&gt; &lt;server_ip&gt; key &lt;passwd 32&gt; [ default</td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is used to configure the settings the Switch will use to communicate with a RADIUS server.</td>
</tr>
</tbody>
</table>
| **Parameters** | `<server_index 1-3>` – Assigns a number to the current set of RADIUS server settings. Up to three groups of RADIUS server settings can be entered on the Switch.  
`<server_ip>` – The IP address of the RADIUS server.  
`key` – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.  
`<passwd 32>` – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.  
`default` – Uses the default UDP port number in the auth_port, acct_port, timeout and retransmit parameters.  
`auth_port <udp_port_number 1-65535>` – The UDP port number for authentication requests. The default is `1812`.  
`acct_port <udp_port_number 1-65535>` – The UDP port number for accounting requests. The default is `1813`.  
`timeout <int 1-255>` – The time in second for waiting for a server reply. Default value is `5` seconds.  
`retransmit <int 1-255>` – The count for re-transmit. Default value is `2`. |
| **Restrictions** | Only Administrator level users can issue this command. |

**Example usage:**

To configure the RADIUS server communication settings:
DES-3528:5#config radius add 1 10.48.74.121 key dlink default
Command: config radius add 1 10.48.74.121 key dlink default
Success.
DES-3528:5#

**config radius delete**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a previously entered RADIUS server configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config radius delete &lt;server_index 1-3&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete a previously entered RADIUS server configuration.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;server_index 1-3&gt; – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete previously configured RADIUS server communication settings:

DES-3528:5#config radius delete 1
Command: config radius delete 1
Success.
DES-3528:5#

**config radius**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the Switch’s RADIUS settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config radius &lt;server_index 1-3&gt; [ipaddress &lt;server_ip&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the Switch’s RADIUS settings.</td>
</tr>
</tbody>
</table>
| Parameters       | <server_index 1-3> – Assigns a number to the current set of RADIUS server settings. Up to three groups of RADIUS server settings can be entered on the Switch.  
ipaddress <server_ip> – The IP address of the RADIUS server.  
key – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.  
  - <passwd 32> – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.  
auth_port <udp_port_number 1-65535> – The UDP port number for authentication requests. The default is 1812.  
acct_port <udp_port_number 1-65535> – The UDP port number for accounting requests. The default is 1813.  
timeout <int 1-255> – The time in second for waiting for a server reply. Default value is 5 seconds.  
retransmit <int 1-255> – The count for re-transmit. Default value is 2. |
| Restrictions     | Only Administrator level users can issue this command. |
Example usage:

To configure the RADIUS settings:

```
DES-3528:5#config radius 1 ipaddress 10.48.74.121 key dlink_default
Command: config radius 1 ipaddress 10.48.74.121 key dlink_default
Success.
DES-3528:5#
```

### show radius

**Purpose**
Used to display the current RADIUS configurations on the Switch.

**Syntax**
```
show radius
```

**Description**
This command is used to display the current RADIUS configurations on the Switch.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To display RADIUS settings on the Switch:

```
DES-3528:5#show radius
Command: show radius

<table>
<thead>
<tr>

```

### show auth_statistics

**Purpose**
Used to display authenticator statistics information.

**Syntax**
```
show auth_statistics {ports <portlist> | all}
```

**Description**
This command displays authenticator statistics information.

**Parameters**
- `portlist` – Specifies a range of ports to be configured.
- `all` – All ports.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To display authenticator statistics information from port 1:

```
```
DES-3528:5# show auth_statistics ports 1
Command: show auth_statistics ports 1

Port number : 1
EapolFramesRx              0
EapolFramesTx              6
EapolStartFramesRx         0
EapolReqIdFramesTx         6
EapolLogoffFramesRx        0
EapolReqFramesTx           0
EapolRespIdFramesRx        0
EapolRespFramesRx          0
InvalidEapolFramesRx       0
EapLengthErrorFramesRx     0
LastEapolFrameVersion      0
LastEapolFrameSource       00-00-00-00-00-00

show auth_session_statistics

Purpose: Used to display authenticator session statistics information
Syntax: show auth_session_statistics {ports <portlist> | all}
Description: This command displays authenticator session statistics information
Parameters: 
- portlist – Specifies a range of ports to be configured.
- all – All port.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To display authenticator session statistics information from port 1:
show auth_session_statistics ports 1

Port number : 1

SessionOctetsRx                  0
SessionOctetsTx                  0
SessionFramesRx                  0
SessionFramesTx                  0
SessionId
SessionAuthenticMethod     Remote Authentication Server
SessionTime                      0
SessionTerminateCause      SupplicantLogoff
SessionUserName

show auth_client

**Purpose**: Used to display authentication client information

**Syntax**: show auth_client

**Description**: This command displays authentication client information

**Parameters**: None.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

Example usage:

To display authentication client information:
show auth_client

Command: show auth_client

radiusAuthClient =>
radiusAuthClientInvalidServerAddresses 0
radiusAuthClientIdentifier

radiusAuthServerEntry =>
radiusAuthServerIndex :1

radiusAuthServerAddress 0.0.0.0
radiusAuthClientServerPortNumber 0
radiusAuthClientRoundTripTime 0
radiusAuthClientAccessRequests 0
radiusAuthClientAccessRetransmissions 0
radiusAuthClientAccessAccepts 0
radiusAuthClientAccessRejects 0
radiusAuthClientAccessChallenges 0
radiusAuthClientMalformedAccessResponses 0
radiusAuthClientBadAuthenticators 0
radiusAuthClientPendingRequests 0
radiusAuthClientTimeouts 0
radiusAuthClientUnknownTypes 0
radiusAuthClientPacketsDropped 0

show acct_client

Purpose Used to display account client information.
Syntax show acct_client
Description This command displays account client information
Parameters None.
Restrictions Only Administrator and Operator-level users can issue this command.

Example usage:

To display account client information:
config accounting service

Purpose

Used to configure the state of the specified RADIUS accounting service.

Syntax

```
config accounting service [network | shell | system] state [enable | disable]
```

Description

This command is used to enable or disable the specified RADIUS accounting service.

Parameters

- **network** – Accounting service for 802.1X port access control.
  By default, the service is disabled.
- **shell** – Accounting service for shell events:
  When user login or logout the switch (via the console, Telnet, or SSH) and when timeout occurs, accounting information will be collected and sent to RADIUS server.
  By default, the service is disabled.
- **system** – Accounting service for system events: reset, reboot.
  By default, the service is disabled.
- **enable** – Enable the specified accounting service.
- **disable** – Disable the specified accounting service.

Restrictions

Only Administrator level users can issue this command.
Example usage:

To configure the accounting service:

```
DES-3528:5#config accounting service shell state enable
Command: config accounting service shell state enable
Success.
DES-3528:5#
```

### show accounting service

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the RADIUS accounting services' status.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show accounting service</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to show the state for radius accounting service.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To show accounting service:

```
DES-3528:5#show accounting service
Command: show accounting service

Accounting Service
-------------------
Network : Enabled
Shell   : Enabled
System  : Enabled

DES-3528:5#
```
The Switch implements Access Control Lists that enable the Switch to deny network access to specific devices or device groups based on IP settings and MAC address.

Access profiles allows establishment of a criteria to determine whether or not the Switch will forward packets based on the information contained in each packet’s header. These criteria can be specified on a VLAN–by–VLAN basis.

Creating an access profile is divided into two basic parts. First, an access profile must be created using the `create access_profile` command. For example, if you want to deny all traffic to the subnet 10.42.73.0 to 10.42.73.255, you must first create an access profile that instructs the Switch to examine all of the relevant fields of each frame:

```
CREATE ACCESS_PROFILE PROFILE_ID 1 PROFILE_NAME 1 IP SOURCE_IP_MASK 255.255.255.0
```

Here we have created an access profile that will examine the IP field of each frame received by the Switch. Each source IP address the Switch finds will be combined with the `source_ip_mask` with a logical AND operation. The `profile_id` parameter is used to give the access profile an identification number – in this case, 1. The `deny` parameter instructs the Switch to filter any frames that meet the criteria – in this case, when a logical AND operation between an IP address specified in the next step and the `ip_source_mask` match.

The default for an access profile on the Switch is to permit traffic flow. To restrict traffic, users must use the `deny` parameter.

Now that an access profile has been created, you must add the criteria the Switch will use to decide if a given frame should be forwarded or filtered. Here, we want to filter any packets that have an IP source address between 10.42.73.0 and 10.42.73.255:

```
config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1 port 1 deny
```

Here we use the `profile_id 1` which was specified when the access profile was created. The `add` parameter instructs the Switch to add the criteria that follows to the list of rules that are associated with access profile 1. For each rule entered into the access profile, you can assign an `access_id` that both identifies the rule and establishes a priority within the list of rules. A lower `access_id` gives the rule a higher priority. In case of a conflict in the rules entered for an access profile, the rule with the highest priority (lowest `access_id`) will take precedence.

The `ip` parameter instructs the Switch that this new rule will be applied to the IP addresses contained within each frame’s header. `source_ip` tells the Switch that this rule will apply to the source IP addresses in each frame’s header. Finally, the IP address 10.42.73.1 will be combined with the `source_ip_mask 255.255.255.0` to give the IP address 10.42.73.0 for any source IP address between 10.42.73.0 to 10.42.73.255.

Due to a chipset limitation, the Switch supports a maximum of 6 access profiles. The rules used to define the access profiles are limited to a total of 768 rules for the Switch. One rule can support ACL per port or per portmap.

The access profile commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| access_profile              | create access_profile         |

Each command is listed in detail in the following sections.

### create access_profile

**Purpose**
Used to create an access profile on the Switch and to define which parts of each incoming frame’s header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `create access_profile` command below.

**Syntax**
```
create access_profile [ethernet( vlan | source_mac <macmask 000000000000-ffffffffffff>) | destination_mac <macmask 000000000000-ffffffffffff>) | 802.1p | ethernet_type](1)|ip ( vlan| source_ip_mask <netmask> | destination_ip_mask <netmask>) | [icm | icmp | code | type | igmp | type | tcp | src_port_mask <hex
0x0-0xffff> | dst_port_mask <hex 0x0-0xffff> | flag_mask | all | [urg | ack | psh | rst | syn | fin | fin(1)] | udp | src_port_mask <hex 0x0-0xffff> | dst_port_mask <hex 0x0-0xffff> | [protocol_id_mask <hex 0x0-0xff> | [user_define_mask <hex 0x0-0xffffffff>] )](1) | [offset_chunk_1 <value 0-31> | offset_chunk_2 <value 0-31> | offset_chunk_3 <value 0-31> | offset_chunk_4 <value 0-31> | source_ipv6_mask <ipv6mask> | destination_ipv6_mask <ipv6mask> | ](1)) profile_id <value 1-14> profile_name <name 1-32>
```

**Description**
This command is used to create an access profile on the Switch and to define which parts of each incoming frame’s header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `create access_profile` command, below.

**Parameters**
- `ethernet` – Specifies that the Switch will examine the layer 2 part of each packet header.
  - `vlan` – Specifies that the Switch will examine the VLAN part of each packet header.
  - `source_mac <macmask 000000000000-ffffffffffff>` – Specifies a MAC address mask for the source MAC address. This mask is entered in a hexadecimal format.
  - `destination_mac <macmask 000000000000-ffffffffffff>` – Specifies a MAC address mask for the destination MAC address.
  - `802.1p` – Specifies that the Switch will examine the 802.1p priority value in the frame’s header.
  - `ethernet_type` – Specifies that the Switch will examine the Ethernet type value in each frame’s header.
**create access_profile**

`ip` – Specifies that the Switch will examine the IP address in each frame’s header.

`vlan` – Specifies a VLAN mask.

`sourcε_ip_mask <netmask>` – Specifies an IP address mask for the source IP address.

`destination_ip_mask <netmask>` – Specifies an IP address mask for the destination IP address.

`dscp` – Specifies that the Switch will examine the DiffServ Code Point (DSCP) field in each frame’s header.

`icmp` – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field in each frame’s header.

- `type` – Specifies that the Switch will examine each frame’s ICMP Type field.
- `code` – Specifies that the Switch will examine each frame’s ICMP Code field.

`igmp` – Specifies that the Switch will examine each frame’s Internet Group Management Protocol (IGMP) field.

`type` – Specifies that the Switch will examine each frame’s IGMP Type field.

`tcp – `Specifies that the Switch will examine each frame’s Transmission Control Protocol (TCP) field.

`sourcε_port_mask <hex 0x0-0xffffffff>` – Specifies a TCP port mask for the source port.

`destinatιon_port_mask <hex 0x0-0xffffffff>` – Specifies a TCP port mask for the destination port.

`flag_mask` – Enter the appropriate flag_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between `all, urg (urgent), ack (acknowledgement), psh (push), rst (reset), syn (synchronize) and fin (finish).`

`udp` – Specifies that the Switch will examine each frame’s User Datagram Protocol (UDP) field.

`sourcε_port_mask <hex 0x0-0xffffffff>` – Specifies a UDP port mask for the source port.

`destinatιon_port_mask <hex 0x0-0xffffffff>` – Specifies a UDP port mask for the destination port.

`protocol_id <value 0-255>` – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.

`user_define_mask <hex 0x0-0xffffffff>` – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.

`packet_content_mask` – Allows users to examine up to 4 specified offset_chunk within a packet at one time and specifies that the Switch will mask the packet header beginning with the offset value specified as follows:

```
packet_content_mask {offset_chunk_1 <value 0-31> <hex 0x0-0xffffffff> | offset_chunk_2 <value 0-31> <hex 0x0-0xffffffff> | offset_chunk_3 <value 0-31> <hex 0x0-0xffffffff> | offset_chunk_4 <value 0-31> <hex 0x0-0xffffffff> }
```

With this advanced unique Packet Content Mask (also known as Packet Content Access Control List - ACL), D-Link xStack switch family can effectively mitigate some network attacks like the common ARP Spoofing attack that is widespread today. This is the reason why Packet Content ACL is able to inspect any specified content of a packet in different protocol layers.

`profile_id <value 1-14>` – Sets the relative priority for the profile. Priority is set relative to other profiles where the lowest profile ID has the highest priority. The user may enter a profile ID number between 1-14, yet, remember only 14 access profiles can be created on the Switch.

`profile_name` – Specifies the name of the profile. The maximum length is 32 characters.

`IPV6` – Denotes that IPv6 packets will be examined by the Switch for forwarding or filtering based on the rules configured in the `config access_profile` command for IPv6.

- `class` – Entering this parameter will instruct the Switch to examine the `class` field of the
create access_profile

IPv6 header. This class field is a part of the packet header that is similar to the Type of Service (ToS) or Precedence bits field in IPv4.

- **flowlabel** – Entering this parameter will instruct the Switch to examine the *flow label* field of the IPv6 header. This flow label field is used by a source to label sequences of packets such as non-default quality of service or real time service packets.
- **tcp** – Specifies that the Switch will examine each frame’s Transmission Control Protocol (TCP) field.
- **src_port_mask** <hex 0x0-0xffff> – Specifies a TCP port mask for the source port.
- **dst_port_mask** <hex 0x0-0xffff> – Specifies a TCP port mask for the destination port.
- **udp** – Specifies that the Switch will examine each frame’s User Datagram Protocol (UDP) field.
- **source_ipv6_mask** <ipv6mask> – Specifies an IP address mask for the source IPv6 address.
- **destination_ipv6_mask** <ipv6mask> – Specifies an IP address mask for the destination IPv6 address.

Restrictions

Only Administrator and Operator-level users can issue this command.

Example usage:

To create an access list rules:

```
DES-3528:5# create access_profile profile_id 5 profile_name 5 ethernet vlan source_mac 00-00-00-00-00-01 destination_mac 00-00-00-00-00-02 802.1p ethernet_type 802.1p
Command: create access_profile profile_id 5 profile_name 5 ethernet vlan source_mac 00-00-00-00-00-01 destination_mac 00-00-00-00-00-02 802.1p ethernet_type 802.1p
Success.
DES-3528:5#
```

delete access_profile

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a previously created access profile.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>delete access_profile [profile_id &lt;value 1-14&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete a previously created access profile on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>profile_id &lt;value 1-14&gt; – Enter an integer between 1 and 14 that is used to identify the access profile that will be deleted with this command. This value is assigned to the access profile when it is created with the create access_profile command. The user may enter a profile ID number between 1 and 14, yet, remember only 14 access profiles can be created on the Switch.</td>
</tr>
<tr>
<td></td>
<td>profile_name – Specifies the name of the profile. The maximum length is 32 characters.</td>
</tr>
<tr>
<td></td>
<td>all – Entering this parameter will delete all access profiles currently configured on the Switch.</td>

<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete the access profile with a profile ID of 1:
DES-3528:5#delete access_profile profile_id 1
Command: delete access_profile profile_id 1
Success.

DES-3528:5#
config access_profile

Purpose
Used to configure an access profile on the Switch and to define specific values that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the create access_profile command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the config access_profile command, below.

Syntax
config access_profile [profile_id <value 1-14> | profile_name <name 1-32>] [ add access_id [ auto_assign | <value 1-128> ] [ ethernet { [vlan <vlan_name 32> | vlan_id <value 1-4094>] | source_mac <macaddr 000000000000-ffffffffffff> | destination_mac <macaddr 000000000000-ffffffffffff> } 802.1p <value 0-7> | ethernet_type <hex 0x0-0xffff> ] [ ip{ [vlan <vlan_name 32> | vlan_id <value 1-4094>] | source_ip <ipaddr> | destination_ip <ipaddr> | 802.1p <value 0-7> } [ dscp <value 0-63> | [icmp { type <value 0-255> | code <value 0-255> } | igmp { type <value 0-255> } | tcp { src_port <value 0-65535> | dst_port <value 0-65535> | urg | ack | psh | rst | syn | fin } | udp { src_port <value 0-65535> | dst_port <value 0-65535> } | protocol_id <value 0-255> { user_define <hex 0x0-0xffffffff> } ] [ port { [portlist] | all } [ vlan_based { vlan_name <vlan_name> | vlan_id <value 1-4094> } ] [ permit { priority <value 0-7> {replace_priority} | rx_rate [no_limit | <value 1-15624>] | [replace_dscp_with <value 0-63> | replace_tos_precedence_with <value 0-7> ] | counter[enable | disable] | mirror | deny ] [ time_range <range_name 32> ] | delete access_id <value 1-128> ]

Description
This command is used to configure an access profile on the Switch and to enter specific values that will be combined, using a logical AND operational method, with masks entered with the create access_profile command, above.

Parameters
profile_id <value 1-14> – Enter an integer used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the create access_profile command. The profile ID sets the relative priority for the profile and specifies an index number that will identify the access profile being created with this command. Priority is set relative to other profiles where the lowest profile ID has the highest priority. The user may enter a profile ID number between 1 and 14, yet, remember only 14 access profiles can be created on the Switch.

profile_name – Specifies the name of the profile. The maximum length is 32 characters.
add access_id <value 1-128> – Adds an additional rule to the above specified access profile. The value is used to index the rule created. For information on number of rules that can be created for a given port, lease see the introduction to this chapter.
ethernet – Specifies that the Switch will look only into the layer 2 part of each packet.
vlan <vlan_name 32> – Specifies that the access profile will only apply to this VLAN.
vlan_id <value 1-4094> - Specifies that the access profile will only apply to this VLAN ID.
source_mac <macaddr 000000000000-ffffffffffff> – Specifies that the access profile will apply only to packets with this source MAC address.
destination_mac <macaddr 000000000000-ffffffffffff> – Specifies that the access profile will apply only to packets with this destination MAC address.
802.1p <value 0-7> – Specifies that the access profile will apply only to packets with this 802.1p priority value.
ethernet_type <hex 0x0-0xffff> – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.
config access_profile

ip – Specifies that the Switch will look into the IP fields in each packet.

vlan <vlan_name 32> – Specifies that the access profile will only apply to this VLAN.

source_ip <ipaddr> – Specifies that the access profile will apply to only packets with this source IP address.

destination_ip <ipaddr> – Specifies that the access profile will apply to only packets with this destination IP address.

dscp <value 0-63> – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header.

icmp – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.

type <value 0-255> – Specifies that the access profile will apply to this ICMP type value.

code <value 0-255> – Specifies that the access profile will apply to this ICMP code value.

igmp – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.

type <value 0-255> – Specifies that the access profile will apply to packets that have this IGMP type value.

tcp – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.

src_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.

dst_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.

udp – Specifies that the Switch will examine the User Datagram Protocol (UDP) field in each packet.

src_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP source port in their header.

dst_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.

protocol_id <value 0-255> – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.

user_define <hex 0x0-0xffffffff> – Specifies a mask to be combined with the value found in the frame header and if this field contains the value entered here, apply the following rules.

packet_content_mask – Allows users to examine any up to four specified offset_chunk within a packet at one time and specifies that the Switch will mask the packet header beginning with the offset value specified as follows:

packet_content { offset_chunk_1 <hex 0x0-0xffffffff> | offset_chunk_2 <hex 0x0-0xffffffff> | offset_chunk_3 <hex 0x0-0xffffffff> | offset_chunk_4 <hex 0x0-0xffffffff>}

With this advanced unique Packet Content Mask (also known as Packet Content Access Control List - ACL), D-Link xStack switch family can effectively mitigate some network attacks like the common ARP Spoofing attack that is wide spread today. This is the reason that Packet Content ACL is able to inspect any specified content of a packet in different protocol layers.

IPV6 - Denotes that IPv6 packets will be examined by the Switch for forwarding or filtering based on the rules configured in the config access_profile command for IPv6.

• class – Entering this parameter will instruct the Switch to examine the class field of the IPv6 header. This class field is a part of the packet header that is similar to the Type of Service (ToS) or Precedence bits field in IPv4.

• flowlabel – Entering this parameter will instruct the Switch to examine the flow label field of the IPv6 header. This flow label field is used by a source to
**config access_profile**

- **tcp** – Specifies that the Switch will examine each frame’s Transmission Control Protocol (TCP) field.
- **src_port_mask <hex 0x0-0xffff>** – Specifies a TCP port mask for the source port.
- **dst_port_mask <hex 0x0-0xffff>** – Specifies a TCP port mask for the destination port.
- **udp** – Specifies that the Switch will examine each frame’s User Datagram Protocol (UDP) field.
- **src_port_mask <hex 0x0-0xffff>** – Specifies a TCP port mask for the source port.
- **dst_port_mask <hex 0x0-0xffff>** – Specifies a TCP port mask for the destination port.
- **source_ipv6_mask <ipv6mask>** – Specifies an IP address mask for the source IPv6 address.
- **destination_ipv6_mask <ipv6mask>** – Specifies an IP address mask for the destination IPv6 address.
- **port <portlist>** – Specifies the port number on the Switch to permit, deny or mirror access for the rule.
- **permit** – Specifies the rule permit access for incoming packets on the previously specified port.
- **priority <value 0-7>** – Specifies that the access profile will apply to packets that contain this value in their 802.1p priority field of their header for incoming packets on the previously specified port.
- **{replace_priority}** – Allows users to specify a new value to be written to the priority field of an incoming packet on the previously specified port.
- **replace_dscp_with <value 0-63>** – Allows users to specify a new value to be written to the DSCP field of an incoming packet on the previously specified port.
- **replace_tos_precedence_with <value 0-7>** – Specifies the packets that match the access profile and that tos-precedence values will be changed by the switch.
- **rx_rate** – Specifies that one of the parameters below (no_limit or <value 1-15624>) will be applied to the rate at which the above specified ports will be allowed to receive packets
  - **no_limit** – Specifies that there will be no limit on the rate of packets received by the above specified ports.
  - **<value 1-15624>** – Specifies the packet limit, in 64Kbps, that the above ports will be allowed to receive.
- **deny** – Specifies the rule will deny access for incoming packets on the previously specified port.
- **mirror** – Specifies the packets that match the access profile, copies it and sends the copied one to the mirror port.
- **time_range** – Specifies the time_range profile that has been associated with the ACL entries.
- **delete access_id <value 1-128>** – Use this to remove a previously created access rule of a profile ID. For information on number of rules that can be created for a given port, please see the introduction to this chapter.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the access profile with the profile ID of 1 to filter frames on port 7 that have IP addresses in the range between 10.42.73.0 to 10.42.73.255:

```
DES-3528:5#config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1
port 7 deny
Command: config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1
port 7 deny
```
NOTE: Address Resolution Protocol (ARP) is the standard for finding a host's hardware address (MAC Address). However, ARP is vulnerable as it can be easily spoofed and utilized to attack a LAN (known as ARP spoofing attack). For a more detailed explanation on how ARP protocol works and how to employ D-Link's advanced unique Packet Content ACL to prevent an ARP spoofing attack, please see Appendix B, at the end of this manual.

### show access_profile

**Purpose**
Used to display the currently configured access profiles on the Switch.

**Syntax**

```
show access_profile {profile_id <value 1-14> | profile_name <name 1-32 >}
```

**Description**
This command is used to display the currently configured access profiles.

**Parameters**

- **profile_id <value 1-14>** – Specify the profile id to display only the access rules configuration for a single profile ID. The user may enter a profile ID number between 1 and 14, yet, remember only 14 access profiles can be created on the Switch.
- **profile_name <name 1-32 >** – Specifies the name of the profile. The maximum length is 32 characters.

**Restrictions**
None.

**Example usage:**

To display all of the currently configured access profiles on the Switch:

```
DES-3528:5#show access_profile
```

**Command:** show access_profile

**Access Profile Table**

<table>

### create cpu access_profile

**Purpose**
Used to create an access profile specifically for CPU Interface Filtering on the Switch and to define which parts of each incoming frame’s header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `create cpu access_profile`
create cpu access_profile command, below.

Syntax

create cpu access_profile profile_id <value 1-5> [ethernet {vlan | source_mac <macmask 000000000000-ffffffffffff> | destination_mac <macmask 000000000000-ffffffffffff> } | 802.1p | ethernet_type}{1} | ip {vlan | source_ip_mask <netmask> | destination_ip_mask <netmask>} | dscp | [icmp {type | code} | igmp {type}] | tcp {src_port_mask <hex 0x0-0xffff> | dst_port_mask <hex 0x0-0xffff> | flag_mask {all | {urg | ack | psh | rst | syn | fin}){1}} | udp {src_port_mask <hex 0x0-0xffff> | dst_port_mask <hex 0x0-0xffff> | [user_define_mask <hex 0x0-0xffffffff>] | packet_content_mask {offset 0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset 16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset 32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>} | {offset 48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>} | offset 64-79 <hex 0x0-0xffffffff> | offset 80-127 <hex 0x0-0xffffffff>} | ipv6 { class | flowlabel | source_ipv6_mask <ipv6mask> | destination_ipv6_mask <ipv6mask>} ){1}]

Description

This command is used to create an access profile used only for CPU Interface Filtering. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the create cpu access_profile command, below.

Parameters

ethernet – Specifies that the Switch will examine the layer 2 part of each packet header.

• vlan – Specifies that the Switch will examine the VLAN part of each packet header.
• source_mac <macmask 000000000000-ffffffffffff> – Specifies to examine the source MAC address mask.
• destination_mac <macmask 000000000000-ffffffffffff> – Specifies to examine the destination MAC address mask.
• 802.1p – Specifies that the Switch will examine the 802.1p priority value in the frame’s header.
• ethernet_type – Specifies that the Switch will examine the Ethernet type value in each frame’s header.

ip – Specifies that the switch will examine the IP address in each frame’s header.

• vlan – Specifies a VLAN mask.
• source_ip_mask <netmask> – Specifies an IP address mask for the source IP address.
• destination_ip_mask <netmask> – Specifies an IP address mask for the destination IP address.

• dscp – Specifies that the Switch will examine the DiffServ Code Point (DSCP) field in each frame’s header.
• icmp – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field in each frame’s header.
  • type – Specifies that the Switch will examine each frame’s ICMP Type field.
  • code – Specifies that the Switch will examine each frame’s ICMP Code field.
• igmp – Specifies that the Switch will examine each frame’s Internet Group Management Protocol (IGMP) field.
  • type – Specifies that the Switch will examine each frame’s IGMP Type field.
• tcp – Specifies that the Switch will examine each frame’s Transmission Control Protocol (TCP) field.
  • src_port_mask <hex 0x0-0xffff> – Specifies a TCP port mask for the source port.
  • dst_port_mask <hex 0x0-0xffff> – Specifies a TCP port mask for the destination port.
• flag_mask {all | {urg | ack | psh | rst | syn | fin})} – Enter the appropriate flag_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between all, urg (urgent), ack (acknowledgement), psh (push), rst (reset), syn (synchronize) and fin (finish).
• udp – Specifies that the switch will examine each frame’s User Datagram Protocol
create cpu access_profile

**Parameters**

- **src_port_mask <hex 0x0-0xffff>** – Specifies a UDP port mask for the source port.
- **dst_port_mask <hex 0x0-0xffff>** – Specifies a UDP port mask for the destination port.
- **protocol_id_mask <hex 0x0-0xffffffff>** – Specifies that the Switch will examine each frame’s Protocol ID field using the hex form entered here.
- **user_define_mask <hex 0x0-0xffffffff>** – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.
- **packet_content_mask** – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:
  - **offset_0-15** – Enter a value in hex form to mask the packet from byte 0 to byte 15.
  - **offset_16-31** – Enter a value in hex form to mask the packet from byte 16 to byte 31.
  - **offset_32-47** – Enter a value in hex form to mask the packet from byte 32 to byte 47.
  - **offset_48-63** – Enter a value in hex form to mask the packet from byte 48 to byte 63.
  - **offset_64-79** – Enter a value in hex form to mask the packet from byte 64 to byte 79.

**IPV6** – Denotes that IPv6 packets will be examined by the Switch for forwarding or filtering based on the rules configured in the `config access_profile` command for IPv6.

- **class** – Entering this parameter will instruct the Switch to examine the class field of the IPv6 header. This class field is a part of the packet header that is similar to the Type of Service (ToS) or Precedence bits field in IPv4.
- **flowlabel** – Entering this parameter will instruct the Switch to examine the flow label field of the IPv6 header. This flow label field is used by a source to label sequences of packets such as non-default quality of service or real time service packets.
- **source_ipv6_mask <ipv6mask>** – Specifies an IP address mask for the source IPv6 address.
- **destination_ipv6_mask <ipv6mask>** – Specifies an IP address mask for the destination IPv6 address.
- **profile_id <value 1-5>** – Enter an integer between 1 and 5 that is used to identify the CPU access profile to be created with this command.

**Restrictions**

- Only Administrator and Operator-level users can issue this command.

**Example usage:**

To create a CPU access profile:

```
DES-3528:5# create cpu access_profile profile_id 1 ip vlan source_ip_mask 20.0.0.0 destination_ip_mask 10.0.0.0 dscp icmp type code
```

Command: create cpu access_profile profile_id 1 ip vlan source_ip_mask 20.0.0.0 destination_ip_mask 10.0.0.0 dscp icmp type code

Success.

DES-3528:5#

delete cpu access_profile

**Purpose**

Used to delete a previously created CPU access profile.

**Syntax**

delete cpu access_profile [profile_id <value 1-5 | all]

**Description**

This command is used to delete a previously created CPU access profile.

**Parameters**

- **profile_id <value 1-5>** – Enter an integer between 1 and 5 that is used to identify the CPU access profile to be deleted with this command. This value is assigned to the access profile when it is created with the `create cpu access_profile` command.
- **all** – This will delete all previously configured cpu access_profiles.

**Restrictions**

- Only Administrator and Operator-level users can issue this command.
Example usage:
To delete the CPU access profile with a profile ID of 1:

```
DES-3528:5#delete cpu access_profile profile_id 1
Command: delete cpu access_profile profile_id 1
Success.
DES-3528:5#
```

```
config cpu access_profile
Purpose
Used to configure a CPU access profile used for CPU Interface Filtering and to define specific values that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the `create cpu access_profile` command will be combined, using a logical and operational method, with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `config cpu access_profile` command, below.

Syntax
```
config cpu access_profile profile_id <value 1-5>[ add access_id <value 1-100>[ ethernet {[vlan <vlan_name 32> | vlan_id <value 1-4094>]} | source_mac <macaddr 000000000000-ffffffffffff> | destination_mac <macaddr 000000000000-ffffffffffff> | 802.1p <value 0-7> | ethernet_type <hex 0x0-0xffff>](1) | ip{[vlan <vlan_name 32> | vlan_id <value 1-4094>]} | source_ip <ipaddr> | destination_ip <ipaddr> | dscp <value 0-63> | [icmp {type <value 0-255> | code <value 0-255>} | igmp {type <value 0-255>}] | tcp {src_port <value 0-65535> | dst_port <value 0-65535> | urg | ack | psh | rst | syn | fin} | udp {src_port <value 0-65535> | dst_port <value 0-65535>} | protocol_id <value 0-255> {user_define <hex 0x0-0xffffffff>}]| packet_content {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_80-95 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_96-111 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_112-127 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_128-143 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_144-159 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_160-175 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_176-191 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_192-207 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_208-223 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_224-239 | offset_240-255 | ipv6 {[ class <value 0-255> | flowlabel <hex 0x0-0xffff> | source_ipv6 <ipv6addr> | destination_ipv6 <ipv6addr>]| packet_content | offset_0-15 | offset_16-31 | offset_32-47 | offset_48-63 | offset_64-79 | offset_80-95 | offset_96-111 | offset_112-127 | offset_128-143 | offset_144-159 | offset_160-175 | offset_176-191 | offset_192-207 | offset_208-223 | offset_224-239 | offset_240-255]} | port [portlist] | all ][ permit | deny] [time_range <range_name 32>] | delete access_id <value 1-100> ]}
```

Description
This command is used to configure a CPU access profile for CPU Interface Filtering and to enter specific values that will be combined, using a logical AND operational method, with masks entered with the `config cpu access_profile` command, above.

Parameters
- `profile_id <value 1-5>` – Enter an integer used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the `create cpu access_profile` command. The profile ID sets the relative priority for the profile and specifies an index number that will identify the access profile being created with this command. Priority is set relative to other profiles where the lowest profile ID has the highest priority.

- `add access_id <value 1-100>` – Adds an additional rule to the above specified access profile. The value is used to index the rule created.

- `ethernet` – Specifies that the Switch will look only into the layer 2 part of each packet.

- `vlan <vlan_name 32>` – Specifies that the access profile will only apply to this VLAN.

- `vlan_id <value 1-4094>` – Specifies that the access profile will only apply to this VLAN ID.

- `source_mac <macaddr 000000000000-ffffffffffff>` – Specifies that the access profile will apply to this source MAC address.

- `destination_mac <macaddr 000000000000-ffffffffffff>` – Specifies that the access profile will apply to this destination MAC address.

- `802.1p <value 0-7>` – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.

- `ethernet_type <hex 0x0-0xffff>` – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.

- `ip` – Specifies that the Switch will look into the IP fields in each packet.
config cpu access_profile

Parameters

- **vlan <vlan_name 32>** – Specifies that the access profile will only apply to this VLAN.
- **vlan_id <value 1-4094>** - Specifies that the access profile will only apply to this VLAN ID.
- **source_ip <ipaddr>** – Specifies that the access profile will apply to only packets with this source IP address.
- **destination_ip <ipaddr>** – Specifies that the access profile will apply to only packets with this destination IP address.
- **dscp <value 0-63>** – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header.
- **icmp** – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.
  - **type <value 0-255>** – Specifies that the access profile will apply to this ICMP type value.
  - **code <value 0-255>** – Specifies that the access profile will apply to this ICMP code value.
- **igmp** – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.
  - **type <value 0-255>** – Specifies that the access profile will apply to packets that have this IGMP type value.
- **tcp** – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.
  - **src_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.
  - **dst_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.
  - **urg | ack | psh | rst | syn | fin** – Enter the appropriate flag mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between urg (urgent), ack (acknowledgement), psh (push), rst (reset), syn (synchronize) and fin (finish).
- **protocol_id <value 0-255>** – Specifies that the Switch will examine the Protocol field in each packet and if this field contains the value entered here, apply the following rules.
- **udp** – Specifies that the Switch will examine the User Datagram Protocol (UDP) field within each packet.
  - **src_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this UDP source port in their header.
  - **dst_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.
- **protocol_id <value 0-255>** – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.
  - **user_define_mask <hex 0x0-0xffffffff>** – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.
- **packet_content_mask** – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:
  - **offset_0-15** – Enter a value in hex form to mask the packet from byte 0 to byte 15.
  - **offset_16-31** – Enter a value in hex form to mask the packet from byte 16 to byte 31.
  - **offset_32-47** – Enter a value in hex form to mask the packet from byte 32 to byte 47.
  - **offset_48-63** – Enter a value in hex form to mask the packet from byte 48 to byte 63.
  - **offset_64-79** – Enter a value in hex form to mask the packet from byte 64 to
### config cpu access_profile

**config cpu access_profile**

- **byte 79.**
  - **IPV6** – Denotes that IPv6 packets will be examined by the Switch for forwarding or filtering based on the rules configured in the `config access_profile` command for IPv6.
  - **class** – Entering this parameter will instruct the Switch to examine the **class** field of the IPv6 header. This class field is a part of the packet header that is similar to the Type of Service (ToS) or Precedence bits field in IPv4.
  - **flowlabel** – Entering this parameter will instruct the Switch to examine the **flow label** field of the IPv6 header. This flow label field is used by a source to label sequences of packets such as non-default quality of service or real time service packets.
  - **source_ipv6_mask <ipv6mask>** – Specifies an IP address mask for the source IPv6 address.
  - **destination_ipv6_mask <ipv6mask>** – Specifies an IP address mask for the destination IPv6 address.
  - **permit | deny** – Specifies that the packets forwarded to the CPU will either be permitted or denied based on the criteria defined in the CPU access profile.
  - **time_range** – Specifies the time range profile that has been associated with the ACL entries.

**Restrictions**

- Only Administrator and Operator-level users can issue this command.

---

**Example usage:**

To configure CPU access list entry:

```
DES-3528:5#config cpu access_profile profile_id 5 add access_id 1 ip vlan default
source_ip 20.2.2.3 destination_ip 10.1.1.252 dscp 3 icmp type 11 code 32 port 1 deny
```

```
Command: config cpu access_profile profile_id 10 add access_id 1 ip vlan default
source_ip 20.2.2.3 destination_ip 10.1.1.252 dscp 3 icmp type 11 code 32 port 1 deny

Success.

DES-3528:5#
```

### show cpu access_profile

**Purpose**

- Used to view the CPU access profile entry currently set in the Switch.

**Syntax**

- `show cpu access_profile {profile_id <value 1-5>}`

**Description**

- This command is used view the current CPU interface filtering entries set on the Switch.

**Parameters**

- **profile_id <value 1-5>** – Enter an integer between 1 and 5 that is used to identify the CPU access profile to be deleted with this command. This value is assigned to the access profile when it is created with the `create cpu access_profile` command.

**Restrictions**

- None.

---

**Example usage:**

To show the CPU filtering state on the Switch:

```
DES-3528:5#show cpu access_profile
Command: show cpu access_profile
CPU Interface Filtering State: Disabled

CPU Interface Access Profile Table

Total Unused Rule Entries: 499
Total Used Rule Entries : 1
```
### enable cpu_interface_filtering

**Purpose**
Used to enable CPU interface filtering on the Switch.

**Syntax**
```plaintext
enable cpu_interface_filtering
```

**Description**
This command is used, in conjunction with the `disable cpu_interface_filtering` command below, to enable and disable CPU interface filtering on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example Usage:**

To enable CPU interface filtering:

```plaintext
DES-3528:5#enable cpu_interface_filtering
Command: enable cpu_interface_filtering
Success.
DES-3528:5#
```

### disable cpu_interface_filtering

**Purpose**
Used to disable CPU interface filtering on the Switch.

**Syntax**
```plaintext
disable cpu_interface_filtering
```

**Description**
This command is used, in conjunction with the `enable cpu_interface_filtering` command above, to enable and disable CPU interface filtering on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example Usage:**

To disable CPU filtering:

```plaintext
DES-3528:5#disable cpu_interface_filtering
Command: disable cpu_interface_filtering
Success.
DES-3528:5#
```

### config flow_meter

**Purpose**
Used to configure packet flow-based metering based on an access profile and rule.
config flow_meter

Syntax
config flow_meter [profile_id <value 1-14> | profile_name <name 1-32>] access_id
value 1-128] [[tr_tcm cir <value 0-15624> [cbs <value 0-16384>]
pir <value 0-15624> [pbs <value 0-16384>]] | sr_tcm cir <value 0-15624>
cbs <value 0-16384> ebs <value 0-16384>] [conform permit {replace_dscp
<value 0-63>} {counter [enable | disable]}
]{exceed [permit {replace_dscp
<value 0-63>} {counter [enable | disable]} | drop]
violate [permit {replace_dscp
<value 0-63>} {counter [enable | disable]} | drop]
delete ]

Description
This command is used to configure the flow-based metering function. The metering function
supports three modes, single rate two color, single rate three color, and two rate three color.
The access rule must be created before the parameters in this command is configured.
For the single rate two color mode, users may set the preferred bandwidth for this rule, in
Kbps and once the bandwidth has been exceeded, overflow packets will be either dropped or
set to a drop precedence, depending on the configuration. The drop precedence will be used
by RED. With RED, the packet with higher drop precedence will be dropped with higher
probability.
For the single rate three color mode, users need to specify the committed rate in Kbps, the
committed burst size and the excess burst size.
For the two rate three color mode, users need to specify the committed rate in Kbps, the
committed burst size, the peak rate and the peak burst size.
The green color packet will be treated as the conforming action, the yellow color packet will
be treated as the exceeding action, and the red color packet will be treated as the violating
action.

Parameters
profile_id <value 1-14> – Enter an integer used to identify the access profile that will be
configured with this command. This value is assigned to the access profile when it is created
with the create access_profile command. The profile ID sets the relative priority for the
profile and specifies an index number that will identify the access profile being created with
this command. Priority is set relative to other profiles where the lowest profile ID has the
highest priority. The user may enter a profile ID number between 1 and 14.

profile_name <name 1-32> – Specifies the name of the profile. The maximum length is 32
characters.

access_id <value 1-128> – Adds an additional rule to the above specified access profile. The
value is used to index the rule created. For information on number of rules that can be
created for a given port, lease see the introduction to this chapter.

replace_dscp: mark the packet with a specified DSCP. Different DSCP may have different
probability to be dropped in the later stage.

tr_tcm – Specifies the “two rate three color mode”
cir <value 0-15624> – Specify the “committed information rate”
The unit is 64Kbps. That is to say, 1 means 64Kbps.
cbs <value 0-16384> – Specify the “committed burst size”
1. The unit is Kbyte. That is to say, 1 means 1Kbyte.
2. This parameter is an optional parameter. The default value is 4*1024.
3. The max set value is 16*1024.
pir <value 0-15624> – Specify the “peak information rate”
The unit is 64Kbps. That is to say, 1 means 64Kbps.
pbs <value 0-16384> – Specify the “peak burst size”
1. The unit is Kbyte. That is to say, 1 means 1Kbyte.
2. This parameter is an optional parameter. The default value is 4*1024
3. The max set value is 16*1024.

sr_tcm – Specifies the “single rate three color mode”
cir <value 0-15624> – Specify the “committed information rate”
The unit is 64Kbps. That is to say, 1 means 64Kbps.
cbs <value 0-16384> – Specify the “committed burst size”
1. The unit is Kbyte. That is to say, 1 means 1Kbyte.
2. The max set value is 16*1024.
**config flow_meter**

- **ebs <value 0-16384>** – Specify the “excess burst size”
  1. The unit is Kbyte. That is to say, 1 means 1 Kbyte.
  2. The max set value is 16*1024.

  **conform** - Specifies the action when packet is in “green color”
  - **permit** – Permit the packet.
  - **replace_dscp** – Change the dscp of the packet.
  - **counter** – Specify the counter. This is optional. The default is “disable”.

  **exceed** – Specifies the action when packet is in “yellow color”
  - **permit** – Permit the packet.
  - **replace_dscp** – Change the dscp of packet
  - **drop** – Drop the packet.
  - **counter** – Specify the counter. This is optional. The default is “disable”.

  **violate** – Specifies the action when packet is in “red color”
  - **permit** – Permit the packet.
  - **replace_dscp** – Change the dscp of packet.

- **counter** – Specifies the counter. This is optional. The default is “disable”.
  - **drop** – Drop the packet.
  - The resource may be limited such that counter cannot be turned on. The counter will be cleared when the function is disabled.
  - **delete** – Delete the specified flow_meter.

**Restrictions**

- Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the ACL flow meter on the Switch:

```
DES-3528:5# config flow_meter profile_id 1 access_id 1 tr_tcm cir 1000 cbs 200 pir 2000 pbs 2000 exceed permit replace_dscp 21 violate drop
Command: config flow_meter profile_id 1 access_id 1 tr_tcm cir 1000 cbs 200 pir 2000 pbs 2000 exceed permit replace_dscp 21 violate drop
Success.
DES-3528:5#
```

**show flow_meter**

- **Purpose**
  Used to view the current state of ACL flow meter on the Switch.

- **Syntax**
  `show flow_meter {{profile_id <value 1-14> | profile_name <name 1-32>}} {access_id <value1-128>}}`

- **Description**
  This command is used view the current state of ACL flow meter on the Switch.

- **Parameters**
  - **profile_id <value 1-14>** – Specifies the profile ID.
  - **profile_name <name 1-32>** – Specifies the name of the profile. The maximum length is 32 characters.
  - **access_id <value1-128>** – Specifies the access ID.

- **Restrictions**
  None.

Example usage:

To show the ACL flow meter state on the Switch:

```
DES-3528:5# show flow_meter profile_id 1
success.
DES-3528:5#
```
DES-3528:5#show flow_meter

config time_range

Purpose        Used to configure the range of time to activate a function on the switch.
Syntax         config time_range <range_name 32> [ hours start_time < time hh:mm:ss > end_time<
              time hh:mm:ss >  weekdays <daylist> | delete]
Description     This command defines a specific range of time to activate a function on the Switch by
                specifying which time range in a day and which days in a week are covered in the time
                range. Note that the specified time range is based on SNTP time or configured time. If this
                time is not available, then the time range will not be met.
Parameters      range_name – Specifies the name of the time range settings.
                start_time – Specifies the starting time in a day. (24-hr time)
                For example, 19:00 means 7PM. 19 is also acceptable. start_time must be smaller than
                end_time.
                end_time – Specifies the ending time in a day. (24-hr time)
                weekdays – Specifying the list of days contained in the time range. Use a dash to define a
                period of days. Use a comma to separate specific days.
                For example, mon-fri (Monday to Friday)
                sun, mon, fri (Sunday, Monday and Friday)
                delete – Deletes a time range profile. When a time_range profile has been associated with
                ACL entries, the delete of this time_range profile will fail.
Restrictions   Only Administrator and Operator-level users can issue this command.

Example usage:
To config time range:
show time_range

**Purpose**
Used to display current access list table.

**Syntax**
show time_range

**Description**
This command displays current time range setting.

**Parameters**
None.

**Restrictions**
None.

**Example usage:**
To show the time range on the Switch:

DES-3528:5#show time_range
Command: show time_range

Time Range Information
-----------------------
Range Name : 1-3_new
Weekdays   : Mon,Tue,Wed,Thu,Fri
Start Time : 11:21:20
End Time   : 11:44:40
Total Entries : 1

DES-3528:5#

show current_config access_profile

**Purpose**
Used to display the ACL part of current configuration.

**Syntax**
show current_config access_profile

**Description**
This command displays the ACL privilege of the current configuration in user level of privilege.
The overall current configuration can be displayed by show config command which is accessible in administrator level of privilege.

**Parameters**
None.

**Restrictions**
None.

**Example usage:**
To show the current configuration access profile on the Switch:

DES-3528:5#show current_config access_profile
Command: show current_config access_profile

Success.
DES-3528:5#show current_config access_profile
Command: show current_config access_profile

#-----------------------------------------------------

# ACL

# A CL

create access_profile ethernet vlan profile_id 1
config access_profile profile_id 1 add access_id 1 ethernet vlan default port 1 permit

DES-3528:5#
SAFEGUARD ENGINE COMMANDS

Periodically, malicious hosts on the network will attack the Switch by utilizing packet flooding (ARP Storm) or other methods. These attacks may increase the CPU utilization beyond its capability. To alleviate this problem, the Safeguard Engine function was added to the Switch’s software.

The Safeguard Engine can help the overall operability of the Switch by minimizing the workload of the Switch while the attack is ongoing, thus making it capable to forward essential packets over its network in a limited bandwidth. When the Switch either (a) receives too many packets to process or (b) exerts too much memory, it will enter an Exhausted mode. When in this mode, the Switch will perform the following tasks to minimize the CPU usage:

a. It will limit bandwidth of receiving ARP packets.
b. It will limit the bandwidth of IP packets received by the Switch.

IP packets may also be limited by the Switch by configuring only certain IP addresses to be accepted. This method can be accomplished through the CPU Interface Filtering mechanism explained in the previous section. Once the user configures these acceptable IP addresses, other packets containing different IP addresses will be dropped by the Switch, thus limiting the bandwidth of IP packets. To keep the process moving fast, be sure not to add many conditions on which to accept these acceptable IP addresses and their packets, this limiting the CPU utilization.

Once in Exhausted mode, the packet flow will decrease by half of the level that caused the Switch to enter Exhausted mode. After the packet flow has stabilized, the rate will initially increase by 25% and then return to a normal packet flow.

**NOTICE:** When the Safeguard Engine is enabled, the Switch will allot bandwidth to various traffic flows (ARP, IP) using the FFP (Fast Filter Processor) metering table to control the CPU utilization and limit traffic. This may limit the speed of routing traffic over the network.

The Safeguard Engine commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config safeguard_engine</td>
<td>{ state [enable</td>
</tr>
<tr>
<td>show safeguard_engine</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config safeguard_engine**

**Purpose**: Used to configure ARP storm control for system.

**Syntax**: `config safeguard_engine { state [enable | disable] | utilization \{ rising <value 20-100> | falling <value 20-100> \} | trap_log [enable | disable] | mode \{ strict | fuzzy \} \} (1)`

**Description**: This command is used to configure Safeguard Engine to minimize the effects of an ARP storm.

**Parameters**

- `state [enable | disable]` – Select the running state of the Safeguard Engine function as enable or disable.
- `utilization` – Select this option to trigger the Safeguard Engine function to enable based on the following determinates:
  - `rising <value 20-100>` – The user can set a percentage value of the rising CPU utilization which will trigger the Safeguard Engine function. Once the CPU utilization rises to this percentage, the Safeguard Engine mechanism will initiate.
  - `falling <value 20-100>` – The user can set a percentage value of the falling CPU utilization which will trigger the Safeguard Engine function to cease. Once the CPU utilization falls to this percentage, the Safeguard Engine mechanism will shut down.
- `trap_log [enable | disable]` – Choose whether to enable or disable the sending of messages to the device’s SNMP agent and switch log once the Safeguard Engine has been activated by a high CPU utilization rate.
- `mode \{ strict | fuzzy \}` – Used to select the type of Safeguard Engine to be activated by the Switch when the CPU utilization reaches a high rate. The user may select:
**config safeguard_engine**

- **strict** – If selected, this function will stop accepting all ARP packets not intended for the Switch, and will stop receiving all unnecessary broadcast IP packets, until the storm has subsided.
- **fuzzy** – If selected, this function will instruct the Switch to minimize the IP and ARP traffic flow to the CPU by dynamically allotting an even bandwidth to all traffic flows.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the safeguard engine for the Switch:

```
DES-3528:5#config safeguard_engine state enable utilization rising 45
Command: config safeguard_engine state enable utilization rising 45
Success.
DES-3528:5#
```

**show safeguard_engine**

**Purpose**

Used to display current Safeguard Engine settings.

**Syntax**

`show safeguard_engine`

**Description**

This will list the current status and type of the Safeguard Engine settings currently configured.

**Parameters**

None.

**Restrictions**

None.

Example usage:

To display the safeguard engine status:

```
DES-3528:5#show safeguard_engine
Command: show safeguard_engine

Safeguard Engine State : Disabled
Safeguard Engine Current Status : Normal Mode
==================================================================================
CPU Utilization Information:
Rising Threshold : 30%
Falling Threshold : 20%
Trap/Log State : Enabled
Mode : Strict

DES-3528:5#
```
FILTER COMMANDS (DHCP SERVER/NetBIOS)

DHCP Server Screening Settings
This function allows you not only to restrict all DHCP Server packets but also to receive any specified DHCP server packets by any specified DHCP client. It is useful when one or more than one DHCP servers are present on the network and both provide DHCP services to different distinct groups of clients. It requires the support of ACL to enable the DHCP server filter function and it will create a deny rule with low priority to block the packets from the untrusted DHCP server. Similarly, the addition of a permitted DHCP entry should be created by ACL with high priority so as to permit packets from the trusted DHCP server.

When the DHCP Server filter function is enabled, all DHCP Server packets will be filtered from a specific port. Also, you are allowed to create entries for specific port-based Server IP address and Client MAC address binding entries. Be aware that the DHCP Server filter function must be enabled first. Once all settings are complete, all DHCP Server packets will be filtered from a specific port except those that meet the Server IP Address and Client MAC Address binding.

NetBIOS Filtering Setting
When the NetBIOS filter is enabled, all NetBIOS packets will be filtered from the specified port. Enabling the NetBIOS filter will create one access profile and create three access rules per port (UDP port numbers 137 and 138 and TCP port number 139).

For Extensive NetBIOS Filter, when it is enabled, all NetBIOS packets over 802.3 frames will be filtered from the specified port. This command is used to configure the state of the NetBIOS filter. Enabling the Extensive NetBIOS filter will create one access profile and create one access rule per port (DSAP (Destination Service Access Point) =F0, and SASP (Source Service Access Point) =F0).

The DHCP Server/NetBIOS Filter commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config filter dhcp_server</td>
<td>[add permit server_ip &lt;ipaddr&gt; [client_mac &lt;macaddr&gt;] ports [portlist]</td>
</tr>
<tr>
<td>show filter dhcp_server</td>
<td>delete permit server_ip &lt;ipaddr&gt; [portlist]</td>
</tr>
<tr>
<td>config filter dhcp_server trap_log</td>
<td>[enable</td>
</tr>
<tr>
<td>config filter dhcp_server</td>
<td>[illegal_server_log_suppress_duration [1min</td>
</tr>
<tr>
<td>config filter netbios</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show filter netbios</td>
<td></td>
</tr>
<tr>
<td>config filter extensive_netbios</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show filter extensive_netbios</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
### config filter dhcp_server

**Purpose**
DHCP server packets except those that have been IP/client MAC bound will be filtered. This command is used to configure the state of the function for filtering of DHCP server packet and to add/delete the DHCP server/client binding entry.

**Syntax**
```
[add permit server_ip <ipaddr> {client_mac <macaddr>} ports [<portlist> | all] | delete permit server_ip <ipaddr> {client_mac <macaddr>} ports [<portlist> | all] | ports [<portlist> | all] state [enable | disable]]
```

**Description**
This command has two purposes: to filter all DHCP server packets on the specified port(s) and to allow some DHCP server packets to be forwarded if they are on the pre-defined server IP address/MAC address binding list. Thus the DHCP server can be restricted to service a specified DHCP client. This is useful when there are two or more DHCP servers present on a network.

**Parameters**
- `ipaddr` – The IP address of the DHCP server to be filtered
- `macaddr` – The MAC address of the DHCP client.
- `state` – Enable/Disable the DHCP filter state
- `ports <portlist>` – The port number to which the DHCP filter will be applied.

**Restrictions**
- Only Administrator-level users can issue this command.
- Enabling the DHCP filter will create one access profile and create one access rule per port (UDP port 67).
- Addition of a DHCP filter permit entry will create one access profile and create one access rule (DA = client MAC address, SA = source IP address and UDP port 67).

**Example usage:**

To add an entry from the DHCP server/client filter list in the switch’s database:

```
DES-3528:5#config filter dhcp_server add permit server_ip 10.1.1.1 client_mac 00-00-00-00-00-01 port 1-26
Command: config filter dhcp_server add permit server_ip 10.1.1.1 client_mac 00-00-00-00-00-01 port 1-26
Success
```

DES-3528:5#

To configure the DHCP filter state:

```
DES-3528:5#config filter dhcp_server ports 1-10 state enable
Command: config filter dhcp_server ports 1-10 state enable
Success
```

DES-3528:5#

### show filter dhcp_server

**Purpose**
Used to display current DHCP server/client filter list created on the switch.

**Syntax**
Show filter dhcp_server

**Description**
This command is used to display DHCP server/client filter list created on the switch.

**Parameters**
None.

**Restrictions**
Only Administrator users can issue this command.

**Example usage:**

To display the DHCP server filter list created on the switch:

```
DES-3528:5#show filter dhcp_server
```
DES-3528:5# show filter dhcp_server
Command: show filter dhcp_server

Filter DHCP Server Trap/Log State: Disabled

DES-3528:5#

**config filter dhcp_server trap_log**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable the trap or log that is triggered by the DHCP server filter events.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config filter dhcp_server trap_log [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable or disable the trap or log that is triggered by the DHCP server filter events.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable log and trap for the DHCP server filter event.

DES-3528:5# config filter dhcp_server trap_log disable
Command: config filter dhcp_server trap_log disable
Success.

DES-3528:5#

**config filter dhcp_server illegal_server_log_suppress_duration**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the illegal server log suppress duration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config filter dhcp_server illegal_server_log_suppress_duration [ 1min</td>
</tr>
<tr>
<td>Description</td>
<td>The DHCP server filtering function filters the illegal DHCP server packet. The DHCP server that sends the illegal packets will be logged. This command is used to suppress the logging of DHCP server that continues to send illegal DHCP packets. The same illegal DHCP server IP address detected will be logged only once within the duration.</td>
</tr>
<tr>
<td>Parameters</td>
<td>illegal_server_log_suppress_duration [ 1min</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the illegal_server_log_suppress_duration
config filter netbios

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the switch to filter NetBIOS packets from specified ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config filter netbios [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will configure the switch to filter NetBIOS packets from the specified ports.</td>
</tr>
</tbody>
</table>
| Parameters       | `<portlist>` – The list of port numbers to which the NetBIOS filter will be applied.  

| state [enable | disable] – Used to enable/disable the NetBIOS filter on the switch. |
| Restrictions    | Only Administrator-level users can issue this command. |
|                 | Enabling the NetBIOS filter will create one access profile and three access rules per port (UDP port number 137 and 138, and TCP port 139). |

Example usage:

To configure the NetBIOS state:

```
DES-3528:5# config filter netbios 1-10 state enable
Command: config filter netbios 1-10 state enable
Success.
DES-3528:5#
```

show filter netbios

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the switch settings to filter NetBIOS packets from specified ports.</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To display the extensive NetBIOS filter status:

```
DES-3528:5# show filter netbios
Command: show filter netbios
Enabled Ports: 1-3
DES-3528:5#
```
config filter extensive_netbios

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the switch to filter 802.3 frame NetBIOS packets from specified ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config filter extensive_netbios [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will configure the switch to filter 802.3 frame NetBIOS packets from the specified ports.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;portlist&gt; – The list of port numbers to which the NetBIOS filter will be applied.</td>
</tr>
<tr>
<td></td>
<td>state [enable</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
<tr>
<td></td>
<td>Enabling the NetBIOS filter will create one access profile and one access rules per port (DSAP=F0, SASP=F0).</td>
</tr>
</tbody>
</table>

Example usage:

To configure the extensive NetBIOS state::

```
DES-3528:5#config filter extensive_netbios 1-10 state enable
Command: config filter extensive_netbios 1-10 state enable
Success.
DES-3528:5#
```

show filter extensive_netbios

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the switch settings to filter NetBIOS packets from specified ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show filter extensive_netbios</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the switch settings to filter NetBIOS packets from the specified ports.</td>
</tr>
<tr>

<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To display the extensive NetBIOS filter status:

```
DES-3528:5#show filter extensive_netbios
Command: show filter extensive_netbios
Enabled Ports: 1-3
DES-3528:5#```
The L3 CPU Filter commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

When the Switch receives a packet such as PIM, DVMRP, OSPF, RIP, VRRP or IGMP query, the L3 CPU filter mode will determine how the packet is handled. If the mode is disabled, the packets will be sent to the CPU and will be treated according to the RFC standards. If the mode is enabled, the packets will be discarded. That means the packets will not be sent to the CPU and will not be propagated.

```
<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config cpu_filter l3_control_pkt</td>
<td>&lt;portlist&gt; [(dvmrp</td>
</tr>
<tr>
<td>show cpu_filter l3_control_pkt</td>
<td>{&lt;portlist&gt;}</td>
</tr>
</tbody>
</table>
```

Each command is listed, in detail, in the following sections.

### config cpu_filter l3_control_pkt

**Purpose**
Used to discard the L3 control packets sent to CPU from specific ports.

**Syntax**
```
config cpu_filter l3_control_pkt <portlist> [(dvmrp | pim | igmp_query)(1) | all] state [enable | disable]
```

**Description**
This command is used to discard the L3 control packets sent to CPU from specific ports.

**Parameters**
- **portlist** – Specifies the port list to filter control packet.
- **dvmrp** – Specifies that the filtered L3 control protocol as DVMRP.
- **pim** – Specifies that the filtered L3 control protocol as PIM.
- **igmp_query** – Specifies that the filtered L3 control protocol as IGMP query.
- **state** – Enable or disable the filtering function. Default is `disable`.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To filter DVMRP and PIM in port 1-26

```
DES-3528:5# config filter control_packet 1-26 dvmrp pim state enable
Command: config filter control_packet 1-26 dvmrp pim state enable
Success.
DES-3528:5#
```

### show cpu_filter l3_control_pkt ports

**Purpose**
Used to display the L3 control packet CPU filtering status.

**Syntax**
```
show cpu_filter l3_control_pkt ports {<portlist>}
```

**Description**
This command is used to display the L3 control packet CPU filtering status.

**Parameters**
- **portlist** – Specifies the port list to filter control packet.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To display the filtering status:

```
DES-3528:5# show cpu_filter l3_control_pkt ports 1:1-1:2
Command: show cpu_filter l3_control_pkt ports 1:1-1:2

<table>
<thead>
<tr>
<th>Port</th>
<th>IGMP Query</th>
<th>DVMRP</th>
<th>PIM</th>
</tr>
</thead>
<tbody>

</table>

DES-3528:5#
```
LOOP-BACK DETECTION COMMANDS

The Loop-back Detection commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config loopdetect</td>
<td>{recover_timer [value 0</td>
</tr>
<tr>
<td>config loopdetect ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config loopdetect trap</td>
<td>[ none</td>
</tr>
<tr>
<td>enable loopdetect</td>
<td></td>
</tr>
<tr>
<td>disable loopdetect</td>
<td></td>
</tr>
<tr>
<td>show loopdetect</td>
<td></td>
</tr>
<tr>
<td>show loopdetect ports</td>
<td>[all</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config loopdetect**

**Purpose**
Used to configure loop-back detection on the switch.

**Syntax**
```
config loopdetect (recover_timer [value 0 | <value 60-1000000>] | interval <1-32767> | mode [port-based | vlan-based]) (1)
```

**Description**
This command is used to configure loop-back detection on the switch.

**Parameters**
- **recover_timer** – The time interval (in seconds) used by the Auto-Recovery mechanism to decide how long to check if the loop status is gone. The valid range is 60 to 1000000. Zero is a special value which means to disable the auto-recovery mechanism. The default value is 60.
- **interval** – The time interval (in seconds) at which the remote device transmits all the CTP packets to detect the loop-back event. The default value is 10, with a valid range of 1 to 32767.
- **mode** – In port-based mode, the port will be disabled during the loop detection. In vlan-based mode, the port cannot process VLAN packets destined for ports involved in detecting the loop.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To set the recover time to 0, and interval to 20, and VLAN-based mode:

```
DES-3528:5#config loopdetect recover_timer 0 interval 20 mode vlan-based
```

Command: config loopdetect recover_timer 0 interval 20 mode vlan-based

Success

DES-3528:5#
### `config loopdetect ports`

**Purpose:** Used to configure loop-back detection on the switch.

**Syntax:**
```
config loopdetect ports [<portlist> | all] [state [enable | disable]]
```

**Description:**
This command is used to configure loop-back detection on the switch.

**Parameters:**
- `<portlist>` – Specifies a range of ports for the loop-back detection
- `state [enable | disable]` – Allows the loop-back detection to be disabled and enabled.

**Restrictions:**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To set the loop-detect state to enable:

```
DES-3528:5#config loopdetect ports 1-5 state enable
Command: config loopdetect ports 1-5 state enable
Success
DES-3528:5#
```

### `config loopdetect trap`

**Purpose:** Used to configure trap modes.

**Syntax:**
```
config loopdetect trap [ none | loop_detected | loop_cleared | both ]
```

**Description:**
This command is used to configure trap modes.

**Parameters:**
- `none` – Trap will not be sent for both cases.
- `loop_detected` – Trap is sent when the loop condition is detected.
- `loop_cleared` – Trap is sent when the loop condition is cleared.
- `both` – Trap will be sent in both cases.

**Restrictions:**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To config loop trap both:

```
DES-3528:5#config loopdetect trap both
Command: config loopdetect trap both
Success.
DES-3528:5#
```

### `enable loopdetect`

**Purpose:** Used to globally enable loop-back detection on the switch.

**Syntax:**
```
enable loopdetect
```

**Description:**
This command is used to globally enable loop-back detection on the switch.

**Parameters:**
None.

**Restrictions:**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To enable loop-back detection on the switch:
**disable loopdetect**

**Purpose**
Used to globally disable loop-back detection on the switch.

**Syntax**
disable loopdetect

**Description**
This command is used to globally disable loop-back detection on the switch.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To disable loop-back detection on the switch:

```
DES-3528:5#disable loopdetect
Command: disable loopdetect
Success
DES-3528:5#
```

**show loopdetect**

**Purpose**
Used to display the current loop-back detection settings on the switch.

**Syntax**
show loopdetect

**Description**
This command is used to display the current loop-back detection settings on the switch.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To show loop-detect:

```
DES-3528:5#show loopdetect
Command: show loopdetect

LBD Global Settings
---------------------
LBD Status : Disabled
LBD Mode : Port-Based
LBD Interval : 20
LBD Recover Time : 60
LBD Trap Status : None

DES-3528:5#
```
### show loopdetect ports

**Purpose**
Used to display the current per-port loop-back detection settings on the switch.

**Syntax**
`show loopdetect ports [all | <portlist>]`

**Description**
This command is used to display the current per-port loop-back detection settings on the switch.

**Parameters**
- `<portlist>` – Specifies a range of ports for the loop-back detection
- `all` – Specifies all ports for the loop-back detection.

**Restrictions**
None.

**Example usage:**
To show loop-detect ports:

```
DES-3528:5# show loopdetect ports 1-3
```

```
Port  Loopdetect State  Loop Status
1     Enabled           Normal
2     Enabled           Loop!
3     Enabled           Normal
```

DES-3528:5#
TRAFFIC SEGMENTATION COMMANDS

Traffic segmentation allows users to further sub-divide VLANs into smaller groups of ports that will help to reduce traffic on the VLAN. The VLAN rules take precedence, and then the traffic segmentation rules are applied.

### Command Parameters

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config traffic_segmentation</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show traffic_segmentation</td>
<td>&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

#### config traffic_segmentation

**Purpose**
Used to configure traffic segmentation on the Switch.

**Syntax**
```plaintext
config traffic_segmentation [<portlist> | all] forward_list [null | all | <portlist>]
```

**Description**
This command is used to configure traffic segmentation on the Switch.

**Parameters**
- `<portlist>` – Specifies a port or range of ports that will be configured for traffic segmentation.
- `all` – Specifies all the ports that will be configured for traffic segmentation.
- `forward_list` – Specifies a range of ports that will receive forwarded frames from the ports specified in the `portlist`, above:
  - `null` – No ports are specified.
  - `all` – All ports are specified.
  - `<portlist>` – Specifies a range of ports for the forwarding list. This list must be on the same Switch previously specified for traffic segmentation (i.e. following the `<portlist>` specified above for `config traffic_segmentation`).

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure ports 1 through 10 to be able to forward frames to port 11 through 15:

```
DES-3528:5#config traffic_segmentation 1-10 forward_list 11-15
Command: config traffic_segmentation 1-10 forward_list 11-15
Success.
DES-3528:5#
```

#### show traffic_segmentation

**Purpose**
Used to display the current traffic segmentation configuration on the Switch.

**Syntax**
```plaintext
show traffic_segmentation <portlist>
```

**Description**
This command is used to display the current traffic segmentation configuration on the Switch.

**Parameters**
- `<portlist>` – Specifies a port or range of ports for which the current traffic segmentation configuration on the Switch will be displayed.

**Restrictions**
The port lists for segmentation and the forwarding list must be on the same Switch.

**Example usage:**

To display the current traffic segmentation configuration on the Switch.
Command: show traffic_segmentation

<td>config sflow analyzer_server</td>
<td>&lt; value 1-4 &gt; { timeout [&lt;sec 1-2000000&gt;</td>
</tr>
<tr>
<td>delete sflow analyzer_server</td>
<td>&lt; value 1-4 &gt;</td>
</tr>
<tr>
<td>show sflow analyzer_server</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable sflow**

**Purpose**
Used to enable the sFlow function.

**Syntax**
```
enable sflow
```

**Description**
This command enables the sFlow function.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable sflow:

```
DES-3528:5#enable sflow
Command: enable sflow
Success.
```

**show sflow**

Purpose: Used to show the sFlow function.

Syntax: `show sflow`

Description: This command shows the sFlow function.

Parameters: None.

Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

```
DES-3528:5#show sflow
```
disable sflow

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the sFlow function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable sflow</td>
</tr>
<tr>
<td>Description</td>
<td>This command disables the sFlow function.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To disable sflow:

```
DES-3528:5#disable sflow
Command: disable sflow
Success.
DES-3528:5#
```

show sflow

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the sFlow function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show sflow</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the sFlow function settings on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:
To display sflow:

```
DES-3528:5#show sflow
Command: show sflow

  sFlow Version : 1.00
  sFlow Address : 10.24.73.21
  sFlow State   : Disabled

DES-3528:5#
```
### create sflow flow_sampler

**Purpose**
Used to create the sflow flow_sampler.

**Syntax**
```
create sflow flow_sampler ports [portlist] | all] analyzer_server_id < value 1-4> { rate <value 0- 65535> | maxheadersize < value 18-256>}
```

**Description**
This command is used to create the sFlow flow_sampler. By configuring the sampling function for a port, a sample packet received by this port will be encapsulated and forwarded to the analyzer server at the specified interval.

**Parameters**
- **ports** – Specifies the list of ports to be configured.
- **analyzer_server_id** – The analyzer_server_id specifies the ID of a server analyzer where the packet will be forwarded.
- **rate** – The sampling rate for packet sampling. The configured rate value multiplied by 256 is the actual rate. For example, if the rate is 20, the actual rate 5120. As a result, one packet will be sampled from every 5120 packets. If set to 0, the sampler is disabled. If the rate is not specified, its default value is 0.
- **maxheadersize** – The maximum number of leading bytes in the packet which has been sampled that will be encapsulated and forwarded to the server. If not specified, the default value is 128.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

#### Example usage:
To create sflow flow_sampler:
```
DES-3528:5# create sflow flow_sampler ports all analyzer_server_id 1 rate 10 maxheadersize 100
Command: create sflow flow_sampler ports all analyzer_server_id 1 rate 10 maxheadersize 100
Success.
DES-3528:5#
```

### config sflow flow_sampler

**Purpose**
Used to configure the sflow flow_sampler parameters.

**Syntax**
```
config sflow flow_sampler ports [portlist] | all] { rate <value 0- 65535> | maxheadersize < value 18-256>}(1)
```

**Description**
This command configures the sflow flow_sampler parameters. If the user wants to change the analyzer_server_id, he needs to delete the flow_sampler and creates a new one.

**Parameters**
- **ports** – Specifies the list of ports to be configured.
- **rate** – The sampling rate for packet sampling. The configured rate value multiplied by 256 is the actual rate. For example, if the rate is 20, the actual rate is 5120. As a result, one packet will be sampled from every 5120 packets. If set to 0, the sampler is disabled. If the rate is not specified, its default value is 0.
- **maxheadersize** – The maximum number of leading bytes in the packet which has been sampled that will be encapsulated and forwarded to the server. If not specified, the default value is 128.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

#### Example usage:
To configure sflow flow_sampler:
```
DES-3528:5# config sflow flow_sampler ports all rate 10 maxheadersize 100
Command: config sflow flow_sampler ports all rate 10 maxheadersize 100
Success.
DES-3528:5#
```
DES-3528:5# config sflow flow_sampler ports all rate 10 maxheadersize 100
Command: config sflow flow_sampler ports all rate 10 maxheadersize 100
Success.
DES-3528:5#

**delete sflow flow_sampler**

**Purpose**
Used to delete the sflow flow_sampler.

**Syntax**
delete sflow flow_sampler ports [ <portlist> | all ]

**Description**
This command is used to delete the sflow flow_sampler that has been configured for the specified port.

**Parameters**
ports – Specifies the list of ports to be configured.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To delete all the sflow flow_sampler:
DES-3528:5# delete sflow flow_sampler ports all
Command: delete sflow flow_sampler ports all
Success.
DES-3528:5#

**show sflow flow_sampler**

**Purpose**
Used to show the sflow flow_sampler information of ports which have been created.

**Syntax**
show sflow flow_sampler

**Description**
This command is used to show the sFlow flow_sampler which has been configured for ports. The actual value rate is 256 times the displayed rate value. There are two types of rates. ConfigRate is configured by the user. In order to limit the number of packets sent to the CPU when the rate of traffic to the CPU is high, the sampling rate will be decreased. This is specified as the active rate.

**Parameters**
None.

**Restrictions**
None.

Example usage:
To show the sflow flow_sampler:
DES-3528:5# show sflow flow_sampler
Command: show sflow flow_sampler

<table>
<thead>
<tr>
<th>Port</th>
<th>Analyzer Server ID</th>
<th>Configured Rate</th>

</tr>
</tbody>
</table>

Total Entries: 2
DES-3528:5#
create sflow counter_poller

**Purpose**
Used to create the counter poller for the sFlow function of the Switch.

**Syntax**
create sflow counter_poller ports [<portlist> | all] analyzer_server_id < value 1-4> {interval [disable | <sec 20-120>]}  

**Description**
This command is used to configure the settings for the Switch’s counter poller. This mechanism will take a poll of the IF counters of the Switch and package them with the other previously mentioned data into a datagram which will be sent to the sFlow Analyzer Server for examination.

**Parameters**
- **ports** – Specifies the list of ports to be configured.
- **analyzer_server_id** – The analyzer_server_id is the id of a analyzer_server.
- **interval** – Users may configure the Polling Interval here. The Switch will take a poll of the IF counters every time this interval reaches 0, and this information will be included in the sFlow datagrams that will be sent to the sFlow Analyzer for examination. Choosing the disabled parameter will disable the counter polling for this entry. If interval is not specified, its default value is disable.

**Restrictions**
Only Administrators and Operator-level users can issue this command.

**Example usage:**

To create the sflow counter_poller:

```
DES-3528:5# create sflow counter_poller ports 1 analyzer_server_id 2 interval 40
Command: create sflow counter_poller ports 1 analyzer_server_id 2 interval 40
Success.
```

DES-3528:5#

config sflow counter_poller

**Purpose**
Used to configure the sflow counter_poller parameters.

**Syntax**
config sflow counter_poller ports [<portlist> | all] interval [disable | <sec 20-120>]

**Description**
This command is used to configure the sflow counter_poller parameters. If the user wants to change the analyzer_server_id, he needs to delete the counter_poller and create a new one.

**Parameters**
- **ports** – Specifies the list of ports to be configured.
- **interval** – The maximum number of seconds between successive statistic counter information. If set to disable, the counter-poller is disabled. If an interval is not specified, its default value is disable.

**Restrictions**
Only Administrators and Operator-level users can issue this command.

**Example usage:**

To configure the sflow counter_poller:

```
DES-3528:5# config sflow counter_poller ports 1 interval 40
Command: config sflow counter_poller ports 1 interval 40
```

DES-3528:5#
DES-3528:5# config sflow counter_poller ports 1 interval 40
Command: config sflow counter_poller ports 1 interval 40
Success.
DES-3528:5#

**delete sflow counter_poller**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete the sflow counter_poller.</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrators and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete the sflow counter_poller:

DES-3528:5# delete sflow counter_poller ports 1
Command: delete sflow counter_poller ports 1
Success.
DES-3528:5#

**show sflow counter_poller**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the sflow counter_poller information of ports which have been created.</th>

DES-3528:5#
create sflow analyzer_server

Purpose
Used to create the analyzer_server.

Syntax
create sflow analyzer_server < value 1-4 > owner<name 16> { timeout [<sec 1-2000000> | infinite] | collectoraddress <ipaddr> | collectorport <udp_port_number 1-65535> | maxdatagramsize < value 300-1400> }

Description
This command creates the analyzer_server. You can specify more than one analyzer_server with the same IP address but with different UDP port numbers. You can have up to four unique combinations of IP addresses and UDP port numbers.

Parameters
owner – The entity making use of this sflow analyzer_server. When owner is set or modified, the timeout value will become 400 automatically.

timeout – The length of time before the server is timed out. When the analyzer_server times out, all of the flow_samplers and counter_pollers associated with this analyzer_server will be deleted. “infinite” indicates that analyzer_server never times out. If not specified, its default value is 400.

collectoraddress – The IP address of the analyzer_server. If not specified, the address will be 0.0.0.0 which means that the entry will be inactive.

collectorport – The destination UDP port for sending the sFlow datagrams. If not specified, the default value is 6364.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To create the sflow analyzer_server:

DES-3528:5# create sflow analyzer_server 1 owner monitor
Command: create sflow analyzer_server 1 owner monitor
Success.

config sflow analyzer_server

Purpose
Used to configure the analyzer_server information.

Syntax
config sflow analyzer_server < value 1-4 > { timeout [<sec 1-2000000> | infinite] | collectoraddress <ipaddr> | collectorport <udp_port_number 1-65535> | maxdatagramsize < value 300-1400> }

Description
This command configures the receiver information. You can specify more than one collector with the same IP address if the UDP port numbers are unique.

Parameters
timeout – The length of time before the server is timed out. When the analyzer_server times out, all of the flow_samplers and counter_pollers associated with this analyzer_server will be deleted. “infinite” indicates that analyzer_server never times out. If not specified, its default value is 400.

collectoraddress – The IP address of the analyzer_server. If not specified, the address will be 0.0.0.0 which means that the entry will be inactive.

collectorport – The destination UDP port for sending the sFlow datagrams. If not specified, the default value is 6364.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the sflow analyzer_server:
DES-3528:5# config sflow analyzer_server 2 collectoraddress 10.90.90.9
Command: config sflow analyzer_server 2 collectoraddress 10.90.90.9
Success.
DES-3528:5#

### delete sflow analyzer_server

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete the analyzer_server.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>delete sflow analyzer_server &lt; value 1-4 &gt;</td>

DES-3528:5#
TIME AND SNTP COMMANDS

The Simple Network Time Protocol (SNTP) (an adaptation of the Network Time Protocol (NTP)) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config sntp</td>
<td>{primary &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>show sntp</td>
<td></td>
</tr>
<tr>
<td>enable sntp</td>
<td></td>
</tr>
<tr>
<td>disable sntp</td>
<td></td>
</tr>
<tr>
<td>config time</td>
<td>&lt;date ddmmmyyyy &gt; &lt;time hh:mm:ss&gt;</td>
</tr>
<tr>
<td>config time_zone</td>
<td>{operator [+</td>
</tr>
<tr>
<td>config dst</td>
<td>[disable</td>
</tr>
<tr>
<td>show time</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config sntp

**Purpose**
Used to setup SNTP service.

**Syntax**
config sntp {primary <ipaddr> | secondary <ipaddr> | poll-interval <int 30-99999>}(1)

**Description**
This command is used to configure SNTP service from an SNTP server. SNTP must be enabled for this command to function (See enable sntp).

**Parameters**

- **primary** – This is the primary server from which the SNTP information will be taken.
- **<ipaddr>** – The IP address of the primary server.

- **secondary** – This is the secondary server the SNTP information will be taken from in the event the primary server is unavailable.
- **<ipaddr>** – The IP address for the secondary server.

- **poll-interval <int 30-99999>** – This is the interval between requests for updated SNTP information. The polling interval ranges from 30 to 99,999 seconds.

**Restrictions**
Only Administrator and Operator-level users can issue this command. SNTP service must be enabled for this command to function (enable sntp).

**Example usage:**

To configure SNTP settings:

DES-3528:5#config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30
Command: config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30
Success.

DES-3528:5#
**show sntp**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the SNTP information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show sntp</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display SNTP settings information including the source IP address, time and poll interval.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display SNTP configuration information:

```
DES-3528:5#show sntp
Command: show sntp
Current Time Source      : System Clock
SNTP                     : Disabled
SNTP Primary Server      : 10.1.1.1
SNTP Secondary Server    : 10.1.1.2
SNTP Poll Interval       : 30 sec
DES-3528:5#
```

**enable sntp**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable SNTP server support.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable sntp</td>
</tr>
<tr>
<td>Description</td>
<td>This command enables SNTP support. SNTP service must be separately configured (see config sntp). Enabling and configuring SNTP support will override any manually configured system time settings.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command. SNTP settings must be configured for SNTP to function (config sntp).</td>
</tr>
</tbody>
</table>

Example usage:

To enable the SNTP function:

```
DES-3528:5#enable sntp
Command: enable sntp
Success.
DES-3528:5#
```

**disable sntp**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable SNTP server support.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable sntp</td>
</tr>
<tr>
<td>Description</td>
<td>This command disables SNTP support. SNTP service must be separately configured (see config sntp).</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To disable SNTP support:

```
DES-3528:5#disable snntp
Command: disable snntp
Success.
DES-3528:5#
```

### config time

**Purpose**
Used to manually configure system time and date settings.

**Syntax**
```
config time <date ddmmmyyyy> <time hh:mm:ss>
```

**Description**
This command configures the system time and date settings. These will be overridden if SNTP is configured and enabled.

**Parameters**
- **date** – Express the date using two numerical characters for the day of the month, three alphabetical characters for the name of the month, and four numerical characters for the year. For example: 03aug2003.
- **time** – Express the system time using the format hh:mm:ss, that is, two numerical characters each for the hour using a 24-hour clock, the minute and second. For example: 19:42:30.

**Restrictions**
Only Administrator and Operator-level users can issue this command. Manually configured system time and date settings are overridden if SNTP support is enabled.

**Example usage:**

To manually set system time and date settings:

```
DES-3528:5#config time 30jun2003 16:30:30
Command: config time 30jun2003 16:30:30
Success.
DES-3528:5#
```

### config time_zone

**Purpose**
Used to determine the time zone used in order to adjust the system clock.

**Syntax**
```
config time_zone {operator [+ | -] | hour <gmt_hour 0-13> | min <minute 0-59>}
```

**Description**
This command adjusts system clock settings according to the time zone. Time zone settings will adjust SNTP information accordingly.

**Parameters**
- **operator** – Choose to add (+) or subtract (-) time to adjust for time zone relative to GMT.
- **hour** – Select the number of hours different from GMT.
- **min** – Select the number of minutes difference added or subtracted to adjust the time zone.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure time zone settings:

```
DES-3528:5#config time_zone
Command: config time_zone
Success.
DES-3528:5#
```
DES-3528:5#config time_zone operator + hour 2 min 30
Command: config time_zone operator + hour 2 min 30
Success.

DES-3528:5#

---

**config dst**

**Purpose**
Used to enable and configure time adjustments to allow for the use of Daylight Savings Time (DST).

**Syntax**
```
config dst [disable | repeating {s_week <start_week 1-4,last> | s_day <start_day sun-sat> | s_mth <start_mth 1-12> | s_time start_time hh:mm> | e_week <end_week 1-4,last> | e_day <end_day sun-sat> | e_mth <end_mth 1-12> | e_time <end_time hh:mm> | offset [30 | 60 | 90 | 120]} | annual {s_date start_date 1-31> | s_mth <start_mth 1-12> | s_time <start_time hh:mm> | e_date <end_date 1-31> | e_mth <end_mth 1-12> | e_time <end_time hh:mm> | offset [30 | 60 | 90 | 120]}]
```

**Description**
DST can be enabled and configured using this command. When enabled this will adjust the system clock to comply with any DST requirement. DST adjustment effects system time for both manually configured time and time set using SNTP service.

- **disable** – Disable the DST seasonal time adjustment for the Switch.
- **repeating** – Using repeating mode will enable DST seasonal time adjustment. Repeating mode requires that the DST beginning and ending date be specified using a formula. For example, specify to begin DST on Saturday during the second week of April and end DST on Sunday during the last week of October.
- **annual** – Using annual mode will enable DST seasonal time adjustment. Annual mode requires that the DST beginning and ending date be specified concisely. For example, specify to begin DST on April 3 and end DST on October 14.

**Parameters**

- **s_week** – Configure the week of the month in which DST begins.
  - `<start_week 1-4,last>` – The number of the week during the month in which DST begins where 1 is the first week, 2 is the second week and so on, last is the last week of the month.

- **e_week** – Configure the week of the month in which DST ends.
  - `<end_week 1-4,last>` – The number of the week during the month in which DST ends where 1 is the first week, 2 is the second week and so on, last is the last week of the month.

- **s_day** – Configure the day of the week in which DST begins.
  - `<start_day sun-sat>` – The day of the week in which DST begins expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)

- **e_day** – Configure the day of the week in which DST ends.
  - `<end_day sun-sat>` – The day of the week in which DST ends expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)

- **s_mth** – Configure the month in which DST begins.
  - `<start_mth 1-12>` – The month to begin DST expressed as a number.

- **e_mth** – Configure the month in which DST ends.
  - `<end_mth 1-12>` – The month to end DST expressed as a number.

- **s_time** – Configure the time of day to begin DST.
  - `<start_time hh:mm>` – Time is expressed using a 24-hour clock, in hours and minutes.
config dst

  e_time – Configure the time of day to end DST.
  •  <end_time hh:mm> – Time is expressed using a 24-hour clock, in hours and minutes.

  s_date – Configure the specific date (day of the month) to begin DST.
  •  <start_date 1-31> – The start date is expressed numerically.

  e_date – Configure the specific date (day of the month) to begin DST.
  •  <end_date 1-31> – The end date is expressed numerically.

  offset [30 | 60 | 90 | 120] – Indicates number of minutes to add or to subtract during the summertime. The possible offset times are 30, 60, 90, 120. The default value is 60

Restrictions

Only Administrator and Operator-level users can issue this command.

Example usage:

To configure daylight savings time on the Switch:

```
DES-3528:5#config dst repeating s_week 2 s_day tue s_mth 4 s_time 15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30
Command: config dst repeating s_week 2 s_day tue s_mth 4 s_time 15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30
Success.
DES-3528:5#
```

show time

Purpose

Used to display the current time settings and status.

Syntax

show time

Description

This command displays system time and date configuration as well as display current system time.

Parameters

None.

Restrictions

None.

Example usage:

To show the time currently set on the Switch’s System clock:

```
DES-3528:5#show time
Command: show time

Current Time Source : System Clock
Boot Time : 11 Mar 2000  17:41:32
Time Zone : GMT +00:00
Daylight Saving Time : Disabled
Offset In Minutes : 60
Repeating From : Apr 1st Sun 00:00
   To : Oct last Sun 00:00
Annual From : 29 Apr 00:00
   To : 12 Oct 00:00
DES-3528:5#
```
The ARP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<td>{ipif &lt;ipif_name 12&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### create arpentry

**Purpose**
Used to make a static entry into the ARP table.

**Syntax**
create arpentry <ipaddr> <macaddr>

**Description**
This command is used to enter an IP address and the corresponding MAC address into the Switch’s ARP table.

**Parameters**
- `<ipaddr>` – The IP address of the end node or station.
- `<macaddr>` – The MAC address corresponding to the IP address above.

**Restrictions**
Only Administrator and Operator-level users can issue this command. The Switch supports up to 255 static ARP entries.

**Example Usage:**
To create a static arp entry for the IP address 10.48.74.121 and MAC address 00:50:BA:00:07:36:
create arpentry 10.48.74.121 00-50-BA-00-07-36
Command: create arpentry 10.48.74.121 00-50-BA-00-07-36
Success.

---

**config arpentry**

**Purpose**
Used to configure a static entry in the ARP table.

**Syntax**
`config arpentry <ipaddr> <macaddr>`

**Description**
This command is used to configure a static entry in the ARP Table. The user may specify the IP address and the corresponding MAC address of an entry in the Switch's ARP table.

**Parameters**
- `<ipaddr>` – The IP address of the end node or station.
- `<macaddr>` – The MAC address corresponding to the IP address.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example Usage:
To configure a static ARP entry for the IP address 10.48.74.12 and MAC address 00:50:BA:00:07:36:

```
DES-3528:5# config arpentry 10.48.74.12 00-50-BA-00-07-36
Command: config arpentry 10.48.74.12 00-50-BA-00-07-36
Success.
DES-3528:5#
```

---

**delete arpentry**

**Purpose**
Used to delete a static entry into the ARP table.

**Syntax**
`delete arpentry [<ipaddr> | all]`

**Description**
This command is used to delete a static ARP entry, made using the `create arpentry` command above, by specifying either the IP address of the entry or all. Specifying `all` clears the Switch's ARP table.

**Parameters**
- `<ipaddr>` – The IP address of the end node or station.
- `all` – Deletes all ARP entries.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example Usage:
To delete an entry of IP address 10.48.74.121 from the ARP table:

```
DES-3528:5# delete arpentry 10.48.74.121
Command: delete arpentry 10.48.74.121
Success.
DES-3528:5#
```
config arp_aging time

Purpose
Used to configure the age-out timer for ARP table entries on the Switch.

Syntax
config arp_aging time \[<sec 30-3932100> | 0\]

Description
This command sets the maximum amount of time, in seconds, that an ARP entry can remain in the Switch's ARP table, without being accessed, before it is dropped from the table.

Parameters
time \[<sec 30-3932100> | 0\] – The ARP age-out time, in seconds. The value may be set in the range of 0, or 30 to 3932100 seconds with a default setting of 1200 seconds.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example Usage:
To configure ARP aging time:

```
DES-3528:5#config arp_aging time 30
Command: config arp_aging time 30
Success.
DES-3528:5#
```

show arpentry

Purpose
Used to display the ARP table.

Syntax
show arpentry \{ipif <ipif_name 12> | ipaddress <ipaddr> | static \}

Description
This command is used to display the current contents of the Switch's ARP table.

Parameters
ipif <ipif_name 12> – The name of the IP interface the end node or station for which the ARP table entry was made, resides on.
ipaddress <ipaddr> – The network address corresponding to the IP interface name above.
static – Displays the static entries to the ARP table.

Restrictions
None.

Example Usage:
To display the ARP table:

```
DES-3528:5#show arpentry
success.
DES-3528:5#
```
DES-3528:5#show arpentry
Command: show arpentry

clear arptable

Purpose: Used to remove all dynamic ARP table entries.

Syntax: clear arptable

Description: This command is used to remove dynamic ARP table entries from the Switch’s ARP table. Static ARP table entries are not affected.

Parameters: None.

Restrictions: Only Administrator and Operator-level users can issue this command.

Example Usage:

To remove dynamic entries in the ARP table:

DES-3528:5#clear arptable
Command: clear arptable

Success.

DES-3528:5#
**config arp_spoofing_prevention**

**Purpose**
Used to config to prevent ARP spoofing attack.

**Syntax**
```
cfg arp_spoofing_prevention [add gateway_ip <ipaddr> gateway_mac <macaddr> 
ports [<portlist> | all] | delete gateway_ip <ipaddr>]
```

**Description**
This command is used to configure the spoofing prevention entry so as to prevent the 
spoofing of protected gateway’s MAC address. When an entry is created, if the sender IP of 
the ARP packet matches the gateway IP of the entry, but the sender MAC field and source 
MAC field do not match the gateway’s MAC, then MAC of the entry will be dropped by the 
Switch.

**Parameters**
- `add gateway_ip <ipaddr>` – Specifies a gateway ip to be configured.
- `add gateway_mac <macaddr>` – Specifies a gateway mac to be configured.
- `ports <portlist>` - Specifies a port or range of ports to be configured.
- `ports all` – Specifies all of ports to be configured.
- `delete gateway_ip` – Specifies a gateway ip to be removed.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example Usage:**

To add an entry for ARP spoofing prevention:
```
DES-3528:5# config arp_spoofing_prevention add gateway_ip 10.254.254.251 gateway_mac 00-00-00-11-11-11 ports 1-2
Command: config arp_spoofing_prevention add gateway_ip 10.254.254.251 gateway_mac 00-00-00-11-11-11 ports 1-2
Success.
```

**show arp_spoofing_prevention**

**Purpose**
Used to show the arp spoofing_prevention entry.

**Syntax**
```
show arp_spoofing_prevention
```

**Description**
This command is used to display the current ARP spoofing prevention entry.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example Usage:**

To add an entry for ARP spoofing prevention:
```
DES-3528:5# show arp_spoofing_prevention
Command: show arp_spoofing_prevention

DES-3528:5#
### config gratuitous_arp send ipif_status_up

**Purpose**
Used to enable/disable the sending of gratuitous ARP requests while the IP interface status comes up.

**Syntax**
config gratuitous_arp send ipif_status_up [enable | disable]

**Description**
The command is used to enable/disable sending of gratuitous ARP request packets while the IPIF interface comes up. This is used to automatically announce the interface’s IP address to other nodes. By default, the state is disabled.

**Parameters**
- **enable** – Enable sending of gratuitous ARP when IPIF status comes up.
- **disable** – Disable sending of gratuitous ARP when IPIF status comes up.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To enable send gratuitous ARP request in a normal situation:

```
DES-3528:5#config gratuitous_arp send ipif_status_up enable
Command: config gratuitous_arp send ipif_status_up enable
Success.
DES-3528:5#
```

### config gratuitous_arp send dup_ip_detected

**Purpose**
Used to enable/disable the sending of gratuitous ARP requests while a duplicate IP address is being detected.

**Syntax**
config gratuitous_arp send duplicate_ip_detected [enable | disable]

**Description**
The command is used to enable/disable the sending of gratuitous ARP request packets when a duplicate IP has been detected. By default, the state is disabled. For this command, the duplicate IP detected means that the system received an ARP request packet that is sent by an IP address that matches the system’s own IP address. In this case, the system knows that somebody is using an IP address that is in conflict with the system. In order to reclaim the correct host of this IP address, the system can send out the gratuitous ARP request packet for this duplicate IP address.

**Parameters**
- **enable** – Enable sending of gratuitous ARP when a duplicate IP is detected.
- **disable** – Disable sending of gratuitous ARP when a duplicate IP is detected.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example Usage:**
To enable send a gratuitous ARP request when a duplicate IP is detected:

```
DES-3528:5#config gratuitous_arp send duplicate_ip_detected enable
Command: config gratuitous_arp send duplicate_ip_detected enable
Success.
DES-3528:5#
```
**config gratuitous_arp learning**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable/disable the learning of ARP entries in the ARP cache based on the received gratuitous ARP packets.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config gratuitous_arp learning [enable</td>
</tr>
<tr>
<td>Description</td>
<td>The command is used to enable/disable updating the ARP cache based on the received gratuitous ARP packets. The gratuitous ARP packet is sent by a source IP address that is identical to the IP that the packet is queries for. Note that, with the gratuitous ARP learning, the system will not learn new entry but only do the update on the ARP table based on the received gratuitous ARP packet. By default, the state is disabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>enable</code> – Enable learning of ARP entry based on the received gratuitous ARP packet. \n<code>disable</code> – Disable learning of ARP entry based on the received gratuitous ARP packet.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable learning of ARP entry based on the received gratuitous ARP packet:

```
DES-3528:5#config gratuitous_arp learning enable
Command: config gratuitous_arp learning enable
Success.
DES-3528:5#
```

**enable gratuitous_arp trap & log**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable gratuitous ARP trap and log state.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`enable gratuitous_arp {ipif &lt;ipif_name 12&gt;} {trap</td>
</tr>
<tr>
<td>Description</td>
<td>The command is used to enable gratuitous ARP trap and log state. The switch can trap and log the IP conflict event to inform the administrator. By default, trap is disabled and event log is disabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>ipif &lt;ipif_name 12&gt;</code> – The name of the IP interface the end node or station for which the ARP table entry was made, resides on. \n`{trap</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable system interface’s gratuitous ARP log and trap:

```
DES-3528:5#enable gratuitous_arp System trap log
Command: enable gratuitous_arp System trap log
Success.
DES-3528:5#
```
### disable gratuitous_arp trap & log

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable gratuitous ARP trap and log state.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`disable gratuitous_arp {ipif &lt;ipif_name 12&gt;} {trap</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable gratuitous ARP trap and log state. When the trap and log are disabled, the switch won’t trap and log IP conflict events to inform the administrator.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;ipif &lt;ipif_name 12&gt;</code> – The name of the IP interface the end node or station for which the ARP table entry was made, resides on.</td>
</tr>
<tr>
<td></td>
<td>`{trap</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example Usage:**

To disable the system interface’s gratuitous ARP log and trap:

```
DES-3528:5#disable gratuitous_arp System trap log
Command: disable gratuitous_arp System trap log
Success.
DES-3528:5#
```

### config gratuitous_arp send periodically

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the interval for periodical sending of gratuitous ARP request packet.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config gratuitous_arp send periodically ipif &lt;ipif_name 12&gt; interval &lt;value 0-65535&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>The command is used to configure the interval for the periodic sending of gratuitous ARP request packets. By default, the interval is 0.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;ipif_name 12&gt;</code> – The name of the Layer 3 interface.</td>
</tr>
<tr>
<td></td>
<td><code>&lt;value 0-65535&gt;</code> – Periodically send gratuitous ARP interval time in seconds. 0 – means not to send gratuitous ARP periodically.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To configure gratuitous ARP interval to 5 for IPIF System:

```
DES-3528:5#config gratuitous_arp send periodically ipif System interval 5
Command: config gratuitous_arp send periodically ipif System interval 5
Success.
DES-3528:5#
```

### show gratuitous_arp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display gratuitous ARP configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show gratuitous_arp {ipif &lt;ipif_name&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display gratuitous ARP configuration.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;ipif_name 12&gt;</code> – The interface name of the Layer 3 device.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>
Example usage:

To display gratuitous ARP log and trap state:

```
DES-3528:5#show gratuitous_arp
Command: show gratuitous_arp

Send on IPIF Status Up    : Disabled
Send on Duplicate_IP_Detected : Disabled
Gratuitous ARP Learning   : Disabled

IP Interface Name : System
    Gratuitous ARP Trap    : Disabled
    Gratuitous ARP Log     : Disabled
    Gratuitous ARP Periodical Send Interval : 0

Total Entries: 1

DES-3528:5#
```
 ROUTING TABLE COMMANDS

The routing table commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create iproute</td>
<td>[default ] &lt;ipaddr&gt; (&lt;metric 1-65535&gt;)</td>
</tr>
<tr>
<td>delete iproute</td>
<td>[default]</td>
</tr>
<tr>
<td>show iproute</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create iproute**

**Purpose**
Used to create IP route entries to the Switch’s IP routing table.

**Syntax**
create iproute [default ] <ipaddr> (<metric 1-65535>)

**Description**
This command is used to create a default static IP route entry to the Switch’s IP routing table.

**Parameters**
default – Specifies to create an IP route entry.
<ipaddr> – The gateway IP address for the next hop router.
<metric 1–65535> – Allows the entry of a routing protocol metric entry, representing the number of routers between the Switch and the IP address above. The default setting is 1.

**Restrictions**
 Only Administrator and Operator-level users can issue this command.

**Example usage:**
To add the default static address 10.48.74.121, with a metric setting of 1, to the routing table:

```
DES-3528:5#create iproute default 10.48.74.121 1
Command: create iproute default 10.48.74.121 1
Success.
DES-3528:5#
```

**delete iproute**

**Purpose**
Used to delete a default IP route entry from the Switch’s IP routing table.

**Syntax**
delete iproute [default]

**Description**
This command will delete an existing default entry from the Switch’s IP routing table.

**Parameters**
default – Specifies to delete a default IP route entry.

**Restrictions**
 Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete the default Gateway from the routing table:
DES-3528:5# delete iproute default
Command: delete iproute default
Success.

DES-3528:5#

**show iproute**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the Switch’s current IP routing table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show iproute</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the Switch’s current IP routing table.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the contents of the IP routing table:

DES-3528:5# show iproute
Command: show iproute

Routing Table

MAC NOTIFICATION COMMANDS

The MAC notification commands in the Command Line Interface (CLI) are listed, in the following table, along with their appropriate parameters.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable mac_notification</td>
<td></td>
</tr>
<tr>
<td>disable mac_notification</td>
<td></td>
</tr>
<tr>
<td>config mac_notification</td>
<td>(interval &lt;int 1-2147483647&gt;</td>
</tr>
<tr>
<td>config mac_notification ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show mac_notification</td>
<td></td>
</tr>
<tr>
<td>show mac_notification ports</td>
<td>[&lt;portlist&gt;]</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable mac_notification**

**Purpose**
Used to enable global MAC address table notification on the Switch.

**Syntax**
```
enable mac_notification
```

**Description**
This command is used to enable MAC address notification without changing configuration.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To enable MAC notification without changing basic configuration:

```
DES-3528:5#enable mac_notification
Command: enable mac_notification
Success.
DES-3528:5#
```

**disable mac_notification**

**Purpose**
Used to disable global MAC address table notification on the Switch.

**Syntax**
```
disable mac_notification
```

**Description**
This command is used to disable MAC address notification without changing configuration.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To disable MAC notification without changing basic configuration:

```
DES-3528:5#disable mac_notification
Command: disable mac_notification
Success.
DES-3528:5#
```
### config mac_notification

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure MAC address notification.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config mac_notification {interval &lt;int 1-2147483647&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to monitor MAC addresses learned and entered into the FDB.</td>
</tr>
</tbody>
</table>
| Parameters | **interval** <sec 1-2147483647> – The time in seconds between notifications. The user may choose an interval between 1 and 2,147,483,647 seconds.  
**historysize** <1-500> – The maximum number of entries listed in the history log used for notification. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure the Switch’s MAC address table notification global settings:

```
DES-3528:5#config mac_notification interval 1 historysize 500
Command: config mac_notification interval 1 historysize 500
Success.
DES-3528:5#
```

### config mac_notification ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure MAC address notification status settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config mac_notification ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to monitor MAC addresses learned and entered into the FDB.</td>
</tr>
</tbody>
</table>
| Parameters | **<portlist>** – Specify a port or range of ports to be configured.  
**all** – Entering this command will set all ports on the system.  
[**enable** | **disable**] – These commands will enable or disable MAC address table notification on the Switch. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To enable port 7 for MAC address table notification:

```
DES-3528:5#config mac_notification ports 7 enable
Command: config mac_notification ports 7 enable
Success.
DES-3528:5#
```

### show mac_notification

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the Switch’s MAC address table notification global settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show mac_notification</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the Switch’s MAC address table notification global settings.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>
Example usage:

To view the Switch’s MAC address table notification global settings:

```
DES-3528:5#show mac_notification
Command: show mac_notification

Global MAC Notification Settings
State          : Enabled
Interval       : 1
History Size   : 1

DES-3528:5#
```

```
show mac_notification ports
Purpose        Used to display the Switch’s MAC address table notification status settings.
Syntax         show mac_notification ports {<portlist>}
Description    This command is used to display the Switch’s MAC address table notification status settings.
Parameters     <portlist> – Specify a port or group of ports to be viewed.
                Entering this command without the parameter will display the MAC notification table for all ports.
Restrictions   None.
```

Example usage:

To display the MAC address table notification status settings for ports 1-7:

```
DES-3528:5#show mac_notification ports 1-7
Command: show mac_notification ports 1-7

Port #  MAC Address Table Notification State
------- ------------------------------
  1      Disabled
  2      Disabled
  3      Disabled
  4      Disabled
  5      Disabled
  6      Disabled
  7      Disabled

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
```
ACCESS AUTHENTICATION CONTROL COMMANDS

The TACACS / XTACACS / TACACS+ / RADIUS commands allow secure access to the Switch using the TACACS / XTACACS / TACACS+ / RADIUS protocols. When a user logs in to the Switch or tries to access the administrator level privilege, he or she is prompted for a password. If TACACS / XTACACS / TACACS+ / RADIUS authentication is enabled on the Switch, it will contact a TACACS / XTACACS / TACACS+ / RADIUS server to verify the user. If the user is verified, he or she is granted access to the Switch.

There are currently three versions of the TACACS security protocol, each a separate entity. The Switch’s software supports the following versions of TACACS:

- TACACS (Terminal Access Controller Access Control System) — Provides password checking and authentication, and notification of user actions for security purposes utilizing via one or more centralized TACACS servers, utilizing the UDP protocol for packet transmission.

- Extended TACACS (XTACACS) — An extension of the TACACS protocol with the ability to provide more types of authentication requests and more types of response codes than TACACS. This protocol also uses UDP to transmit packets.

- TACACS+ (Terminal Access Controller Access Control System plus) — Provides detailed access control for authentication for network devices. TACACS+ is facilitated through Authentication commands via one or more centralized servers. The TACACS+ protocol encrypts all traffic between the Switch and the TACACS+ daemon, using the TCP protocol to ensure reliable delivery.

The Switch also supports the RADIUS protocol for authentication using the Access Authentication Control commands. RADIUS or Remote Authentication Dial In User Server also uses a remote server for authentication and can be responsible for receiving user connection requests, authenticating the user and returning all configuration information necessary for the client to deliver service through the user. RADIUS may be facilitated on this Switch using the commands listed in this section.

In order for the TACACS / XTACACS / TACACS+ / RADIUS security function to work properly, a TACACS / XTACACS / TACACS+ / RADIUS server must be configured on a device other than the Switch, called a server host and it must include usernames and passwords for authentication. When the user is prompted by the Switch to enter usernames and passwords for authentication, the Switch contacts the TACACS / XTACACS / TACACS+ / RADIUS server to verify, and the server will respond with one of three messages:

A) The server verifies the username and password, and the user is granted normal user privileges on the Switch.
B) The server will not accept the username and password and the user is denied access to the Switch.
C) The server doesn’t respond to the verification query. At this point, the Switch receives the timeout from the server and then moves to the next method of verification configured in the method list.

The Switch has four built-in server groups, one for each of the TACACS, XTACACS, TACACS+ and RADIUS protocols. These built-in server groups are used to authenticate users trying to access the Switch. The users will set server hosts in a preferable order in the built-in server group and when a user tries to gain access to the Switch, the Switch will ask the first server host for authentication. If no authentication is made, the second server host in the list will be queried, and so on. The built-in server group can only have hosts that are running the specified protocol. For example, the TACACS server group can only have TACACS server hosts.

The administrator for the Switch may set up five different authentication techniques per user-defined method list (TACACS / XTACACS / TACACS+ / RADIUS / local / none) for authentication. These techniques will be listed in an order preferable, and defined by the user for normal user authentication on the Switch, and may contain up to eight authentication techniques. When a user attempts to access the Switch, the Switch will select the first technique listed for authentication. If the first technique goes through its server hosts and no authentication is returned, the Switch will then go to the next technique listed in the server group for authentication, until the authentication has been verified or denied, or the list is exhausted.

Please note that user granted access to the Switch will be granted normal user privileges on the Switch. To gain access to admin level privileges, the user must enter the enable admin command, which is only available for logging in the Switch from the three versions of the TACACS server, and then enter a password, which was previously configured by the administrator of the Switch.

NOTE: TACACS, XTACACS and TACACS+ are separate entities and are not compatible. The Switch and the server must be configured exactly the same, using the same protocol. (For example, if the Switch is set up for TACACS authentication, so must be the host server.)

The Access Authentication Control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.
<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>

<td>attempt &lt;int 1-255&gt;</td>
</tr>
<tr>
<td>show authen parameter</td>
<td></td>
</tr>
<tr>
<td>enable admin</td>
<td></td>
</tr>
<tr>
<td>config admin local_enable</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
**enable authen_policy**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable system access authentication policy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable authen_policy</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will enable an administrator-defined authentication policy for users trying to access the Switch. When enabled, the device will check the method list and choose a technique for user authentication upon login.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable the system access authentication policy:

```
DES-3528:5#enable authen_policy
Command: enable authen_policy
Success.
DES-3528:5#
```

**disable authen_policy**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable system access authentication policy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable authen_policy</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will disable the administrator-defined authentication policy for users trying to access the Switch. When disabled, the Switch will access the local user account database for username and password verification. In addition, the Switch will now accept the local enable password as the authentication for normal users attempting to access administrator level privileges.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the system access authentication policy:

```
DES-3528:5#disable authen_policy
Command: disable authen_policy
Success.
DES-3528:5#
```

**show authen_policy**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the system access authentication policy status on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show authen_policy</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will show the current status of the access authentication policy on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the system access authentication policy:

```
```

309
create authen_login method_list_name

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create a user defined method list of authentication methods for users logging on to the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>create authen_login method_list_name &lt;string 15&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to create a list for authentication techniques for user login. The Switch can support up to eight method lists, but one is reserved as a default and cannot be deleted. Multiple method lists must be created and configured separately.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;string 15&gt; – Enter an alphanumeric string of up to 15 characters to define the given method list.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To create the method list “Trinity.”:

DES-3528:5#create authen_login method_list_name Trinity
Command: create authen_login method_list_name Trinity
Success.
DES-3528:5#

config authen_login

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure a user-defined or default method list of authentication methods for user login.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config authen_login [default</td>
</tr>
<tr>
<td>Description</td>
<td>This command will configure a user-defined or default method list of authentication methods for users logging on to the Switch. The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like tacacs – xtacacs – local, the Switch will send an authentication request to the first tacacs host in the server group. If no response comes from the server host, the Switch will send an authentication request to the second tacacs host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, xtacacs. If no authentication takes place using the xtacacs list, the local account database set in the Switch is used to authenticate the user. When the local method is used, the privilege level will be dependant on the local account privilege configured on the Switch. Successful login using any of these methods will give the user a “user” privilege only. If the user wishes to upgrade his or her status to the administrator level, the user must implement the enable admin command, followed by a previously configured password. (See the enable admin part of this section for more detailed information, concerning the enable admin command.)</td>
</tr>
<tr>
<td>Parameters</td>
<td>default – The default method list for access authentication, as defined by the user. The user may choose one or a combination of up to four of the following authentication methods:</td>
</tr>
</tbody>
</table>
|                  |  - tacacs – Adding this parameter will require the user to be authenticated using the
**config authen_login**  

TACACS protocol from the remote TACACS server hosts of the TACACS server group list.

- **xtacacs** – Adding this parameter will require the user to be authenticated using the XTACACS protocol from the remote XTACACS server hosts of the XTACACS server group list.
- **tacacs+** – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from the remote TACACS+ server hosts of the TACACS+ server group list.
- **radius** – Adding this parameter will require the user to be authenticated using the RADIUS protocol from the remote RADIUS server hosts of the RADIUS server group list.
- **server_group <string 15>** – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- **local** – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- **none** – Adding this parameter will require no authentication to access the Switch.

**method_list_name** – Enter a previously implemented method list name defined by the user. The user may add one, or a combination of up to four of the following authentication methods to this method list:

- **tacacs** – Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.
- **xtacacs** – Adding this parameter will require the user to be authenticated using the XTACACS protocol from a remote XTACACS server.
- **tacacs+** – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.
- **radius** – Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server.
- **server_group <string 15>** – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- **local** – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- **none** – Adding this parameter will require no authentication to access the Switch.

**NOTE:** Entering none or local as an authentication protocol will override any other authentication that follows it on a method list or on the default method list.

**Restrictions**  

Only Administrator-level users can issue this command.

Example usage:

To configure the user defined method list “Trinity” with authentication methods TACACS, XTACACS and local.

```
DES-3528:5#config authen_login method_list_name Trinity method tacacs xtacacs local
Command: config authen_login method_list_name Trinity method tacacs xtacacs local
Success.
DES-3528:5#
```

Example usage:

To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3528:5#config authen_login method_list_name default method xtacacs tacacs+ local
Command: config authen_login method_list_name default method xtacacs tacacs+ local
Success.
DES-3528:5#
```
DES-3528:5#config authen_login default method xtacacs tacacs+ local
Command: config authen_login default method xtacacs tacacs+ local
Success.
DES-3528:5#

<table>
<thead>
<tr>
<th>delete authen_login method_list_name</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td>Used to delete a previously configured user defined method list of authentication methods for users logging on to the Switch.</td>
</tr>
<tr>
<td><strong>Syntax</strong></td>

</tr>
<tr>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete the method list name “Trinity”:

DES-3528:5#delete authen_login method_list_name Trinity
Command: delete authen_login method_list_name Trinity
Success.
DES-3528:5#
**show authen_login**

**Purpose**
Used to display a previously configured user defined method list of authentication methods for users logging on to the Switch.

**Syntax**
```
show authen_login [default | method_list_name <string 15> | all]
```

**Description**
This command is used to show a list of authentication methods for user login.

**Parameters**
- **default** – Entering this parameter will display the default method list for users logging on to the Switch.
- **method_list_name <string 15>** – Enter an alphanumeric string of up to 15 characters to define the given method list to view.
- **all** – Entering this parameter will display all the authentication login methods currently configured on the Switch.

The window will display the following parameters:
- **Method List Name** – The name of a previously configured method list name.
- **Priority** – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1 (highest) to 4 (lowest).
- **Method Name** – Defines which security protocols are implemented, per method list name.
- **Comment** – Defines the type of Method. *User-defined Group* refers to server group defined by the user. *Built-in Group* refers to the TACACS, XTACACS, TACACS+ and RADIUS security protocols which are permanently set in the Switch. *Keyword* refers to authentication using a technique INSTEAD of TACACS / XTACACS / TACACS+ / RADIUS which are local (authentication through the user account on the Switch) and none (no authentication necessary to access any function on the Switch).

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To view the authentication login method list named Trinity:

```
DES-3528:5#show authen_login method_list_name Trinity
Command: show authen_login method_list_name Trinity

<table>
<thead>
<tr>
<th>Method List Name</th>

</tr>
</tbody>
</table>

DES-3528:5#
```
### create authen_enable method_list_name

**Purpose**
Used to create a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax**
```
create authen_enable method_list_name <string 15>
```

**Description**
This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight enable method lists can be implemented on the Switch.

**Parameters**
- `<string 15>` – Enter an alphanumeric string of up to 15 characters to define the given enable method list to create.

**Restrictions**
Only Administrator-level users can issue this command.

#### Example usage:
To create a user-defined method list, named “Permit” for promoting user privileges to Administrator privileges:

```
DES-3528:5# create authen_enable method_list_name Permit
Command: create authen_enable method_list_name Permit
Success.
DES-3528:5#
```

### config authen_enable

**Purpose**
Used to configure a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax**
```
config authen_enable [default | method_list_name <string 15>] method {tacacs | xtacacs | tacacs+ | radius | server_group <string 15> | local_enable | none}(1)
```

**Description**
This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight enable method lists can be implemented simultaneously on the Switch.

The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like `tacacs – xtacacs – local_enable`, the Switch will send an authentication request to the first TACACS host in the server group. If no verification is found, the Switch will send an authentication request to the second TACACS host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, `xtacacs`. If no authentication takes place using the `xtacacs` list, the `local_enable` password set in the Switch is used to authenticate the user.

Successful authentication using any of these methods will give the user an “Admin” level privilege.

**Parameters**
- `default` – The default method list for administration rights authentication, as defined by the user. The user may choose one or a combination of up to four (4) of the following authentication methods:
  - `tacacs` – Adding this parameter will require the user to be authenticated using the TACACS protocol from the remote TACACS server hosts of the TACACS server group list.
  - `xtacacs` – Adding this parameter will require the user to be authenticated using the XTACACS protocol from the remote XTACACS server hosts of the XTACACS server group list.
  - `tacacs+` – Adding this parameter will require the user to be authenticated using the
### config authen_enable

**TACACS+ protocol from the remote TACACS+ server hosts of the TACACS+ server group list.**

- **radius** – Adding this parameter will require the user to be authenticated using the RADIUS protocol from the remote RADIUS server hosts of the RADIUS server group list.
- **server_group <string 15>** – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- **local_enable** – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- **none** – Adding this parameter will require no authentication to access the Switch.

**method_list_name** – Enter a previously implemented method list name defined by the user (create authen_enable). The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

- **tacacs** – Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.
- **xtacacs** – Adding this parameter will require the user to be authenticated using the XTACACS protocol from a remote XTACACS server.
- **tacacs+** – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.
- **radius** – Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server.
- **server_group <string 15>** – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- **local_enable** – Adding this parameter will require the user to be authenticated using the local user account database on the Switch. The local enable password of the device can be configured using the “config admin local_password” command.
- **none** – Adding this parameter will require no authentication to access the administration level privileges on the Switch.

**Restrictions**

Only Administrator-level users can issue this command.

---

**Example usage:**

To configure the user defined method list “Permit” with authentication methods TACACS, XTACACS and local.

```
DES-3528:5#config authen_enable method_list_name Trinity method tacacs xtacacs local
Command: config authen_enable method_list_name Trinity method tacacs xtacacs local
Success.
```

```
DES-3528:5#
```

**Example usage:**

To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3528:5#config authen_enable default method xtacacs tacacs+ local
Command: config authen_enable default method xtacacs tacacs+ local
Success.
```

```
DES-3528:5#
```
**delete authen_enable method_list_name**

**Purpose**
Used to delete a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax**
```
delete authen_enable method_list_name <string 15>
```

**Description**
This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.

**Parameters**

- `<string 15>` – Enter an alphanumeric string of up to 15 characters to define the given enable method list to delete.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To delete the user-defined method list “Permit”

```
DES-3528:5#delete authen_enable method_list_name Permit
Command: delete authen_enable method_list_name Permit
Success.
DES-3528:5#
```

**show authen_enable**

**Purpose**
Used to display the method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax**
```
show authen_enable [default | method_list_name <string 15> | all]
```

**Description**
This command is used to display a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.

**Parameters**

- `default` – Entering this parameter will display the default method list for users attempting to gain access to Administrator level privileges on the Switch.

- `method_list_name <string 15>` – Enter an alphanumeric string of up to 15 characters to define the given method list the user wishes to view.

- `all` – Entering this parameter will display all the authentication login methods currently configured on the Switch.

The window will display the following parameters:

- `Method List Name` – The name of a previously configured method list name.
- `Priority` – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1 (highest) to 4 (lowest).
- `Method Name` – Defines which security protocols are implemented, per method list name.
- `Comment` – Defines the type of Method. *User-defined Group* refers to *server groups* defined by the user. *Built-in Group* refers to the TACACS, XTACACS, TACACS+ and RADIUS security protocols which are permanently set in the Switch. *Keyword* refers to authentication using a technique INSTEAD of TACACS/XTACACS/TACACS+/RADIUS which are local (authentication through the local 
  `local_enable` password on the Switch) and none (no authentication necessary to access any function on the Switch).

**Restrictions**
None.

**Example usage:**
To display all method lists for promoting user level privileges to administrator level privileges.

```
```

316
DES-3528:5# show authen_enable all
Command: show authen_enable all

**config authen application**

**Purpose**
Used to configure various applications on the Switch for authentication using a previously configured method list.

**Syntax**
```
config authen application [console | telnet | ssh | http | all] [login | enable] [default | method_list_name <string 15>]
```

**Description**
This command is used to configure Switch configuration applications (console, telnet, ssh, web) for login at the user level and at the administration level (authen_enable) utilizing a previously configured method list.

**Parameters**
- **application** – Choose the application to configure. The user may choose one of the following five options to configure.
  - `console` – Choose this parameter to configure the command line interface login method.
  - `telnet` – Choose this parameter to configure the telnet login method.
  - `ssh` – Choose this parameter to configure the Secure Shell login method.
  - `http` – Choose this parameter to configure the web interface login method.
  - `all` – Choose this parameter to configure all applications (console, telnet, ssh, web) login method.
- **login** – Use this parameter to configure an application for normal login on the user level, using a previously configured method list.
- **enable** – Use this parameter to configure an application for upgrading a normal user level to administrator privileges, using a previously configured method list.
- **default** – Use this parameter to configure an application for user authentication using the default method list.
- **method_list_name <string 15>** – Use this parameter to configure an application for user authentication using a previously configured method list. Enter an alphanumeric string of up to 15 characters to define a previously configured method list.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To configure the default method list for the web interface:

DES-3528:5# config authen application http login default
Command: config authen application http login default
Success.

DES-3528:5#
show authen application

Purpose: Used to display authentication methods for the various applications on the Switch.

Syntax: `show authen application`

Description: This command will display all of the authentication method lists (login, enable administrator privileges) for Switch configuration applications (console, telnet, SSH, web) currently configured on the Switch.

Parameters: None.

Restrictions: None.

Example usage:

To display the login and enable method list for all applications on the Switch:

```
DES-3528:5#show authen application
Command: show authen application

<table>
<thead>
<tr>
<th>Application</th>
<th>Login Method List</th>
<th>Enable Method List</th>
</tr>
</thead>
<tbody>
<tr>

<td>default</td>
<td>default</td>
</tr>
<tr>
<td>HTTP</td>
<td>default</td>
<td>default</td>
</tr>
</tbody>
</table>

DES-3528:5#
```
create authen server_host

**Purpose**
Used to create an authentication server host.

**Syntax**
```
create authen server_host <ipaddr> protocol [tacacs | xtacacs | tacacs+ | radius] {port <int 1-65535> | key [<key_string 254> | none] | timeout <int 1-255> | retransmit <1-255>}
```

**Description**
This command will create an authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with authentication protocol enabled, the Switch will send authentication packets to a remote TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16.

**Parameters**
- **server_host <ipaddr>** – The IP address of the remote server host to add.
- **protocol** – The protocol used by the server host. The user may choose one of the following:
  - **tacacs** – Enter this parameter if the server host utilizes the TACACS protocol.
  - **xtacacs** – Enter this parameter if the server host utilizes the XTACACS protocol.
  - **tacacs+** – Enter this parameter if the server host utilizes the TACACS+ protocol.
  - **radius** – Enter this parameter if the server host utilizes the RADIUS protocol.
- **port <int 1-65535>** – Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.
- **key <key_string 254>** – Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters.
- **timeout <int 1-255>** – Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.
- **retransmit <int 1-255>** – Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To create a TACACS+ authentication server host, with port number 1234, a timeout value of 10 seconds and a retransmit count of 5.

```
DES-3528:5# create authen server_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5
Command: create authen server_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5
Success.
```

DES-3528:5#
### config authen server_host

**Purpose**
Used to configure a user-defined authentication server host.

**Syntax**
```
config authen server_host <ipaddr> protocol [tacacs | xtacacs | tacacs+ | radius] [port <int 1-65535> | key [<key_string 254> | none] | timeout <int 1-255> | retransmit < 1-255>](1)
```

**Description**
This command will configure a user-defined authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with the authentication protocol enabled, the Switch will send authentication packets to a remote TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16.

**Parameters**
- **server_host <ipaddr>** – The IP address of the remote server host the user wishes to alter.
- **protocol** – The protocol used by the server host. The user may choose one of the following:
  - **tacacs** – Enter this parameter if the server host utilizes the TACACS protocol.
  - **xtacacs** – Enter this parameter if the server host utilizes the XTACACS protocol.
  - **tacacs+** – Enter this parameter if the server host utilizes the TACACS+ protocol.
  - **radius** – Enter this parameter if the server host utilizes the RADIUS protocol.
- **port <int 1-65535>** – Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.
- **key <key_string 254>** – Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters or choose none.
- **timeout <int 1-255>** – Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.
- **retransmit <int 1-255>** – Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond. This field is inoperable for the TACACS+ protocol.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To configure a TACACS+ authentication server host, with port number 4321, a timeout value of 12 seconds and a retransmit count of 4.

```
DES-3528:5# config authen server_host 10.1.1.121 protocol tacacs+ port 4321 timeout 12 retransmit 4
Command: config authen server_host 10.1.1.121 protocol tacacs+ port 4321 timeout 12 retransmit 4
Success.

DES-3528:5#
```
### delete authen server_host

**Purpose**: Used to delete a user-defined authentication server host.

**Syntax**: `delete authen server_host <ipaddr> protocol [tacacs | xtacacs | tacacs+ | radius]`

**Description**: This command is used to delete a user-defined authentication server host previously created on the Switch.

**Parameters**
- `server_host <ipaddr>` – The IP address of the remote server host to be deleted.
- `protocol` – The protocol used by the server host the user wishes to delete. The user may choose one of the following:
  - `tacacs` – Enter this parameter if the server host utilizes the TACACS protocol.
  - `xtacacs` – Enter this parameter if the server host utilizes the XTACACS protocol.
  - `tacacs+` – Enter this parameter if the server host utilizes the TACACS+ protocol.
  - `radius` – Enter this parameter if the server host utilizes the RADIUS protocol.

**Restrictions**: Only Administrator-level users can issue this command.

Example usage:

To delete a user-defined TACACS+ authentication server host:

```
DES-3528:5#delete authen server_host 10.1.1.121 protocol tacacs+
Command: delete authen server_host 10.1.1.121 protocol tacacs+
Success.
DES-3528:5#
```

### show authen server_host

**Purpose**: Used to view a user-defined authentication server host.

**Syntax**: `show authen server_host`

**Description**: This command is used to view user-defined authentication server hosts previously created on the Switch.

The following parameters are displayed:
- **IP Address** – The IP address of the authentication server host.
- **Protocol** – The protocol used by the server host. Possible results will include TACACS, XTACACS, TACACS+ or RADIUS.
- **Port** – The virtual port number on the server host. The default value is 49.
- **Timeout** – The time in seconds the Switch will wait for the server host to reply to an authentication request.
- **Retransmit** – The value in the retransmit field denotes how many times the device will resend an authentication request when the TACACS server does not respond. This field is inoperable for the tacacs+ protocol.
- **Key** – Authentication key to be shared with a configured TACACS+ server only.

**Restrictions**: Only Administrator-level users can issue this command.

Example usage:

To view authentication server hosts currently set on the Switch:
**create authen server_group**

**Purpose**
Used to create a user-defined authentication server group.

**Syntax**
create authen server_group <string 15>

**Description**
This command will create an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may add up to eight authentication server hosts to this group using the `config authen server_group` command.

**Parameters**
<string 15> – Enter an alphanumeric string of up to 15 characters to define the newly created server group.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To create the server group “group_1”:

```
DES-3528:5# create authen server_group group_1
Command: create authen server_group group_1
Success.
DES-3528:5#
```
config authen server_group

Purpose
Used to configure a user-defined authentication server group.

Syntax
config authen server_group [tacacs | xtacacs | tacacs+ | radius | <string 15>] [add | delete] server_host <ipaddr> protocol [tacacs | xtacacs | tacacs+ | radius]

Description
This command will configure an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may define the type of server group by protocol or by previously defined server group. Up to eight authentication server hosts may be added to any particular group.

Parameters
- server_group – The user may define the group by protocol groups built into the Switch (TACACS/XTACACS/TACACS+/RADIUS), or by a user-defined group previously created using the create authen server_group command.
  - tacacs – Use this parameter to utilize the built-in TACACS server protocol on the Switch. Only server hosts utilizing the TACACS protocol may be added to this group.
  - xtacacs – Use this parameter to utilize the built-in XTACACS server protocol on the Switch. Only server hosts utilizing the XTACACS protocol may be added to this group.
  - tacacs+ – Use this parameter to utilize the built-in TACACS+ server protocol on the Switch. Only server hosts utilizing the TACACS+ protocol may be added to this group.
  - radius – Use this parameter to utilize the built-in RADIUS server protocol on the Switch. Only server hosts utilizing the RADIUS protocol may be added to this group.
  - <string 15> – Enter an alphanumeric string of up to 15 characters to define the previously created server group. This group may add any combination of server hosts to it, regardless of protocol.
- add/delete – Enter the correct parameter to add or delete a server host from a server group.
- server_host <ipaddr> – Enter the IP address of the previously configured server host to add or delete.
- protocol – Enter the protocol utilized by the server host. There are three options:
  - tacacs – Use this parameter to define the protocol if the server host is using the TACACS authentication protocol.
  - xtacacs – Use this parameter to define the protocol if the server host is using the XTACACS authentication protocol.
  - tacacs+ – Use this parameter to define the protocol if the server host is using the TACACS+ authentication protocol.
  - radius – Use this parameter to define the protocol if the server host is using the RADIUS authentication protocol.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To add an authentication host to server group “group_1”:

DES-3528:5# config authen server_group group_1 add server_host 10.1.1.121 protocol tacacs+
Command: config authen server_group group_1 add server_host 10.1.1.121 protocol tacacs+
Success.

DES-3528:5#
### delete authen server_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a user-defined authentication server group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>delete authen server_group &lt;string 15&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will delete an authentication server group.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;string 15&gt;</code> – Enter an alphanumeric string of up to 15 characters to define the previously created server group to be deleted.</td>
</tr>

Total Entries : 5

DES-3528:5#

---

**config authen parameter response_timeout**

**Purpose**: Used to configure the amount of time the Switch will wait for a user to enter authentication before timing out.

**Syntax**: `config authen parameter response_timeout <int 0-255>`

**Description**: This command will set the time the Switch will wait for a response of authentication from the user.

**Parameters**:
- `response_timeout <int 0-255>` – Set the time, in seconds, the Switch will wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface. Zero means there won't be a time-out. The default value is 0 seconds.

**Restrictions**: Only Administrator-level users can issue this command.

Example usage:

To configure the response timeout for 60 seconds:

DES-3528:5#config authen parameter response_timeout 60
Command: config authen parameter response_timeout 60

Success.

DES-3528:5#

---

**config authen parameter attempt**

**Purpose**: Used to configure the maximum number of times the Switch will accept authentication attempts.

**Syntax**: `config authen parameter attempt <int 1-255>`

**Description**: This command will configure the maximum number of times the Switch will accept authentication attempts. Users failing to be authenticated after the set amount of attempts will be denied access to the Switch and will be locked out of further authentication attempts. Command line interface users will have to wait 60 seconds before another authentication attempt. Telnet users will be disconnected from the Switch.

**Parameters**:
- `parameter attempt <int 1-255>` – Set the maximum number of attempts the user may try to become authenticated by the Switch, before being locked out. The default setting is 3.

**Restrictions**: Only Administrator-level users can issue this command.
Example usage:

To set the maximum number of authentication attempts at 5:

```
DES-3528:5#config authen parameter attempt 5
Command: config authen parameter attempt 5
Success.
DES-3528:5#
```

**show authen parameter**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the authentication parameters currently configured on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show authen parameter</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the authentication parameters currently configured on the Switch, including the response timeout and user authentication attempts.</td>
</tr>
<tr>
<td></td>
<td>This command will display the following fields:</td>
</tr>
<tr>
<td></td>
<td>Response timeout – The configured time allotted for the Switch to wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface.</td>
</tr>
<tr>
<td></td>
<td>User attempts: The maximum number of attempts the user may try to become authenticated by the Switch, before being locked out.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Parameters</th>
<th>None.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To view the authentication parameters currently set on the Switch:

```
DES-3528:5#show authen parameter
Command: show authen parameter
Response Timeout : 30 seconds
User Attempts    : 3
DES-3528:5#
```

**enable admin**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to promote user level privileges to administrator level privileges.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable admin</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is for users who have logged on to the Switch with the normal user privilege and can be switched to the admin privilege. After logging on to the Switch users will have only user level privileges. To gain access to administrator level privileges, the user will enter this command and will have to enter an authentication password. Possible authentication methods for this function include TACACS, XTACACS, TACACS+, RADIUS, user defined server groups, local enable (local account on the Switch), or no authentication (none). Because XTACACS and TACACS do not support the enable function, the user must create a special account on the server host which has the username “enable”, and a password configured by the administrator that will support the “enable” function. This function becomes inoperable when the authentication policy is disabled.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Parameters</th>
<th>None.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To enable administrator privileges on the Switch:
DES-3528:5#enable admin
Password: ******
DES-3528:5#

**config admin local_enable**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the local enable password for administrator level privileges.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config admin local_enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command will configure the locally enabled password for the enable admin command. When a user chooses the local_enable method to promote user level privileges to administrator privileges, he or she will be prompted to enter the password configured here that is set locally on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;password 15&gt; – After entering this command, the user will be prompted to enter the old password, then a new password in an alphanumeric string of no more than 15 characters, and finally prompted to enter the new password again for confirmation. See the example below.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the password for the “local_enable” authentication method.

DES-3528:5#config admin local_enable
Command: config admin local_enable

Enter the old password:
Enter the case-sensitive new password:******
Enter the new password again for confirmation:******
Success.

DES-3528:5#
The steps required to use the Secure Shell (SSH) protocol for secure communication between a remote PC (the SSH Client) and the Switch (the SSH Server), are as follows:

Create a user account with admin-level access using the create account admin <username> <password> command. This is identical to creating any other admin-level user account on the Switch, including specifying a password. This password is used to login to the Switch, once secure communication has been established using the SSH protocol.

Configure the user account to use a specified authorization method to identify users that are allowed to establish SSH connections with the Switch using the config ssh authmode command. There are three choices as to the method SSH will use to authorize the user, and they are password, publickey and hostbased.

Configure the encryption algorithm that SSH will use to encrypt and decrypt messages sent between the SSH Client and the SSH Server.

Finally, enable SSH on the Switch using the enable ssh command.

After following the above steps, users can configure an SSH Client on the remote PC and manage the Switch using secure, in-band communication.

The Secure Shell (SSH) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable ssh</td>
<td></td>
</tr>
<tr>
<td>disable ssh</td>
<td></td>
</tr>
<tr>
<td>config ssh authmode</td>
<td>[password</td>
</tr>
<tr>
<td>show ssh authmode</td>
<td></td>
</tr>
<tr>
<td>config ssh server</td>
<td>{maxsession &lt;int 1-8&gt;</td>
</tr>
<tr>
<td>show ssh server</td>
<td></td>
</tr>
<tr>
<td>config ssh user</td>
<td>&lt;username&gt; authmode [hostbased [hostname &lt;domain_name&gt;</td>
</tr>
<tr>
<td>show ssh user authmode</td>
<td></td>
</tr>
<tr>
<td>config ssh algorithm</td>
<td>[3DES</td>
</tr>
<tr>
<td>show ssh algorithm</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### enable ssh

**Purpose**

Used to enable SSH.

**Syntax**

enable ssh

**Description**

This command allows users to enable SSH on the Switch.

**Parameters**

None.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Usage example:**

To enable SSH:
enable ssh
Command: enable ssh

TELNET will be disabled when enable SSH.
Success.

DES-3528:5#

disable ssh
Purpose: Used to disable SSH.
Syntax: disable ssh
Description: This command allows users to disable SSH on the Switch.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Usage example:
To disable SSH:

DES-3528:5#disable ssh
Command: disable ssh
Success.
DES-3528:5#

config ssh authmode
Purpose: Used to configure the SSH authentication mode setting.
Syntax: config ssh authmode [password | publickey | hostbased] [enable | disable]
Description: This command will allow users to configure the SSH authentication mode for users attempting to access the Switch.
Parameters:
password – This parameter may be chosen if the administrator wishes to use a locally configured password for authentication on the Switch.
publickey – This parameter may be chosen if the administrator wishes to use a publickey configuration set on a SSH server, for authentication.
hostbased – This parameter may be chosen if the administrator wishes to use a host computer for authentication. This parameter is intended for Linux users requiring SSH authentication techniques and the host computer is running the Linux operating system with a SSH program previously installed.
[enable | disable] – This allows users to enable or disable SSH authentication on the Switch.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To enable the SSH authentication mode by password:

DES-3528:5#config ssh authmode password enable
Command: config ssh authmode password enable
Success.
DES-3528:5#
### show ssh authmode

**Purpose**
Used to display the SSH authentication mode setting.

**Syntax**
```
show ssh authmode
```

**Description**
This command will allow users to display the current SSH authentication set on the Switch.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To view the current authentication mode set on the Switch:

```
DES-3528:5#show ssh authmode
Command: show ssh authmode
The SSH Authmode:
-----------------------------------
Password    : Enabled
Publickey   : Enabled
Hostbased   : Enabled

DES-3528:5#
```

### config ssh server

**Purpose**
Used to configure the SSH server.

**Syntax**
```
config ssh server {maxsession <int 1-8> | contimeout <sec 120-600> | authfail <int 2-20> | rekey [10min | 30min | 60min | never] | port <tcp_port_number 1-65535>}(1)
```

**Description**
This command allows users to configure the SSH server.

**Parameters**
- `maxsession <int 1-8>` -- Allows the user to set the number of users that may simultaneously access the Switch. The default setting is 8.
- `contimeout <sec 120-600>` -- Allows the user to set the connection timeout. The user may set a time between 120 and 600 seconds. The default is 120 seconds.
- `authfail <int 2-20>` -- Allows the administrator to set the maximum number of attempts that a user may try to logon utilizing SSH authentication. After the maximum number of attempts is exceeded, the Switch will be disconnected and the user must reconnect to the Switch to attempt another login.
- `rekey [10min | 30min | 60min | never]` -- Sets the time period that the Switch will change the security shell encryptions.
- `port <tcp_port_number 1-65535>` -- Specifies the TCP port used to communicate between SSH client and server. The default value is 22.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Usage example:

To configure the SSH server:

```
DES-3528:5#config ssh server maxsession 2 contimeout 300 authfail 2
Command: config ssh server maxsession 2 contimeout 300 authfail 2
Success.

DES-3528:5#
```
show ssh server

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the SSH server setting.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show ssh server</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows users to display the current SSH server setting.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Usage example:

To display the SSH server:

```
DES-3528:5#show ssh server
Command: show ssh server

The SSH Server Configuration
Max Session            : 8
Connection Timeout     : 120
Authfail Attempts      : 2
Tcp Port Number        : 22
Rekey Timeout          : Never

DES-3528:5#
```

cfg ssh user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the SSH user.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config ssh user &lt;username 15&gt; authmode [hostbased [hostname &lt;domain_name&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows users to configure the SSH user authentication method.</td>
</tr>
</tbody>
</table>
| Parameters      | <username 15> – Enter a username of no more than 15 characters to identify the SSH user. authmode – Specifies the authentication mode of the SSH user wishing to log on to the Switch. The administrator may choose between:
  - hostbased – This parameter should be chosen if the user wishes to use a remote SSH server for authentication purposes. Choosing this parameter requires the user to input the following information to identify the SSH user.
    * hostname <domain_name> – Enter an alphanumeric string of up to 32 characters identifying the remote SSH user.
    * hostname_IP <domain_name> <ipaddr> – Enter the hostname and the corresponding IP address of the SSH user.
  - password – This parameter should be chosen to use an administrator defined password for authentication.
  - publickey – This parameter should be chosen to use the publickey on a SSH server for authentication. |
| Restrictions    | Only Administrator-level users can issue this command. |

Example usage:

To configure the SSH user:
DES-3528:5# config ssh user Trinity authmode password
Command: config ssh user Trinity authmode password
Success.
DES-3528:5#

table

### show ssh user authmode

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the SSH user setting.</th>

<tr>
<td>Description</td>
<td>This command allows users to display the current SSH user setting.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To display the SSH user:

DES-3528:5#show ssh user authmode
Command: show ssh user authmode

<table>
<thead>
<tr>
<th>Username</th>
<th>AuthMode</th>
<th>HostName</th>
<th>HostIP</th>
</tr>
</thead>
<tbody>
<tr>
<td>123</td>
<td>Password</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Total Entries : 1

DES-3528:5#

**NOTE:** To configure the SSH user, the administrator must create a user account on the Switch. For information concerning configuring a user account, please see the section of this manual entitled Basic Switch Commands and then the command, `create account`.  

*Image of pencil with note*
### config ssh algorithm

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the SSH algorithm.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config ssh algorithm [3DES</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows users to configure the desired type of SSH algorithm used for authentication encryption.</td>
</tr>
<tr>
<td>Parameters</td>
<td>3DES – This parameter will enable or disable the Triple Data Encryption Standard encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>AES128 – This parameter will enable or disable the Advanced Encryption Standard AES128 encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>AES192 – This parameter will enable or disable the Advanced Encryption Standard AES192 encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>AES256 – This parameter will enable or disable the Advanced Encryption Standard AES256 encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>arcfour – This parameter will enable or disable the Arcfour encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>blowfish – This parameter will enable or disable the Blowfish encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>cast128 – This parameter will enable or disable the Cast128 encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>twofish128 – This parameter will enable or disable the twofish128 encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>twofish192 – This parameter will enable or disable the twofish192 encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>MD5 – This parameter will enable or disable the MD5 Message Digest encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>SHA1 – This parameter will enable or disable the Secure Hash Algorithm encryption.</td>
</tr>
<tr>
<td></td>
<td>RSA – This parameter will enable or disable the RSA encryption algorithm.</td>
</tr>
<tr>
<td></td>
<td>DSA – This parameter will enable or disable the Digital Signature Algorithm encryption.</td>
</tr>
<tr>
<td>[enable</td>
<td>disable]</td>
</tr>
</tbody>
</table>

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Usage example:**

To configure SSH algorithm:

```
DES-3528:5#config ssh algorithm blowfish enable
Command: config ssh algorithm blowfish enable
Success.
```

**show ssh algorithm**

<table>
<thead>
<tr>
<th>Purpose</th>

DES-3528:5#
Secure Sockets Layer or SSL is a security feature that will provide a secure communication path between a host and client through the use of authentication, digital signatures and encryption. These security functions are implemented through the use of a ciphersuite, which is a security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session and consists of three levels:

1. **Key Exchange**: The first part of the ciphersuite string specifies the public key algorithm to be used. This Switch utilizes the Rivest Shamir Adleman (RSA) public key algorithm and the Digital Signature Algorithm (DSA), specified here as the DHE_DSS Diffie-Hellman (DHE) public key algorithm. This is the first authentication process between client and host as they “exchange keys” in looking for a match and therefore authentication to be accepted to negotiate encryptions on the following level.

2. **Encryption**: The second part of the ciphersuite includes the encryption used for encrypting the messages sent between client and host. The Switch supports two types of cryptology algorithms:
   - **Stream Ciphers** – There are two types of stream ciphers on the Switch, RC4 with 40-bit keys and RC4 with 128-bit keys. These keys are used to encrypt messages and need to be consistent between client and host for optimal use.
   - **CBC Block Ciphers** – CBC refers to Cipher Block Chaining, which means that a portion of the previously encrypted block of encrypted text is used in the encryption of the current block. The Switch supports the 3DES_EDE encryption code defined by the Data Encryption Standard (DES) to create the encrypted text.

3. **Hash Algorithm**: This part of the ciphersuite allows the user to choose a message digest function which will determine a Message Authentication Code. This Message Authentication Code will be encrypted with a sent message to provide integrity and prevent against replay attacks. The Switch supports two hash algorithms, MD5 (Message Digest 5) and SHA (Secure Hash Algorithm).

These three parameters are uniquely assembled in four choices on the Switch to create a three layered encryption code for secure communication between the server and the host. The user may implement any one or combination of the ciphersuites available, yet different ciphersuites will affect the security level and the performance of the secured connection. The information included in the ciphersuites is not included with the Switch and requires downloading from a third source in a file form called a certificate. This function of the Switch cannot be executed without the presence and implementation of the certificate file and can be downloaded to the Switch by utilizing a TFTP server. The Switch supports SSLv3 and TLSv1. Other versions of SSL may not be compatible with this Switch and may cause problems upon authentication and transfer of messages from client to host.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable ssl</td>
<td>{ciphersuite [RSA_with_RC4_128_MG5</td>
</tr>
<tr>
<td>disable ssl</td>
<td>{ciphersuite [RSA_with_RC4_128_MG5</td>
</tr>
<tr>
<td>config ssl cachetimeout</td>
<td>timeout &lt;value 60-86400&gt;</td>
</tr>
<tr>
<td>show ssl</td>
<td></td>
</tr>
<tr>
<td>show ssl certificate</td>
<td></td>
</tr>
<tr>
<td>show ssl cachetimeout</td>
<td></td>
</tr>
<tr>
<td>download ssl certificate</td>
<td>&lt;ipaddr&gt; certfilename &lt;path_filename 64&gt; keyfilename &lt;path_filename 64&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
enable ssl

**Purpose**

Used to enable the SSL function on the Switch.

**Syntax**

```
enable ssl {ciphersuite {RSA_with_RC4_128_MD5 | RSA_with_3DES_EDE_CBC_SHA | DHE_DSS_with_3DES_EDE_CBC_SHA | RSA_EXPORT_with_RC4_40_MD5}}
```

**Description**

This command will enable SSL on the Switch by implementing any one or combination of listed ciphersuites on the Switch. Entering this command without a parameter will enable the SSL status on the Switch. Enabling SSL will disable the web-manager on the Switch.

**Parameters**

- **ciphersuite** – A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:
  - `RSA_with_RC4_128_MD5` – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.
  - `RSA_with_3DES_EDE_CBC_SHA` – This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.
  - `DHE_DSS_with_3DES_EDE_CBC_SHA` – This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.
  - `RSA_EXPORT_with_RC4_40_MD5` – This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys.

The ciphersuites are enabled by default on the Switch, yet the SSL status is disabled by default. Enabling SSL with a ciphersuite will not enable the SSL status on the Switch.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

To enable SSL on the Switch for all ciphersuites:

```
DES-3528:5#enable ssl
Command: enable ssl

Note: Web will be disabled if SSL is enabled.
Success.

DES-3528:5#
```

**NOTE:** Enabling SSL on the Switch will enable all ciphersuites. To utilize a particular ciphersuite, the user must eliminate other ciphersuites by using the `disable ssl` command along with the appropriate ciphersuites.

**NOTE:** Enabling the SSL function on the Switch will disable the port for the web manager (port 80). To log on to the web based manager, the entry of the URL must begin with `https://` (ex. https://10.90.90.90)
### disable ssl

**Purpose**
Used to disable the SSL function on the Switch.

**Syntax**
```
disable ssl [ciphersuite {RSA_with_RC4_128_MD5 | RSA_with_3DES_EDE_CBC_SHA | DHE_DSS_with_3DES_EDE_CBC_SHA | RSA_EXPORT_with_RC4_40_MD5}]
```

**Description**
This command will disable SSL on the Switch and can be used to disable any one or combination of listed ciphersuites on the Switch.

**Parameters**
- **ciphersuite**– A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:
  - `RSA_with_RC4_128_MD5` – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.
  - `RSA_with_3DES_EDE_CBC_SHA` – This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.
  - `DHE_DSS_with_3DES_EDE_CBC_SHA` – This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.
  - `RSA_EXPORT_with_RC4_40_MD5` – This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To disable the SSL status on the Switch:

```
DES-3528:5#disable ssl
Command: disable ssl
Success.
DES-3528:5#
```

To disable ciphersuite `RSA_EXPORT_with_RC4_40_MD5` only:

```
DES-3528:5#disable ssl ciphersuite RSA_EXPORT_with_RC4_40_MD5
Command: disable ssl ciphersuite RSA_EXPORT_with_RC4_40_MD5
Success.
DES-3528:5#
```

### config ssl cachetimeout

**Purpose**
Used to configure the SSL cache timeout.

**Syntax**
```
config ssl cachetimeout timeout <value 60-86400>
```

**Description**
This command will set the time between a new key exchange between a client and a host using the SSL function. A new SSL session is established every time the client and host go through a key exchange. Specifying a longer timeout will allow the SSL session to reuse the master key on future connections with that particular host, therefore speeding up the negotiation process.

**Parameters**
- **timeout <value 60-86400>** – Enter a timeout value between 60 and 86400 seconds to specify the total time an SSL key exchange ID stays valid before the SSL module will require a new, full SSL negotiation for connection. The default cache timeout is 600 seconds

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To configure the SSL cache timeout:

```
DES-3528:5#config ssl cachetimeout timeout 300
Command: config ssl cachetimeout timeout 300
Success.
DES-3528:5#
```
To set the SSL cachetimeout for 7200 seconds:

```
DES-3528:5#config ssl cachetimeout 7200
Command: config ssl cachetimeout 7200
Success.
DES-3528:5#
```

### show ssl cachetimeout

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the SSL cache timeout.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show ssl cachetimeout</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the user to view the SSL cache timeout currently implemented on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To view the SSL cache timeout on the Switch:

```
DES-3528:5#show ssl cachetimeout
Command: show ssl cachetimeout
Cache timeout is 600 second(s).
DES-3528:5#
```

### show ssl

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to view the SSL status and the certificate file status on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show ssl</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to view the SSL status on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To view the SSL status on the Switch:

```
DES-3528:5#show ssl
Command: show ssl

SSL status            Enabled
RSA_WITH_RC4_128_MD5   Enabled
RSA_WITH_3DES_EDE_CBC_SHA Enabled
DHE_DSS_WITH_3DES_EDE_CBC_SHA Enabled
RSA_EXPORT_WITH_RC4_40_MD5 Enabled

DES-3528:5#
```
### show ssl certificate

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to view the SSL certificate file status on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show ssl certificate</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to view the SSL certificate file information currently implemented on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To view certificate file information on the Switch:

```
DES-3528:5# show ssl certificate
Command: show ssl certificate

Loaded with RSA Certificate!

DES-3528:5#
```

### download ssl certificate

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to download a certificate file for the SSL function on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>download ssl certificate &lt;ipaddr&gt; certfilename &lt;path_filename 64&gt; keyfilename &lt;path_filename 64&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to download a certificate file for the SSL function on the Switch from a TFTP server. The certificate file is a data record used for authenticating devices on the network. It contains information about the owner, keys for authentication and digital signatures. Both the server and the client must have consistent certificate files for optimal use of the SSL function. The Switch only supports certificate files with .der file extensions.</td>
</tr>
</tbody>
</table>
| Parameters           | - `<ipaddr>` – Enter the IP address of the TFTP server.  
                        - `certfilename <path_filename 64>` – Enter the path and the filename of the certificate file users wish to download.  
                        - `keyfilename <path_filename 64>` – Enter the path and the filename of the key exchange file users wish to download.  
                        - `path_filename` – Private key file path respect to tftp server root path, and input characters max to 64 octets. |
| Restrictions         | Only Administrator-level users can issue this command. |

**Example usage:**

To download a certificate file and key file to the Switch:

```
DES-3528:5#DES-3528:5# download ssl certificate 10.55.47.1 certfilename cert.der keyfilename pkey.der
Command: download ssl certificate 10.55.47.1 certfilename cert.der keyfilename pkey.der

Success.

DES-3528:5#
```
D-LINK SINGLE IP MANAGEMENT COMMANDS

Simply put, D-Link Single IP Management is a concept that will stack switches together over Ethernet instead of using stacking ports or modules. Switches using D-Link Single IP Management (labeled here as SIM) must conform to the following rules:

SIM is an optional feature on the Switch and can easily be enabled or disabled. SIM grouping has no effect on the normal operation of the Switch in the user’s network.

There are three classifications for switches using SIM. The Commander Switch (CS), which is the master switch of the group, Member Switch (MS), which is a switch that is recognized by the CS a member of a SIM group, and a Candidate Switch (CaS), which is a switch that has a physical link to the SIM group but has not been recognized by the CS as a member of the SIM group.

A SIM group can only have one Commander Switch (CS).

All switches in a particular SIM group must be in the same IP subnet (broadcast domain). Members of a SIM group cannot cross a router.

A SIM group accepts one Commander Switch (numbered 0) and up to 32 switches (numbered 0-31).

There is no limit to the number of SIM groups in the same IP subnet (broadcast domain), however a single switch can only belong to one group.

If multiple VLANs are configured, the SIM group will only utilize the default VLAN on any switch.

SIM allows intermediate devices that do not support SIM. This enables the user to manage a switch that are more than one hop away from the CS.

The SIM group is a group of switches that are managed as a single entity. The DES-3528 may take on three different roles:

Commander Switch (CS) – This is a switch that has been manually configured as the controlling device for a group, and takes on the following characteristics:
- It has an IP Address.
- It is not a Commander Switch or Member Switch of another Single IP group.
- It is connected to the Member Switches through its management VLAN.

Member Switch (MS) – This is a switch that has joined a single IP group and is accessible from the CS, and it takes on the following characteristics:
- It is not a CS or MS of another IP group.
- It is connected to the CS through the CS management VLAN.

Candidate Switch (CaS) – This is a switch that is ready to join a SIM group but is not yet a member of the SIM group. The Candidate Switch may join the SIM group through an automatic function of the DES-3528, or by manually configuring it to be a MS of a SIM group. A switch configured as a CaS is not a member of a SIM group and will take on the following characteristics:
- It is not a CS or MS of another Single IP group.
- It is connected to the CS through the CS management VLAN.

The following rules also apply to the above roles:
1. Each device begins in the Commander state.
2. CS’s must change their role to CaS and then to MS, to become a MS of a SIM group. Thus the CS cannot directly be converted to a MS.
3. The user can manually configure a CS to become a CaS.
4. A MS can become a CaS by:
   a. Being configured as a CaS through the CS.
   b. If report packets from the CS to the MS time out.
5. The user can manually configure a CaS to become a CS
6. The CaS can be configured through the CS to become a MS.

After configuring one switch to operate as the CS of a SIM group, additional DES-3528 switches may join the group by either an automatic method or by manually configuring the Switch to be a MS. The CS will then serve as the in band entry point for access to the MS. The CS’s IP address will become the path to all MS’s of the group and the CS’s Administrator’s password, and/or authentication will control access to all MS’s of the SIM group.

With SIM enabled, the applications in the CS will redirect the packet instead of executing the packets. The applications will decode the packet from the administrator, modify some data, then send it to the MS. After execution, the CS may receive a response packet from the MS, which it will encode and send back to the administrator.
When a CS becomes a MS, it automatically becomes a member of the first SNMP community (include read/write and read only) to which the CS belongs. However if a MS has its own IP address, it can belong to SNMP communities to which other switches in the group, including the CS, do not belong.

The Upgrade to v1.6

To better improve SIM management, the xStack DES-3528 switch has been upgraded to version 1.6 in this release. Many improvements have been made, including:

The Commander Switch (CS) now has the capability to automatically rediscover member switches that have left the SIM group, either through a reboot or web malfunction. This feature is accomplished through the use of Discover packets and Maintain packets that previously set SIM members will emit after a reboot. Once a MS has had its MAC address and password saved to the CS’s database, if a reboot occurs in the MS, the CS will keep this MS information in its database and when a MS has been rediscovered, it will add the MS back into the SIM tree automatically. No configuration will be necessary to rediscover these switches. There are some instances where pre-saved MS switches cannot be rediscovered. For example, if the Switch is still powered down, if it has become the member of another group, or if it has been configured to be a Commander Switch, the rediscovery process cannot occur.

This version will support multiple switch upload and downloads for firmware, configuration files and log files, as follows:

- **Firmware** – The switch now supports multiple MS firmware downloads from a TFTP server.
- **Configuration Files** – This switch now supports multiple downloading and uploading of configuration files both to (for configuration restoration) and from (for configuration backup) MS’s, using a TFTP server.
- **Log** – The switch now supports uploading multiple MS log files to a TFTP server.

**NOTE:** For more details regarding improvements made in SIMv1.6, please refer to the White Paper located on the D-Link website.

The SIM commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable sim</td>
<td></td>
</tr>
<tr>
<td>disable sim</td>
<td></td>
</tr>
<tr>
<td>show sim</td>
<td>{[candidates {&lt;candidate_id 1-100&gt;}</td>
</tr>
<tr>
<td>reconfig</td>
<td>[member_id &lt;value 1-32&gt;</td>
</tr>
<tr>
<td>config sim_group</td>
<td>[add &lt;candidate_id 1-100&gt; {&lt;password&gt;}</td>
</tr>
<tr>
<td>config sim</td>
<td>{[commander { group_name &lt;groupname 64&gt;}</td>
</tr>
<tr>
<td>download sim_ms</td>
<td>[firmware_from_tftp</td>
</tr>
<tr>
<td>upload sim_ms</td>
<td>[configuration_to_tftp</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable sim**

**Purpose**

Used to enable Single IP Management (SIM) on the Switch

**Syntax**

enable sim

**Description**

This command will enable SIM globally on the Switch. SIM features and functions will not function properly unless this function is enabled.

**Parameters**

None.

**Restrictions**

Only Administrator-level users can issue this command.
Example usage:

To enable SIM on the Switch:

```
DES-3528:5#enable sim
Command: enable sim
Success.
DES-3528:5#
```

**disable sim**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable Single IP Management (SIM) on the Switch</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable sim</td>
</tr>
<tr>
<td>Description</td>
<td>This command will disable SIM globally on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable SIM on the Switch:

```
DES-3528:5#disable sim
Command: disable sim
Success.
DES-3528:5#
```
show sim

**Purpose**
Used to view the current information regarding the SIM group on the Switch.

**Syntax**
```
show sim {candidates {<candidate_id 1-100>} | members {<member_id 1-32>} | group {commander_mac <macaddr>} | neighbor}
```

**Description**
This command will display the current information regarding the SIM group on the Switch, including the following:

- **SIM Version** – Displays the current Single IP Management version on the Switch.
- **Firmware Version** – Displays the current Firmware version on the Switch.
- **Device Name** – Displays the user-defined device name on the Switch.
- **MAC Address** – Displays the MAC Address of the Switch.
- **Capabilities** – Displays the type of switch, be it Layer 2 (L2) or Layer 3 (L3).
- **Platform** – Switch Description including name and model number.
- **SIM State** – Displays the current Single IP Management State of the Switch, whether it be enabled or disabled.
- **Role State** – Displays the current role the Switch is taking, including Commander, Member or Candidate. A Stand-alone switch will always have the commander role.
- **Discovery Interval** – Time in seconds the Switch will send discovery packets out over the network.
- **Hold Time** – Displays the time in seconds the Switch will hold discovery results before dropping it or utilizing it.

**Parameters**
- **candidates <candidate_id 1-100>** – Entering this parameter will display information concerning candidates of the SIM group. To view a specific candidate, include that candidate’s ID number, listed from 1 to 100.
- **members <member_id 1-32>** – Entering this parameter will display information concerning members of the SIM group. To view a specific member, include that member’s id number, listed from 1 to 32.
- **group {commander_mac <macaddr>}** – Entering this parameter will display information concerning the SIM group. To view a specific group, include the commander’s MAC address of the group.
- **neighbor** – Entering this parameter will display neighboring devices of the Switch. A SIM neighbor is defined as a switch that is physically connected to the Switch but is not part of the SIM group. This screen will produce the following results:
  - **Port** – Displays the physical port number of the commander switch where the uplink to the neighbor switch is located.
  - **MAC Address** – Displays the MAC Address of the neighbor switch.
  - **Role** – Displays the role (CS, CaS, MS) of the neighbor switch.

**Restrictions**
None.

Example usage:

To show the SIM information in detail:
DES-3528:5# show sim
Command: show sim

<table>
<thead>
<tr>
<th>SIM Version</th>
<th>Firmwared Version</th>
<th>Device Name</th>
<th>MAC Address</th>

**DES-3528:5#**

---

**reconfig**

**Purpose**

Used to connect to a member switch, through the commander switch, using Telnet.

**Syntax**

`reconfig [member_id <value 1-32> | exit]`

**Description**

This command is used to reconnect to a member switch using Telnet.

**Parameters**

`member_id <value 1-32>` – Select the ID number of the member switch to configure.

`exit` – This command is used to exit from managing the member switch and will return to managing the commander switch.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

To connect to the MS, with member ID 2, through the CS, using the command line interface:

```
reconfig
```
```
DES-3528:5#reconfig member_id 2
Command: reconfig member_id 2

DES-3528:5#
Login:

**config sim_group**

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to add candidates and delete members from the SIM group.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td>`config sim_group [add &lt;candidate_id 1-100&gt; {&lt;password&gt;}</td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is used to add candidates and delete members from the SIM group by ID number.</td>
</tr>
</tbody>
</table>
| **Parameters** | `add <candidate_id> <password>` – Use this parameter to change a candidate switch (CaS) to a member switch (MS) of a SIM group. The CaS may be defined by its ID number and a password (if necessary).
`delete <member_id 1-32>` – Use this parameter to delete a member switch of a SIM group. The member switch should be defined by ID number. |
| **Restrictions** | Only Administrator-level users can issue this command. |

Example usage:

To add a member:

```
DES-3528:5#config sim_group add 2
Command: config sim_group add 2

Please wait for ACK!!!
SIM Config Success !!!

Success.
```

To delete a member:

```
DES-3528:5#config sim delete 1
Command: config sim delete 1

Please wait for ACK!!!
SIM Config Success!!!
```
```
config sim

Purpose
Used to configure role parameters for the SIM protocol on the Switch.

Syntax
config sim [{[commander {group_name <groupname 64> | candidate] | dp_interval <30-90> | hold_time <sec 100-255>}]}

Description
This command is used to configure parameters of switches of the SIM.

Parameters
- commander – Use this parameter to configure the commander switch (CS) for the following parameters:
  - group_name <groupname 64> – Used to update the name of the group. Enter an alphanumeric string of up to 64 characters to rename the SIM group.
  - dp_interval <30-90> – The user may set the discovery protocol interval, in seconds that the Switch will send out discovery packets. Returning information to the CS will include information about other switches connected to it. (Ex. MS, CaS). The user may set the dp_interval from 30 to 90 seconds.
  - hold time <sec 100-300> – Using this parameter, the user may set the time, in seconds, the CS will hold information sent to it from other switches, utilizing the discovery interval protocol. The user may set the hold time from 100 to 300 seconds.
- candidate – Used to change the role of a CS (commander) to a CaS (candidate).
  - dp_interval <30-90> – The user may set the discovery protocol interval, in seconds that the Switch will send out discovery packets. Returning information to the CS will include information about other switches connected to it. (Ex. MS, CaS). The user may set the dp_interval from 30 to 90 seconds.
  - hold_time <100-255> – Using this parameter, the user may set the time, in seconds, the Switch will hold information sent to it from other switches, utilizing the discovery interval protocol. The user may set the hold time from 100 to 255 seconds.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To change the time interval of the discovery protocol:

```
DES-3528:5#config sim commander dp_interval 30
Command: config sim commander dp_interval 30
Success.
DES-3528:5#
```

To change the hold time of the discovery protocol:

```
DES-3528:5#config sim commander hold_time 120
Command: config sim commander hold_time 120
Success.
DES-3528:5#
```

To transfer the CS (commander) to be a CaS (candidate):

```
DES-3528:5#config sim candidate
Command: config sim candidate
Success.
DES-3528:5#
```
To transfer the Switch to be a CS:

```plaintext
DES-3528:5#config sim commander
Command: config sim commander
Success.
DES-3528:5#
```

To update the name of a group:

```plaintext
DES-3528:5#config sim commander group_name Trinity
Command: config sim commander group_name Trinity
Success.
DES-3528:5#
```

download sim_ms

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to download firmware or configuration file to an indicated device.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`download sim_ms [firmware_from_tftp</td>
</tr>
<tr>
<td>Description</td>
<td>This command will download a firmware file or configuration file to a specified device from a TFTP server.</td>
</tr>
</tbody>
</table>
| Parameters | `firmware_from_tftp` – Specify this parameter to download firmware to members of a SIM group.  
`configuration_from_tftp` – Specify this parameter to download a switch configuration to members of a SIM group.  
`<ipaddr>` – Enter the IP address of the TFTP server.  
`<path_filename>` – Enter the path and the filename of the firmware or switch on the TFTP server.  
`members` – Enter this parameter to specify the members to which the user prefers to download firmware or switch configuration files. The user may specify a member or members by adding one of the following:  
  - `<mslist>` – Enter a value, or values to specify which members of the SIM group will receive the firmware or switch configuration.  
  - `all` – Add this parameter to specify all members of the SIM group will receive the firmware or switch configuration. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To download firmware:
DES-3528:5#download sim_ms firmware_from_tftp 10.53.13.94 c:/des3526.had members all
Command: download sim_ms firmware_from_tftp 10.53.13.94 c:/des3526.had members all
This device is updating firmware. Please wait...

<tr>
<th>Purpose</th>
<th>User to upload a configuration file to a TFTP server from a specified member of a SIM group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>upload sim_ms [configuration_to_tftp</td>
</tr>
<tr>
<td>Description</td>
<td>This command will upload a configuration file to a TFTP server from a specified member of a SIM group.</td>
</tr>
<tr>
<td>Parameters</td>
<td>configuration_from_tftp – Specify this parameter to upload a switch configuration to members of a SIM group.</td>
</tr>
<tr>
<td></td>
<td>log_to_tftp – Specify this parameter to upload a switch log to a member of the SIM group.</td>
</tr>
<tr>
<td></td>
<td>&lt;ipaddr&gt; – Enter the IP address of the TFTP server to which to upload a configuration file.</td>
</tr>
<tr>
<td></td>
<td>&lt;path_filename&gt; – Enter a user-defined path and file name on the TFTP server so as to upload configuration files.</td>
</tr>
<tr>
<td></td>
<td>members – Enter this parameter to specify the members to which the user prefers to upload the switch configuration or log files. The user may specify a member or members by adding one of the following:</td>
</tr>
<tr>
<td></td>
<td>&lt;mslist&gt; – Enter a value, or values to specify which members of the SIM group will upload the switch configuration or log.</td>
</tr>
<tr>
<td></td>
<td>all – Add this parameter to specify all members of the SIM group will upload the switch configuration or log.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To upload configuration files to a TFTP server:
DES-3528:5#upload sim_ms configuration_to_tftp 10.55.47.1 D:\configuration.txt members 1
Command: upload sim_ms configuration_to_tftp 10.55.47.1 D:\configuration.txt members
1
Success.

</tbody>
</table>
### enable jwac

**Purpose**
Used to enable JWAC function.

**Syntax**
`enable jwac`

**Description**
This command is used to enable JWAC function. JWAC and WAC are mutual exclusive functions. They cannot be enabled at the same time. Using the JWAC function, PC users need to pass two stages of authentication. The first stage is to do the authentication with the Quarantine Server and the second stage is the authentication with the switch. For the second stage, the authentication is similar to WAC, except that there is no port VLAN membership change by JWAC after a host passes authentication. The RADIUS server will share the server configuration defined by the 802.1X command set.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
```
To enable JWAC:

DES-3528:5#enable jwac
Command: enable jwac
Success.

DES-3528:5#
```

### disable jwac

**Purpose**
Used to disable JWAC function.

**Syntax**
`disable jwac`

**Description**
This command is used to disable JWAC function.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
```
To disable JWAC:

DES-3528:5#disable jwac
Command: disable jwac
Success.

DES-3528:5#
```
### enable jwac redirect

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to enable JWAC redirect function.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td><code>enable jwac redirect</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command is for the unauthenticated host to be redirected to the Quarantine Server when it tries to access a random URL, or JWAC login page in the Switch.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td>None.</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>When enabling redirect to quarantine server, a quarantine server must be configured first. Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**
To enable JWAC redirect:

```
DES-3528:5#enable jwac redirect
Command: enable jwac redirect
Success.
DES-3528:5#
```

### disable jwac redirect

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to disable JWAC redirect function.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td><code>disable jwac redirect</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command only allows an unauthenticated host access to the quarantine server and the JWAC login page, all other web access will be denied.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td>None.</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**
To disable JWAC redirect:

```
DES-3528:5#disable jwac redirect
Command: disable jwac redirect
Success.
DES-3528:5#
```
enable jwac forcible_logout

Purpose: Used to enable JWAC Forcible Logout function.
Syntax: `enable jwac forcible_logout`
Description: This command allows a Ping packet with TTL=1 from an authenticated host to be regarded as a logout request by the JWAC enabled switch. As a result, the host will be moved back to an unauthenticated state.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To enable JWAC forcible_logout:

```
DES-3528:5#enable jwac forcible_logout
Command: enable jwac forcible_logout
Success.
DES-3528:5#
```

disable jwac forcible_logout

Purpose: Used to disable JWAC forcible logout function.
Syntax: `disable jwac forcible_logout`
Description: This command is used to disable JWAC forcible logout function.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To disable JWAC forcible_logout:

```
DES-3528:5#disable jwac forcible_logout
Command: disable jwac forcible_logout
Success.
DES-3528:5#
```

enable jwac udp filtering function

Purpose: Used to enable JWAC UDP filtering function.
Syntax: `enable jwac udp_filtering`
Description: This command is used to drop all UDP and ICMP packets, except DHCP and DNS packets, from unauthenticated hosts.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:

To enable JWAC udp_filtering:

```
 DES-3528:5#enable jwac udp_filtering
 Command: enable jwac udp_filtering
 Success.
 DES-3528:5#
```
### disable jwac udp filtering function

**Purpose**
Used to disable JWAC UDP filtering function.

**Syntax**
disable jwac udp_filtering

**Description**
This command is used to disable JWAC UDP filtering function.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To disable JWAC udp_filtering:

```
DES-3528:5#disable jwac udp_filtering
Command: disable jwac udp_filtering
Success.
DES-3528:5#
```

### enable jwac quarantine_server_monitor

**Purpose**
Used to enable JWAC quarantine server monitor.

**Syntax**
enable jwac quarantine_server_monitor

**Description**
This command is for the JWAC switch to monitor the quarantine server ensuring that the server is okay. If the Switch does not detect any quarantine server, it will redirect all unauthenticated HTTP accesses to the JWAC Login Page when the redirect is enabled and the destination is configured as quarantine server.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To enable JWAC quarantine server monitor:

```
DES-3528:5#enable jwac quarantine_server_monitor
Command: enable jwac quarantine_server_monitor
Success.
DES-3528:5#
```
**disable jwac quarantine_server_monitor**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable JWAC quarantine server monitor.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable jwac quarantine_server_monitor</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable JWAC quarantine server monitor.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable JWAC quarantine server monitor:

```
DES-3528:5#disable jwac quarantine_server_monitor
Command: disable jwac quarantine_server_monitor
Success.
DES-3528:5
```

**config jwac quarantine_server_error_timeout**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to set Quarantine Server error timeout.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config jwac quarantine_server_error_timeout &lt;sec 5-300&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>When the Quarantine Server monitor is enabled, the JWAC Switch will periodically check if the Quarantine works okay. If the Switch does not receive any response from Quarantine Server during the configured error timeout, the Switch then regards it as not working properly.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;sec 5-300&gt;</code> – To specify the error timeout interval</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure JWAC quarantine server error timeout:

```
DES-3528:5#config jwac quarantine_server_error_timeout 60
Command: config jwac quarantine_server_error_timeout 60
Success.
DES-3528:5#
```
### config jwac redirect

**Purpose**  
Used to configure redirect destination and delay time before an unauthenticated host is redirected to the Quarantine Server or the JWAC login web page.

**Syntax**  
```
config jwac redirect {destination [quarantine_server | jwac_login_page] | delay_time <value 0-10>}
```

**Description**  
This command allows you to configure redirect destination and delay time before an unauthenticated host is redirected to the Quarantine Server or the JWAC login web page. The unit of delay time is seconds. 0 means no delaying the redirect.

**Parameters**  
- **destination** – To specify the destination which the unauthenticated host will be redirected to.
- **delay_time** – To specify the time interval after which the unauthenticated host will be redirected.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure JWAC redirect:

```
DES-3528:5# config jwac redirect destination jwac_login_page delay_time 5
Command: config jwac redirect destination jwac_login_page delay_time 5
Success.
DES-3528:5#
```

### config jwac virtual_ip

**Purpose**  
Used to configure JWAC virtual IP address used to accept authentication requests from an unauthenticated host.

**Syntax**  
```
config jwac virtual_ip <ipaddr>
```

**Description**  
The virtual IP of JWAC is used to accept authentication requests from unauthenticated hosts. Only requests sent to this IP will get a correct response. This IP does not respond to ARP requests or ICMP packets! Do not set this IP as the same subnet of the client PC and do not set its IP to the same as another device, otherwise the client PC cannot access the device.

**Parameters**  
- `<ipaddr>` – To specify the IP address of the virtual IP.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure JWAC virtual IP:

```
DES-3528:5# config jwac virtual_ip 1.1.1.1
Command: config jwac virtual_ip 1.1.1.1
Success.
DES-3528:5#
```
**config jwac quarantine_server_url**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure JWAC Quarantine Server URL</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config jwac quarantine_server_url &lt;string 128&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to configure the URL of the Quarantine Server. If the redirect is enabled and the redirect destination is the Quarantine Server, when an HTTP request from unauthenticated host not to the Quarantine Server reaches the JWAC Switch, the Switch will handle this HTTP packet and send back a message to the host to make it access the Quarantine Server with the configured URL. When the PC connects to the specified URL, the quarantine server will request the PC user to input the user name and password to do authentication.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;string 128&gt; – To specify the entire URL of authentication page on Quarantine Server</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure JWAC quarantine server URL:

```
DES-3528:5#config jwac quarantine_server_url http://10.90.90.88/authpage.html
Command: config jwac quarantine_server_url http://10.90.90.88/authpage.html
Success.
DES-3528:5#
```

**NOTE:** If the quarantine server is linked to the JWAC enabled port on the switch, it must be added to the static FDB correctly before it can work properly.

**config jwac clear_quarantine_server_url**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to clear Quarantine Server configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config jwac clear_quarantine_server_url</td>
</tr>
<tr>
<td>Description</td>
<td>This command will clear Quarantine Server configuration</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>When JWAC is enabled and the redirect destination is the Quarantine Server, the Quarantine Server cannot be cleared. Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure JWAC clear quarantine server URL:

```
DES-3528:5#config jwac clear_quarantine_server_url
Command: config jwac clear_quarantine_server_url
Success.
DES-3528:5#
```
### `config jwac update_server`

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>Used to configure the servers that PC may need to connect to in order to complete the JWAC authentication</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Syntax</strong></td>
<td>`config jwac update_server [add</td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command allows you to add or delete server network addresses to which the traffic from unauthenticated client hosts will not be blocked by the JWAC Switch. Any servers the ActiveX needs to access to accomplish the authentication before the client passes the authentication should be added to the Switch with its IP address. For example, the client may need to access update.microsoft.com or some sites of the Anti-Virus software companies to check whether the OS or Anti-Virus software of the client is up-to-date; and so IP addresses of update.microsoft.com and of Anti-Virus software companies are needed to be added to the Switch.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td><strong>add</strong> – To add a network address to which the traffic will not be blocked</td>
</tr>
<tr>
<td></td>
<td>You can add five network addresses at the most</td>
</tr>
<tr>
<td></td>
<td><strong>delete</strong> – To delete a network address to which the traffic will not be blocked</td>
</tr>
<tr>
<td></td>
<td><strong>ipaddress</strong> – To specify the network address to add or delete</td>
</tr>
<tr>
<td></td>
<td>To set a specific IP address, please use the format x.x.x.x/32</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure JWAC update server:

```
DES-3528:5#config jwac other_server add ipaddress 10.90.90.109/24
Command: config jwac other_server add ipaddress 10.90.90.109/24
Warning: the real added update server is 10.90.90.0/24
Success.
DES-3528:5#
```

**NOTE:** If the update server is linked to the JWAC enabled port on the switch, it must be added to the static FDB correctly before it can work properly.
**Purpose**
Used to configure the TCP port which the JWAC Switch listens to.

**Syntax**
```
config jwac switch_http_port < tcp_port_number 1-65535> {[http | https]}
```

**Description**
This command allows you to configure the TCP port which the JWAC Switch listens to. This port number is used in the second stage of the authentication. PC user will connect the page on the switch to input the user name and password.

If not specified, the default port number is `80`.
If no protocol specified, the protocol is HTTP.

**Parameters**

- `< tcp_port_number 1-65535>` – A TCP port which the JWAC Switch listens to and uses to finish the authenticating process.
- `http` – To specify the JWAC runs HTTP protocol on this TCP port
- `https` – To specify the JWAC runs HTTPS protocol on this TCP port

**Restrictions**
The HTTP cannot run at TCP port 443, and the HTTPS cannot run at TCP port 80.
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure JWAC switch_http_port:

```
DES-3528:5#config jwac switch_http_port 8888 http
Command: config jwac switch_http_port 8888 http
Success.
DES-3528:5#
```
# config jwac ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure port state of JWAC.</th>
</tr>
</thead>
</table>
| Syntax  | `config jwac ports [portlist] | all] [state [enable | disable] | max_authenticating_host
| Description | This command allows you to configure port state of JWAC. |
|           | The default value of `max_authenticating_host` is 50. |
|           | The default value of `aging_time` is 1440 minutes. |
|           | The default value of `idle_time` is infinite. |
|           | The default value of `block_time` is 0 seconds. |
| Parameters | `<portlist>` – A port range to set the JWAC state. |
|           | all – All the Switch ports’ JWAC state is to be configured. |
|           | state - To specify the port state of JWAC. |
|           | `max_authenticating_host` – Max number of host process authentication on each port at the same time. |
|           | The max authenticating hosts depends on a specific project. |
|           | `aging_time` – A time period during which an authenticated host will keep an authenticated state. |
|           | “infinite” indicates never to age out the authenticated host on the port |
|           | `idle_time` – If there is no traffic during idle_time, the host will be moved back to unauthenticated state |
|           | “infinite” indicates never to check the idle state of the authenticated host on the port. |
|           | `block_time` – If a host fail to pass the authentication, it will be blocked for a period specified by block_time. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure JWAC ports:

```plaintext
DES-3528:5#config jwac port 1-9 state enable
Command: config jwac port 1-9 state enable
Success.
DES-3528:5#
```
### config jwac radius_protocol

**Purpose**
Used to configure radius protocol used by JWAC.

**Syntax**
```bash
config jwac radius_protocol [local | pap | chap | ms_chap | ms_chapv2 | eap_md5]
```

**Description**
This command allows you to specify the RADIUS protocol used by JWAC to complete RADIUS authentication.

**Parameters**
- `local` – JWAC Switch uses local user DB to complete the authentication.
- `pap` – JWAC Switch uses PAP to communicate with the RADIUS server.
- `chap` – JWAC Switch uses CHAP to communicate with the RADIUS server.
- `ms_chap` – JWAC Switch uses MS-CHAP to communicate with the RADIUS server.
- `ms_chapv2` – JWAC Switch uses MS-CHAPv2 to communicate with RADIUS server.
- `eap_md5` – JWAC Switch uses EAP MD5 to communicate with the RADIUS server.

**Restrictions**
JWAC share other RADIUS configuration with 802.1X, when using this command to set the RADIUS protocol, you must make sure the RADIUS server added by the `config radius` command supports the protocol.
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure JWAC radius_protocol:

```
DES-3528:5# config jwac radius_protocol ms_chapv2
Command: config jwac radius_protocol ms_chapv2
Success.
DES-3528:5#
```

### create jwac user

**Purpose**
Used to create JWAC user into local DB.

**Syntax**
```bash
create jwac user <username 15> {vlan <vlanid 1-4094>}
```

**Description**
This command creates JWAC users into the local DB. When “local” is chosen during configuring JWAC RADIUS protocol, the local DB will be used.

**Parameters**
- `<username 15>` – The user name to be created. The max length of the username is 15 characters.
- `<vlanid 1-4094>` – Target VLAN ID for authenticated host which uses this user account to pass authentication.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To create a JWAC user:

```
DES-3528:5# create jwac user twatanabe
Command: create jwac user twatanabe
Enter a case-sensitive new password:***
Enter the new password again for confirmation:***
Success.
DES-3528:5#
```
config jwac user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to update local user DB.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config jwac user &lt;username 15&gt; {vlan &lt;vlanid 1-4094&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command updates the local user DB. Only the created user can be configured.</td>
</tr>
</tbody>
</table>
| Parameters | `<username 15>` – The user name to be created. The max length of the username is 15 characters.  
`<vlanid 1-4094>` – Target VLAN ID for authenticated host which uses this user account to pass authentication. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure a JWAC user:

```
DES-3528:5#config jwac user twatanabe vlan 3
Command: config jwac user twatanabe vlan 3
Enter a old password:**
Enter a case-sensitive new password:***
Enter the new password again for confirmation:***
Success.
DES-3528:5#
```

delete jwac user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete JWAC user from the local DB.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`delete jwac [user &lt;username 15&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command deletes JWAC users from the local DB.</td>
</tr>
</tbody>
</table>
| Parameters | `user` – To specify the user name to be deleted  
`all_user` – All user accounts in local DB will be deleted. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To delete a JWAC user:

```
DES-3528:5#delete jwac user twatanabe
Command: delete jwac user twatanabe
Success.
DES-3528:5#
```
### show jwac user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show JWAC user in the local DB.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show jwac user</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays JWAC users in the local DB.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To show a JWAC user:

```
DES-3528:5# show jwac user
Command: show jwac user

<table>
<thead>
<tr>
<th>Username</th>
<th>Password</th>
<th>VID</th>
</tr>
</thead>
<tbody>
<tr>
<td>twatanabe</td>
<td>123</td>
<td>2</td>
</tr>
</tbody>
</table>

Total Entries: 1
```

### clear jwac auth_state

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete host on JWAC enabled ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>clear jwac auth_state [ports [all</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to delete JWAC host.</td>
</tr>
<tr>
<td>Parameters</td>
<td>ports – To specify the port range to delete host on them.</td>
</tr>
<tr>
<td></td>
<td>authenticated – To specify the state of host to delete.</td>
</tr>
<tr>
<td></td>
<td>authenticating – To specify the state of host to delete.</td>
</tr>
<tr>
<td></td>
<td>blocked – To specify the state of host to delete.</td>
</tr>
<tr>
<td></td>
<td>&lt;macaddr&gt; – To delete a specified host with this MAC.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To delete a JWAC host:

```
DES-3528:5# clear jwac auth_state ports all blocked
Command: clear jwac auth_state ports all blocked
Success.
```
## show jwac

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the configuration of JWAC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show jwac</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to show all the configuration of JWAC.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None</td>
</tr>
</tbody>
</table>

### Example usage:

To display JWAC configuration:

```
DES-3528:5#show jwac
Command: show jwac

State : Disabled
Enabled Ports :
Virtual IP : 0.0.0.0
Switch HTTP Port : 80 (HTTP)
UDP Filtering : Enabled
Forcible Logout : Enabled
Redirect State : Enabled
Redirect Delay Time : 1 Seconds
Redirect Destination : Quarantine Server
Quarantine Server :
Q-Server Monitor : Disabled
Q-Srv Error Timeout : 30 Seconds
RADIUS Auth-Protocol : PAP
Authentication Failover : Disabled
RADIUS Authorization : Enabled
Local Authorization : Enabled
                  172.18.202.0/24
                  10.1.1.0/24
```

DES-3528:5#
show jwac auth_state ports

**Purpose**
Used to display information of JWAC client host

**Syntax**
`show jwac auth_state ports {<portlist>}`

**Description**
This command allows you to show the information of JWAC client host.

If port 1 is in host-based mode:
1. mac 00-00-00-00-00-01 is authenticated without VLAN assigned (may be the specified target VLAN does not exist or the target VLAN has not been specified), the ID of RX VLAN will be displayed (RX VLAN ID is 4004 in this example).
2. mac 00-00-00-00-00-02 is authenticated with target VLAN assigned, the ID of target VLAN will be displayed (target VLAN ID is 1234 in this example)
3. mac 00-00-00-00-00-03 failed to pass authentication, the VID field will be shown as "-" indicating that packets with SA 00-00-00-00-00-03 will be dropped no matter which VLAN these packets are from.
4. mac 00-00-00-00-00-04 attempts to start authentication, the VID field will be shown as "-" until authentication completed.

If port 2 is in port-based mode:
1. mac 00-00-00-00-00-10 is the mac which made port 2 pass authentication, mac address with "(P)" in the end indicates that this authentication is from a port in port-based mode.

If port 3 is in port-based mode:
1. mac 00-00-00-00-00-20 attempts to start authentication, mac address with "(P)" in the end indicates the port-based mode authentication.
2. mac 00-00-00-00-00-21 failed to pass authentication, mac address with "(P)" in the end indicates the port-based mode authentication.

**NOTE:** In port-based mode, the VLAN ID field is displayed in the same way as host-based mode

**Parameters**
`port` – A port range to show the information of client host.

**Restrictions**
None.

**Example usage:**
To display a JWAC host.

```
DES-3528:5#show jwac auth_state ports 5
Command: show jwac auth_state ports 5

<table>
<thead>
<tr>
<th>Port</th>
<th>MAC Address</th>

<td>5</td>
<td>00-05-5D-10-5A-6F</td>
<td>Authenticating</td>
<td>-</td>
<td>-</td>
<td>4</td>
<td>-</td>
</tr>
</tbody>
</table>

Total Authenticating Hosts : 1
Total Authenticated Hosts   : 0
Total Blocked Hosts        : 0
```

DES-3528:5#
**show jwac ports**

**Purpose**
Used to display port configuration of JWAC.

**Syntax**
```
show jwac ports <portlist>
```

**Description**
The show jwac port command allows you to display port configuration of JWAC.

**Parameters**
- `<portlist>` – To specify a port range to show the configuration of JWAC.

**Restrictions**
None.

**Example usage:**
To display JWAC ports.

```
DES-3528:5#show jwac ports 1-3
Command: show jwac ports 1-3

<table>
<thead>
<tr>
<th>Port</th>
<th>State</th>
<th>Aging Time (Minutes)</th>
<th>Idle Time (Minutes)</th>
<th>Block Time (Seconds)</th>
<th>Auth Mode</th>
<th>Max Hosts</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Disabled</td>
<td>1440</td>

<td>Infinite</td>
<td>60</td>
<td>Host_based</td>
<td>50</td>
</tr>
</tbody>
</table>

DES-3528:5#
```

**config jwac authentication_page element**

**Purpose**
Used to customize the authentication page.

**Syntax**
```
config jwac authentication_page element [japanese | english] [default | page_title <desc 128> | login_window_title <desc 32> | user_name_title <desc 16> | password_title <desc 16> | logout_window_title <desc 32>]
```

**Description**
This command allows the administrator to customize the JWAC authentication page.

**Parameters**
- `japanese` – Specifies that the page will change to Japanese.
- `english` – Specifies that the page will change to English.
- `default` – Specifies to reset the page element back to default.
- `page_title` – Specifies the title of the authentication page.
- `login_window_title` – The login window title of the authentication page.
- `user_name_title` – Specifies the user name title of the authentication page.
- `password_title` – Specifies the password title of the authentication page.
- `logout_window_title` – The logout window title mapping of the authentication page.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure authentication page.

```
DES-3528:5#config jwac authentication_page element japanese default
Command: config jwac authentication_page element japanese default
Success.
DES-3528:5#
```
**config jwac auth_failover**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable jwac auth_failover</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config jwac auth_failover [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the administrator to enable or disable jwac auth_failover. When the authentication failover is disabled and Radius servers are unreachable, the authentication will fail. When the authentication failover is enabled and Radius servers authentication are unreachable, the local database will be used to do the authentication. By default, the state is disabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>enable – Enable jwac auth_failover. disable – Disable jwac auth_failover.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable jwac auth_failover

```plaintext
DES-3528:5#config jwac auth_failover enable
Command: config jwac auth_failover enable
Success.
DES-3528:5#
```

**config jwac authorization network**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable the accepting of authorized configuration.</th>
</tr>
</thead>
</table>
| Syntax           | config jwac authorization network {radius [enable | disable] | local[enable | disable]}
| Description      | This command allows the administrator to configure authorization network for JWAC. When the authorization is enabled for JWAC’s radius, the authorized data assigned by the RADUIS server will be accepted if the global authorization network is enabled. When the authorization is enabled for JWAC’s local, the authorized data assigned by the local database will be accepted. |
| Parameters       | radius – If specified to enable, the authorized data assigned by the RADUIS server will be accepted if the global authorization network is enabled. The default state is enabled. local – If specified to enable, the authorized data assigned by the local database will be accepted if the global authorization network is enabled. The default state is enabled. |
| Restrictions     | Only Administrator and Operator-level users can issue this command. |

Example usage:

To enable the accepting of authorized configuration:

```plaintext
DES-3528:5#config jwac authorization network radius enable
Command: config jwac authorization network radius enable
Success.
DES-3528:5#
```
### config jwac authenticate_page

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to choose authenticate page.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config jwac authenticate_page [ Japanese</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows administrator to decide which authenticate page to be used.</td>
</tr>
<tr>
<td>Parameters</td>
<td>japanese – Choose the Japanese page</td>
</tr>
<tr>
<td></td>
<td>english – Choose the english page, the default page is english.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To choose Japanese authenticate page.

```
DES-3528:5#config jwac authenticate_page japanese
Command:  config jwac authenticate_page japanese
Success.
DES-3528:5#
```

### show jwac authenticate _page element

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the element mapping of the customize authenticate page.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show jwac authenticate _page element</td>
</tr>
<tr>
<td>Description</td>
<td>This command can display the element of the customize authenticate page.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None</td>
</tr>
</tbody>
</table>

Example usage:

To display element of authenticate page.

```
DES-3528:5#show jwac authenticate _page element
```
DES-3528:5# show jwac authenticate_page element
Command: show jwac authenticate_page element

The LLDP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable lldp</td>
<td></td>
</tr>
<tr>
<td>disable lldp</td>
<td></td>
</tr>
<tr>
<td>config lldp</td>
<td>message_tx_interval &lt;sec 5 - 32768&gt;</td>
</tr>
<tr>
<td>config lldp</td>
<td>message_tx_hold_multiplier &lt;2 – 10&gt;</td>
</tr>
<tr>
<td>config lldp</td>
<td>tx_delay &lt;sec 1 - 8192&gt;</td>
</tr>
<tr>
<td>config lldp</td>
<td>reinit_delay &lt;sec 1 - 10&gt;</td>
</tr>
<tr>
<td>config lldp</td>
<td>notification_interval &lt;sec 5 - 3600&gt;</td>
</tr>
<tr>
<td>config lldp ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config lldp ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config lldp ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config lldp ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config lldp ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config lldp ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config lldp ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config lldp</td>
<td>forward_message [enable</td>
</tr>
<tr>
<td>show lldp</td>
<td></td>
</tr>
<tr>
<td>show lldp mgt_addr</td>
<td>{ipv4 &lt;ipaddr&gt;}</td>
</tr>
<tr>
<td>show lldp ports</td>
<td>{&lt;portlist&gt;}</td>
</tr>
<tr>
<td>show lldp local_ports</td>
<td>{&lt;portlist&gt;} {mode [brief</td>
</tr>
<tr>
<td>show lldp remote_ports</td>
<td>{&lt;portlist&gt;} {mode [brief</td>
</tr>
<tr>
<td>show lldp statistics</td>
<td></td>
</tr>
<tr>
<td>show lldp statistics ports</td>
<td>{&lt;portlist&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
enable lldp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable LLDP operation on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable lldp</td>
</tr>
<tr>
<td>Description</td>
<td>This is a global control for the LLDP function. When this function is enabled, the switch can start to transmit LLDP packets and receive and process the LLDP packets. The specific function of each port will depend on the per port LLDP setting. For the advertisement of LLDP packets, the switch announces the information to its neighbor through ports. For the receiving of LLDP packets, the switch will learn the information from the LLDP packets advertised from the neighbor in the neighbor table. The default state for LLDP is disabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable LLDP:

```
DES-3528:5#enable enable lldp
Command: enable lldp
Success.
DES-3528:5#
```

disable lldp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable LLDP operation on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable lldp</td>
</tr>
<tr>
<td>Description</td>
<td>This command will stop the sending and receiving of LLDP advertisement packets on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable LLDP:

```
DES-3528:5#disable lldp
Command: disable lldp
Success.
DES-3528:5#
```

config lldp message_tx_interval

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to change the packet transmission interval.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config lldp messageTx_interval &lt;sec 5 – 32768&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This interval controls how often active ports retransmit advertisements to their neighbors.</td>
</tr>
<tr>
<td>Parameters</td>
<td>messageTxInterval – Changes the interval between consecutive transmissions of LLDP advertisements on any given port. The range is from 5 seconds to 32768 seconds. The default setting is 30 seconds.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Usage Example:

To show the packet transmission interval:
config lldp message_tx_hold_multiplier

Purpose: Used to configure the message hold multiplier.
Syntax: config lldp message_tx_hold_multiplier < 2 - 10 >
Description: This command is a multiplier on the msgTxInterval that is used to compute the TTL value of txTTL in an LLDPDU. The TTL will be carried in the LLDPDU packet. The lifetime will be the minimum of 65535 and (message_tx_interval * message_tx_hold_multiplier). At the partner switch, when the time-to-Live for a given advertisement expires, the advertised data is deleted from the neighbor switch’s MIB.
Parameters: Message_tx_hold_multiplier – The range is from 2 to 10. The default setting is 4.
Restrictions: Only Administrator and Operator-level users can issue this command.

Usage Example:
To change the multiplier value:

DES-3528:5#config lldp message_tx_hold_multiplier 3
Command: config lldp message_tx_hold_multiplier 3
Success.

DES-3528:5#

config lldp tx_delay

Purpose: Used to change the minimum time (delay-interval) any LLDP port will delay advertising successive LLDP advertisements due to a change in LLDP MIB content. The tx_delay defines the minimum interval between sending of LLDP messages due to constantly change of MIB content.
Syntax: config lldp tx_delay < sec 1–8192 >
Description: The LLDP message_tx_interval (transmit interval) must be greater than or equal to (4 x tx_delay interval).
Parameters: tx_delay – The range is from 1 second to 8192 seconds. The default setting is 2 seconds.
NOTE: txDelay should be less than or equal to 0.25 * msgTxInterval.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the delay interval:

DES-3528:5#config lldp tx_delay 8
Command: config lldp tx_delay 8
Success.

DES-3528:5#
### config lldp reinit_delay

**Purpose**  
Change the minimum time of the reinitialization delay interval.

**Syntax**  
config lldp reinit_delay <sec 1 - 10>

**Description**  
An re-enabled LLDP port will wait for reinit_delay after last disable command before reinitializing.

**Parameters**  
- **reinit_delay** – The range is from 1 second to 10 seconds. The default setting is 2 seconds.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To change the re-initialization delay interval to five seconds:

```
DES-3528:5# config lldp reinit_delay 5
Command: config lldp reinit_delay 5
Success.
DES-3528:5#
```

### config lldp notification _interval

**Purpose**  
Used to configure the timer of the notification interval for sending notification to configured SNMP trap receiver(s).

**Syntax**  
config lldp notification_interval <sec 5 – 3600>

**Description**  
This command is used to globally change the interval between successive LLDP change notifications generated by the switch.

**Parameters**  
- **notification_interval** – The range is from 5 seconds to 3600 seconds. The default setting is 5 seconds.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Usage Example:**

To change the notification interval to 10 seconds:

```
DES-3528:5# config lldp notification_interval 10
Command: config lldp notification_interval 10
Success.
DES-3528:5#
```

### config lldp ports notification

**Purpose**  
Used to configure each port for sending notification to configured SNMP trap receiver(s).

**Syntax**  
config lldp ports [<portlist> | all] notification [enable | disable]

**Description**  
This command is used to enable or disable each port for sending changes notification to configured SNMP trap receiver(s) if an LLDP data change is detected in an advertisement received on the port from an LLDP neighbor. The definition of change includes new available information, information timeout, information update. And the changed type includes any data update /insert/remove.

**Parameters**  
- **<portlist>** – Use this parameter to define ports to be configured.
- **all** – Use this parameter to set all ports in the system.
- **notification** – Enables or disables the SNMP trap notification of LLDP data changes detected on advertisements received from neighbor devices. The default notification state is disabled.
### config lldp ports notification

**Restrictions** Only Administrator and Operator-level users can issue this command.

Example usage:

To change the SNMP notification state of ports 1 to 5 to enable:

```
DES-3528:5# config lldp ports 1-5 notification enable
Command: config lldp ports 1-5 notification enable
Success.
```

### config lldp ports admin_status

**Purpose** Used to configure per-port transmit and receive modes.

**Syntax** config lldp ports [<portlist> | all] admin_status [tx_only | rx_only | tx_and_rx | disable]

**Description** This command is used to control which ports participate in LLDP traffic and whether the participating ports allow LLDP traffic in only one direction or in both directions.

**Parameters**

- `<portlist>` – Use this parameter to define ports to be configured.
- `all` – Use this parameter to set all ports in the system.
- `admin_status` – `tx_only`: Configure the specified port(s) to transmit LLDP packets, but block inbound LLDP packets from neighbor devices; `rx_only`: Configure the specified port(s) to receive LLDP packets from neighbors, but block outbound packets to neighbors; `tx_and_rx`: Configure the specified port(s) to both transmit and receive LLDP packets; `disable`: Disable LLDP packet transmit and receive on the specified port(s). The default per port state is `tx_and_rx`.

**Restrictions** Only Administrator and Operator-level users can issue this command.

Example usage:

To configure ports 1 to 5 to transmit and receive:

```
DES-3528:5# config lldp ports 1-5 admin_status rx_and_tx
Command: config lldp ports 1-5 admin_status rx_and_tx
Success.
```

### config lldp ports mgt_addr

**Purpose** Used to enable or disable port(s) specified for advertising indicated management address instance.

**Syntax** config lldp ports [<portlist> | all] mgt_addr [ipv4 <ipaddr> | [enable | disable]

**Description** This command specifies whether the system’s IP address needs to be advertised from the specified port. For layer 3 devices, each managed address can be individually specified. The management addresses that are added in the list will be advertised in the LLDP from the specified interface associated with each management address. The interface for that management address will be also advertised in the if-index Form

**Parameters**

- `<portlist>` – Use this parameter to define ports to be configured.
- `all` – Use this parameter to set all ports in the system.
- `ipv4` – The IP address of IPv4.

**Restrictions** Only Administrator and Operator-level users can issue this command.
To enable ports 1 to 2 to manage address entry:

```
DES-3528:5# config lldp ports 1-2 mgt_addr ipv4 192.168.254.10 enable
Command: config config lldp ports 1-2 mgt_addr ipv4 192.168.254.10 enable
Success.
DES-3528:5#
```

### config lldp ports basic_tlvs

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure an individual port or group of ports to exclude one or more optional TLV data types from outbound LLDP advertisements.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config lldp ports [-&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>An active LLDP port on the switch always includes the mandatory data in its outbound advertisements. And there are four optional data that can be configured for an individual port or group of ports to exclude one or more of these data types from outbound LLDP advertisements. The mandatory data type include four basic types of information (end of LLDPDU TLV, chassis ID TLV, port ID TLV, and Time to Live TLV). The mandatory type cannot be disabled. There are also four data types which can be optionally selected. They are <code>port_description</code>, <code>system_name</code>, <code>system_description</code>, and <code>system_capabilities</code>.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Use this parameter to define ports to be configured. &lt;br&gt; <code>all</code> – Use this parameter to set all ports in the system. &lt;br&gt; <code>port_description</code> – This TLV optional data type indicates that LLDP agent should transmit 'Port Description TLV' on the port. The default state is disabled. &lt;br&gt; <code>system_name</code> – This TLV optional data type indicates that LLDP agent should transmit 'System Name TLV'. The default state is disabled. &lt;br&gt; <code>system_description</code> – This TLV optional data type indicates that LLDP agent should transmit 'System Description TLV'. The default state is disabled. &lt;br&gt; <code>system_capabilities</code> – This TLV optional data type indicates that LLDP agent should transmit 'System Capabilities TLV'. The system capability will indicate whether the device provides repeater, bridge, or router function, and whether the provided functions are currently enabled. The default state is disabled.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Usage Example:

To configure exclude the system name TLV from the outbound LLDP advertisements for all ports:

```
DES-3528:5# config lldp ports all basic_tlvs system_name enable
Command: config lldp ports all basic_tlvs system_name enable
Success.
DES-3528:5#
```
config lldp dot1_tlv_pvid

Purpose:
Used to configure an individual port or group of ports to exclude one or more of IEEE 802.1
organizationally defined port VLAN ID TLV data types from outbound LLDP advertisements.

Syntax:
config lldp ports [<portlist> | all] dot1_tlv_pvid [enable | disable]

Description:
This TLV optional data type determines whether the IEEE 802.1 organizationally defined port
VLAN TLV transmission is allowed on a given LLDP transmission capable port.

Parameters:
- `<portlist>` – Use this parameter to define ports to be configured.
- `all` – Use this parameter to set all ports in the system.
- `dot1_tlv_pvid` – This TLV optional data type determines whether the IEEE 802.1
organizationally defined port VLAN ID TLV transmission is allowed on a given LLDP
transmission capable port. The default state is disabled.

Restrictions:
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure exclude the VLAN name TLV from the outbound LLDP advertisements for all ports:

DES-3528:5#config lldp ports all dot1_tlv_pvid enable
Command: config lldp ports all dot1_tlv_pvid enable
Success.
DES-3528:5#

config lldp dot1_tlv_protocol_vid

Purpose:
Used to configure an individual port or group of ports to exclude one or more of IEEE 802.1
organizationally port and protocol VLAN ID TLV data types from outbound LLDP advertisements.

Syntax:
config lldp ports [<portlist> | all] dot1_tlv_protocol_vid [vlan [all | <vlan_name 32>] | vlanid <vlanid_list>] [enable | disable]

Description:
This TLV optional data type indicates whether the corresponding Local System's port and
protocol VLAN ID instance will be transmitted on the port. If a port is associated with multiple
protocol VLANs, those enabled port and protocol VLAN IDs will be advertised.

Parameters:
- `<portlist>` – Use this parameter to define ports to be configured.
- `all` – Use this parameter to set all ports in the system.
- `dot1_tlv_protocol_vid` – This TLV optional data type determines whether the IEEE 802.1
organizationally defined port and protocol VLAN ID TLV transmission is allowed on a given
LLDP transmission capable port. The default state is disabled.

Restrictions:
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure exclude the port and protocol VLAN ID TLV from the outbound LLDP advertisements for all ports:

DES-3528:5#config lldp ports all dot1_tlv_protocol_vid vlanid 1-3 enable
Command: config lldp ports all dot1_tlv_protocol_vid vlanid 1-3 enable
Success.
DES-3528:5#
### config lldp dot1_tlv_vlan_name

**Purpose**  
Used to configure an individual port or group of ports to exclude one or more of IEEE 802.1 Organizationally VLAN name TLV data types from outbound LLDP advertisements.

**Syntax**  
```
config lldp ports [<portlist> | all] dot1_tlv_vlan_name [vlan [all | <vlan_name 32>] | vlanid <vlanid_list>] [enable | disable]
```

**Description**  
This TLV optional data type indicates whether the corresponding Local System’s VLAN name instance will be transmitted on the port. If a port is associated with multiple VLANs, those enabled VLAN IDs will be advertised.

**Parameters**
- `<portlist>` – Use this parameter to define ports to be configured.
- `all` – Use this parameter to set all ports in the system.
- `dot1_tlv_vlan_name` – This TLV optional data type indicates whether the corresponding Local System’s VLAN name instance will be transmitted on the port. If a port is associated with multiple VLANs, those enabled VLAN IDs will be advertised. The default state is disabled.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Usage Example:**

To configure exclude the VLAN name TLV from the outbound LLDP advertisements for all ports:

```
DES-3528:5# config lldp ports all dot1_tlv_vlan_name vlanid 1-3 enable
Success.
```

### config lldp dot1_tlv_protocol_identity

**Purpose**  
Used to configure an individual port or group of ports to exclude one or more of IEEE 802.1 Organizationally protocol identity TLV data types from outbound LLDP advertisements.

**Syntax**  
```
config lldp ports [<portlist> | all] dot1_tlv_protocol_identity [all | {eapol | lacp | gvrp | stp }]([1]) [enable | disable]
```

**Description**  
This TLV optional data type indicates whether the corresponding Local System’s Protocol Identity instance will be transmitted on the port. The Protocol Identity TLV provides a way for stations to advertise protocols that are important to the operation of the network. Such as Spanning Tree Protocol, the Link Aggregation Control Protocol, and numerous vendor proprietary variations are responsible for maintaining the topology and connectivity of the network. If EAPOL, GVRP, STP (including MSTP), and LACP protocol identity is enabled on this port and it is enabled to be advertised, then this protocol identity will be advertised.

**Parameters**
- `<portlist>` – Use this parameter to define ports to be configured.
- `all` – Use this parameter to set all ports in the system.
- `dot1_tlv_protocol_identity` – This TLV optional data type indicates whether the corresponding Local System’s Protocol Identity instance will be transmitted on the port. The Protocol Identity TLV provides a way for stations to advertise protocols that are important to the operation of the network. Such as Spanning Tree Protocol, the Link Aggregation Control Protocol, and numerous vendor proprietary variations are responsible for maintaining the topology and connectivity of the network. If EAPOL, GVRP, STP (including MSTP), and LACP protocol identity is enabled on this port and it is enabled to be advertised, then this protocol identity will be advertised. The default state is disabled.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.
Example usage:

To configure exclude the protocol identity TLV from the outbound LLDP advertisements for all ports:

```
DES-3528:5#config lldp ports all dot1_tlv_protocol_identity all enable
Command: config lldp ports all dot1_tlv_protocol_identity all enable
Success.
DES-3528:5#
```

```
config lldp dot3_tlvs

Purpose
Used to configure an individual port or group of ports to exclude one or more of IEEE 802.3 Organizationally Specific TLV data types from outbound LLDP advertisements.

Syntax
config lldp ports [<portlist> | all] dot3_tlvs [{all} | {mac_phy_configuration_status | link_aggregation | power_via_mdi | maximum_frame_size}] [enable | disable]

Description
Each Specific TLV in this extension can be enabled individually.

Parameters

<portlist> – Use this parameter to define ports to be configured.

all – Use this parameter to set all ports in the system.

mac_phy_configuration_status – This TLV optional data type indicates that LLDP agent should transmit 'MAC/PHY configuration/status TLV'. This type indicates it is possible for two ends of an IEEE 802.3 link to be configured with different and/or speed settings and still establish some limited network connectivity. More precisely, the information includes whether the port support the auto-negotiation function, whether the function is enabled, the auto-negotiated advertised capability, and the operational MAU type. The default state is disabled.

link_aggregation – This TLV optional data type indicates that LLDP agent should transmit 'Link Aggregation TLV'. This type indicates the current link aggregation status of IEEE 802.3 MACs. More precisely, the information should include whether the port is capable of doing link aggregation, whether the port is aggregated in a aggregated link, and the aggregated port ID. The default state is disabled.

power_via_mdi – This TLV optional data type indicates that the LLDP agent should transmit 'Power via MDI TLV'. Three IEEE 802.3 PMD implementations (10BASE-T, 100BASE-TX, and 1000BASE-T) allow power to be supplied over the link for connected non-powered systems. The Power Via MDI TLV allows network management to advertise and discover the MDI power support capabilities of the sending IEEE 802.3 LAN station. The default state is disabled. Note: Not supported in the current release.

maximum_frame_size – This TLV optional data type indicates that LLDP agent should transmit 'Maximum-frame-size TLV. The default state is disabled.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure exclude the MAC/PHY configuration/status TLV from the outbound LLDP advertisements for all ports:

```
DES-3528:5#config lldp ports all dot3_tlvs mac_phy_configuration_status enable
Command: config lldp ports all dot3_tlvs mac_phy_configuration_status enable
Success.
DES-3528:5#
```
**config lldp forward_message**

**Purpose**: Used to configure the forwarding of LLDPDU packets when LLDP is disabled.

**Syntax**: `config lldp forward_message [enable | disable]`

**Description**: When LLDP is disabled and LLDP forward_message is enabled, the received LLDPDU packets will be forwarded. The default state is disabled.

**Parameters**: None.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

*Usage Example:*

To configure LLDP forward_message:

```
DES-3528:5#config lldp forward_message enable
Command: config lldp forward_message enable
Success.
DES-3528:5#
```

**show lldp**

**Purpose**: Used to display the Switch’s general LLDP configuration status.

**Syntax**: `show lldp`

**Description**: This command displays the switch’s general LLDP configuration status.

**Parameters**: None.

**Restrictions**: None.

*Usage Example:*

To display the LLDP system level configuration status:

```
DES-3552:5#show lldp
Command: show lldp

LLDP System Information
Chassis ID Subtype: MAC Address
Chassis ID: 00-80-C2-11-22-00
System Name: 
System Description: Fast Ethernet Switch
System Capabilities: Repeater, Bridge

LLDP Configurations
LLDP Status: Disabled
LLDP Forward Status: Disabled
Message Tx Interval: 30
Message Tx Hold Multiplier: 4
ReInit Delay: 2
Tx Delay: 2
Notification Interval: 5
```

DES-3552:5#
### show lldp mgt_addr

**Purpose**
Used to display the LLDP management address information.

**Syntax**
`show lldp mgt_addr {ipv4 <ipaddr>}`

**Description**
This command displays the LLDP management address information.

**Parameters**
- `ipv4` – The IP address of IPv4.

**Restrictions**
None.

#### Example usage:
To display management address information 1:

```
DES-3528:5#show lldp mgt_addr ipv4 10.24.73.21
Command: show lldp mgt_addr ipv4 10.24.73.21

Address 1
---------------------------------
Subtype                              : IPv4
Address                              : 10.24.73.21
IF type                              : Unknown
OID                                  : 1.3.6.1.4.1.171.10.105.1
Advertising Ports                    :

DES-3528:5#
```

### show lldp ports

**Purpose**
Used to display the LLDP per port configuration for advertisement options.

**Syntax**
`show lldp ports {<portlist>}`

**Description**
This command displays the LLDP per port configuration for advertisement options.

**Parameters**
- `<portlist>` – Use this parameter to define ports to be configured.

**Restrictions**
None.

#### Example usage:
To display the LLDP per port TLV option configuration:

```
DES-3528:5#
```
show lldp local_ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the per-port information currently available for populating outbound LLDP advertisements.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show lldp local_ports {&lt;portlist&gt;} {mode [brief</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the per-port information currently available for populating outbound LLDP advertisements.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;portlist&gt; – Use this parameter to define ports to be configured.</td>
</tr>
<tr>
<td></td>
<td>brief – Display the information in brief mode.</td>
</tr>
<tr>
<td></td>
<td>normal – Display the information in normal mode. This is the default display mode.</td>
</tr>
<tr>
<td></td>
<td>detailed – Display the information in detailed mode.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Usage Example:

To display outbound LLDP advertisements for port 1-2:
DES-3528:5#show lldp local_ports 1-2

Command: show lldp local_ports 1-2

Port ID : 1
-----------------------------------------------------------
Port ID Subtype : Local
Port ID : 1/1
Port Description : RMON Port 1 on Unit 1
Port PVID : 1
Management Address Count : 1
PPVID Entries Count : 0
VLAN Name Entries Count : 1
Protocol Identity Entries Count : 0
MAC/PHY Configuration/Status : (See Detail)
Link Aggregation : (See Detail)
Maximum Frame Size : 1536

Port ID : 2
-----------------------------------------------------------
Port ID Subtype : Local
Port ID : 1/1
Port Description : RMON Port 1 on Unit 1
Port PVID : 1
Management Address Count : 1

show lldp remote_ports

Purpose
Used to display the information learned from the neighbor.

Syntax
show lldp remote_ports {<portlist>} {mode [brief | normal | detailed]}

Description
This command displays the information learned from the neighbor parameters. Due to a memory limitation, only 32 VLAN Name entries and 10 Management Address entries can be received.

Parameters

<portlist> – Use this parameter to define ports to be configured.
mode – Choose from three options:
brief – Display the information in brief mode.
normal – Display the information in normal mode. This is the default display mode.
detailed – Display the information in detailed mode.

Restrictions
None.

Example usage:
To display remote table in brief mode:

DES-3528:5#show lldp remote_ports 1-2 mode brief

Command: show lldp remote_ports 1-2 mode brief

Port ID: 1
-----------------------------------------------------------
Remote Entities Count : 1
Entity 1
  Chassis ID Subtype : MAC Address
  Chassis ID : 00-01-0-2-03-04-01
  Port ID Subtype : Local
  Port ID : 1/3
  Port Description : RMON Port 1 on Unit 3

CTRL+C ESC < Quit SPACE > Next Page ENTER Next Entry a All
show lldp statistics

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the system LLDP statistics information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show lldp statistics</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays an overview of neighbor detection activity on the switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display global statistics information:

```
DES-3528:5#show lldp statistics
Command: show lldp statistics
Last Change Time : 1705
Number of Table Insert : 0
Number of Table Delete : 0
Number of Table Drop : 0
Number of Table Ageout : 0
DES-3528:5#
```

show lldp statistics ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the ports LLDP statistics information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show lldp statistics ports{&lt;portlist&gt;}</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays per-port LLDP statistics.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;portlist&gt; – Use this parameter to define ports to be configured. When portlist is not specified, information for all ports will be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Usage Example:

To display statistics information of port 1:

```
DES-3528:5#show lldp statistics ports 1
Command: show lldp statistics ports 1
Port ID : 1
------------------------------------------------------
   LLDPStatsTxPortFramesTotal : 0
   LLDPStatsRxPortFramesDiscardedTotal : 0
   LLDPStatsRxPortFramesErrors : 0
   LLDPStatsRxPortFramesTotal : 0
   LLDPStatsRxPortTLVsDiscardedTotal : 0
   LLDPStatsRxPortTLVsUnrecognizedTotal : 0
   LLDPStatsRxPortAgeoutsTotal : 0
DES-3528:5#
```
Q-IN-Q COMMANDS

The Q-in-Q commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable qinq</td>
<td></td>
</tr>
<tr>
<td>disable qinq</td>
<td></td>
</tr>
<tr>
<td>show qinq</td>
<td></td>
</tr>
<tr>
<td>show qinq inner_tpid</td>
<td></td>
</tr>
<tr>
<td>config qinq ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show qinq ports</td>
<td>{&lt;portlist&gt;}</td>
</tr>
<tr>
<td>config qinq inner_tpid</td>
<td>&lt;hex 0x1 - 0xffff&gt;</td>
</tr>
<tr>
<td>create vlan_translation</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>delete vlan_translation</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show vlan_translation</td>
<td>{ports &lt;portlist&gt; }</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable qinq**

**Purpose**
Used to enable Q-in-Q mode.

**Syntax**
enable qinq

**Description**
This command enables Q-in-Q mode. When enable Q-in-Q, all network port roles will be NNI port and their outer TPID will be set to 88a8. All existed static VLAN will run as SP-VLAN. All dynamically learned L2 address will be cleared. All dynamically registered VLAN entries will be cleared, GVRP will be disabled. If you need to run GVRP on the Switch, you shall enable GVRP manually. In Q-in-Q mode, SP-VLAN GVRP Address (01-80-C2-00-00-0D) will be used by GVRP protocol. The default setting of Q-in-Q is disabled

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage**

To enable Q-in-Q:

DES-3528:5#enable qinq
Command: enable qinq
Success.

DES-3528:5#
**disable qinq**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the Q-in-Q mode.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable qinq</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command disables the Q-in-Q mode. All dynamically learned L2 address will be cleared. All dynamically registered VLAN entries will be cleared. GVRP will disable. If you need to run GVRP on the switch, you shall enable GVRP manually. All existed SP-VLAN will run as static 1Q VLAN</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage

To disable Q-in-Q:

```
DES-3528:5#disable qinq
Command: disable qinq
Success.
DES-3528:5#
```

**show qinq**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show global Q-in-Q.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show qinq</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to show the global Q-in-Q status</td>
</tr>
<tr>
<td>Parameters</td>
<td>None</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage

To show global Q-in-Q status:

```
DES-3528:5#show qinq
Commands: show qinq

QinQ Status: Enabled

DES-3528:5#
```
### configure qinq ports

**Purpose**
Used to configure Q-in-Q port.

**Syntax**
```
configure qinq ports [portlist] | all] [role [uni | nni] | missdrop [enable | disable] | outer_tpid <hex 0x1 - 0xffff> | use_inner_priority [enable | disable] | vlan_preservation [enable | disable] | add_inner_tag [hex 0x1 - 0xffff] | disable]](1)
```

**Description**
This command is used to configure the Q-in-Q VLAN mode for ports, include:
- Port role in double tag VLAN mode, enable/disable SP-VLAN assignment miss drop, port outer TPID, use inner priority, and enable/disable add inner tag.
- If missdrop is enabled, the packet that does not match any assignment rule in the Q-in-Q profile will be dropped. If disabled, then the packet will be assigned to the PVID of the received port.
- This setting will not be effective when Q-in-Q mode is disabled.

**Parameters**
- **portlist** – A range of ports to configure.
- **role** – Port role in Q-in-Q mode, it can be either UNI port or NNI port.
  - UNI – User-to-Network Interface specifies that communication between the specified user and a specified network will occur.
  - NNI – Network-to-Network Interface specifies that communication between two specified networks will occur.
- **missdrop** – enable/disable C-VLAN based SP-VLAN assignment miss drop.
- **outer_tpid** – Allows the interoperation with devices on a public network by specifying ports.
- **use_inner_priority** – Specifies whether to use the priority in the C-VLAN tag as the priority in the SP-VLAN tag.
- **vlan_preservation** – Specifies to enable or disable VLAN preservation.
- **add_inner_tag** - Specifies whether to add inner tag for ingress untagged packets. If set, the inner tag will be added for the ingress untagged packets and thus the packets egress to the NNI port will be double tagged. If disable, only s-tag will be added for ingress untagged packets.

**Restrictions**
- Only Administrator and Operator-level users can issue this command. You must be in the Q-in-Q mode.

**Example usage**
To config port list 1-4 as NNI port, set outer TPID to 0x88a8:

```
DES-3528:5#configure qinq ports 1-4 role nni outer_tpid 0x88a8
Command: configure qinq ports 1-4 role nni outer_tpid 0x88a8
Success.
```

### show qinq ports

**Purpose**
Used to show global Q-in-Q and port's Q-in-Q mode status.

**Syntax**
```
show qinq ports <portlist>
```

**Description**
This command is used to show the Q-in-Q configuration for a port, include:
- Port role in Q-in-Q mode, enable/disable to drop the SP-VLAN assignment miss packet, port outer TPID, use inner priority, and enable/disable add inner tag.

**Parameters**
- **portlist** – Specifies a range of ports to be displayed.
  - If no parameter specified, system will display all ports information.

**Restrictions**
None.
Example usage

To show double tagging mode for ports 1-4 of unit 1:

```
DES-3528:5# show qinq ports 1:1-1:4
Command: show qinq ports 1:1-1:4

+-----+------+-+--------+----------------+-----------+---+
<table>
<thead>
<tr>
<th>Port</th>
<th>Role</th>
<th>Missdrop</th>
<th>Outer TPID</th>
<th>Use Inner Priority</th>
<th>Add Inner Tag</th>
<th>Prev</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>
```

```
DES-3528:5#
```

### `config qinq inner_tpid`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the system’s inner TPID.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config qinq inner_tpid &lt;hex 0x1 - 0xffff&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>The command is used to configure the inner TPID of the system. The inner TPID is used to decide whether the ingress packet is c-tagged. Inner tag TPID is per system configurable. This command is for projects that support per system TPID configuration. For projects that support per port TPID configuration, the <code>config qinq ports inner_tpid</code> command should be supported.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage

To configure the inner TPID in the system to 0x9100:

```
DES-3528:5# config inner_TPID 0x9100
Success.
```

```
DES-3528:5#
```
create vlan_translation ports

Purpose
Used to create VLAN translation rule.

Syntax
```text
create vlan_translation ports [<portlist> | all] cvid <vidlist> [add | replace] svid <vlanid 1-4094> {priority <value 0-7>}
```

Description
This command can be used to add translation relationship between C-VLAN and SP-VLAN.
On ingress at UNI port, the C-VLAN tagged packets will be translated to SP-VLAN tagged packets by adding or replacing according the configured rule. On egress at this port, the SP-VLAN tag will be recovered to C-VLAN tag or be stripped.
The priority will be the priority in the SP-VLAN tag if the use_inner_priority flag is disabled for the receipt port.
This configuration is only effective for an UNI port.
This setting will not be effective when Q-in-Q mode is disabled.
Note that if the action of the rule replaces C-VLAN tag, the relationship between C-VALN and S-VLAN on the port shall be one-to-one mapping. Multiple C-VLAN map to one S-VLAN on a port is not supported, users shall take care of this while configuring the rules.

Parameters
- **portlist** – A range of ports under Q-in-Q rules which assign the SP-VLAN tag based on the C-VLAN tag for received C-VLAN tagged packets on these ports.
- **cvid** – C-VLAN ID to match.
- **add** – The action indicates to add a tag for the assigned SP-VLAN before the C-VLAN tag.
- **replace** – The action indicates to replace the C-VLAN tag with the SP VLAN
- **svid** – SP-VLAN ID.
- **priority** – The priority of the s-tag.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage
To create vlan translation rule which assign to add SP-VALN 100 to C-VLAN 1-10 on ports 1-4 and the priority is 4:

```
DES-3528:5# create vlan_translation ports 1-4 cvid 10 add svid 100 priority 4
Command: create vlan_translation ports 1-4 cvid 10 add svid 100 priority 4
Success.
DES-3528:5#
```

delete vlan_translation ports

Purpose
Used to delete pre-created VLAN translation rules.

Syntax
```text
delete vlan_translation ports [<portlist> | all] {cvid <vidlist>}
```

Description
The command is used to delete pre-created VLAN translation rules.

Parameters
- **ports** – A range of ports which the rule will be deleted.
- **cvid** – Specify C-VLAN range which the rules will be deleted. If no specify the parameter, all rules on the specified ports will be deleted.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage
To delete vlan translation rule on ports 1-4:

```text
DES-3528:5# delete vlan_translation ports 1-4
Command: delete vlan_translation ports 1-4
Success.
DES-3528:5#
```
DES-3528:5#delete vlan_translation ports 1-4
Command: delete vlan_translation ports 1-4
Success.
DES-3528:5#

### show vlan_translation

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show pre-created C-VLAN based SP-VLAN assignment rules.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show vlan_translation {ports &lt;portlist&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>The command is used to show pre-created C-VLAN based SP-VLAN assignment rules.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>ports</code> – A range of ports which the rules will be displayed. If no parameters specified, all rules will be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage**

To show vlan_translation rules in the system:

DES-3528:5#show vlan_translation

Commands: `show vlan_translation`

<table>

RSPAN COMMANDS

The Remote Switched Port Analyzer (RSPAN) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable rspan</td>
<td></td>
</tr>
<tr>
<td>disable rspan</td>
<td></td>
</tr>
<tr>
<td>create rspan vlan</td>
<td>[vlan_name &lt;vlan_name&gt;</td>
</tr>
<tr>
<td>delete rspan vlan</td>
<td>[vlan_name &lt;vlan_name&gt;</td>
</tr>
<tr>
<td>config rspan vlan</td>
<td>[vlan_name &lt;vlan_name&gt;</td>
</tr>
<tr>
<td>show rspan</td>
<td>{{vlan_name &lt;vlan_name&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable rspan**

**Purpose**

Used to enable RSPAN.

**Syntax**

enable rspan

**Description**

This command controls the RSPAN function. The purpose of RSPAN function is to mirror the packets to the remote switch. The packet travels from the switch where the monitored packet is received, through an intermediate switch, then to the switch where the sniffer is attached. The first switch is also named the source switch. To make the RSPAN work, for the source switch, the RSPAN VLAN source setting must be configured. For the intermediate and the last switch, the RSPAN VLAN redirect setting must be configured.

**NOTE:** RSPAN VLAN mirroring only works when RSPAN is enabled, an RSPAN VLAN has been configured with source ports, and mirror is enabled. RSPAN redirect function will work when RSPAN is enabled and at least one RSPAN VLAN has been configured with redirect ports.

**Parameters**

None.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To enable RSPAN:

```
DES-3528:5#enable rspan
Command: enable rspan
Success.
DES-3528:5#
```
<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
<th>Syntax</th>
<th>Parameters</th>

</tr>
<tr>
<td></td>
<td>Parameters</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Restrictions</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example usage:
To create a RSPAN VLAN:
```
DES-3528:5#create rspan vlan vlan_name v3
Command: create rspan vlan vlan_name v3
Success.
DES-3528:5#
```

<table>
<thead>
<tr>
<th>Command</th>
<th>Purpose</th>
<th>Syntax</th>
<th>Parameters</th>
<th>Restrictions</th>
</tr>
</thead>
<tbody>
<tr>
<td>delete rspan vlan</td>
<td>Used to delete a RSPAN VLAN.</td>
<td>`delete rspan vlan [vlan_name &lt;vlan_name&gt;</td>
<td>vlan_id &lt;value 1-4094&gt;]`</td>
<td><code>vlan_name</code> – Delete RSPAN VLAN by VLAN name.</td>
</tr>
<tr>
<td></td>
<td>This command is used to delete RSPAN VLANs.</td>
<td></td>
<td><code>vlan_id</code> – Delete RSPAN VLAN by VLAN ID.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Parameters</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Restrictions</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example usage:
To delete a RSPAN VLAN:
```
```
### config rspan vlan

#### Purpose
Used by the source switch to configure the source setting for the RSPAN VLAN.

#### Syntax
```
config rspan vlan [vlan_name <vlan_name> | vlan_id <vlanid 1-4094>] [redirect [add | delete] port <port> | source [{add | delete} ports <portlist> [rx | tx | both]]
```

#### Description
This command configures the source and redirect setting for the RSPAN VLAN on the Switch. The output port of the RSPAN mirrored packet will use the same destination port as defined by the mirror command. The redirect command makes sure that the RSPAN VLAN packets can be egress to the redirect ports. In addition to this redirect command, the VLAN setting must be correctly configured to make the RSPAN VLAN work correctly. That is, for the intermediate switch, the redirect port must be a tagged member port of RSPAN VLAN. For the last switch, the redirect port must be either a tagged member port or an untagged member port of the RSPAN VLAN based on the users requirements. If untagged membership is specified, the RSPAN VLAN tag will be removed. The redirect function will only work when RSPAN is enabled. Multiple RSPAN VLANs can be configured with redirect settings at the same time.

**NOTE:** If RSPAN is enabled, the packets mirrored to the destination port are always added with an RSPAN VLAN tag. If mirror is enabled but RSPAN is disabled, the packets mirrored to the destination port may be in tagged form or in untagged form.

**NOTE:** Only one RSPAN VLAN can be configured with source settings.

#### Parameters
- `vlan` – Specify the RSPAN VLAN on the source switch.
- `vlan_name` – Specify RSPAN VLAN by VLAN name.
- `vlan_id` – Specify RSPAN VLAN by VLAN ID.
- `redirect` – Specify output port for the RSPAN VLAN packets.
- `source` – Specify the source settings for the RSPAN VLAN on the source switch.
- `add` – Add source ports into the RSPAN source.
- `delete` – Delete source ports from the RSPAN source.
- `ports` – Specify source portlist to add to or delete from the RSPAN source.
  - `rx` – Only monitor ingress packets.
  - `tx` – Only monitor egress packets.
  - `both` – Monitor both ingress and egress packets.

#### Restrictions
Only Administrator and Operator-level users can issue this command.

#### Example usage:
To configure the rx traffic of port 2 to port 5 mirrored and add vid tag 2:

DES-3528:5#config rspan vlan vlan_name v3 source add ports 2-5 rx

Success.

DES-3528:5#
show rspan

Purpose  
Used to display RSPAN configuration.

Syntax  
show rspan {{vlan_name <vlan_name> | vlan_id <vlanid 1-4094>}}

Description  
This command displays the RSPAN configuration.

Parameters  
- vlan_name – Specify the RSPAN VLAN by VLAN name.
- vlan_id – Specify the RSPAN VLAN by VLAN ID.

Restrictions  
None.

Example usage:
To display special setting:

DES-3528:5#show rspan vlan_id 63

Command: show rspan vlan_id 63

RSPAN : Enabled

RSPAN VLAN ID : 63

-------------------

Source Ports
RX          : 2-5
TX          : 2-5

Total RSPAN VLAN:1

DES-3528:5#
STATIC MAC-BASED VLAN COMMANDS

The Static MAC-Based VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create mac_based_vlan</td>
<td>mac_address &lt;macaddr&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>delete mac_based_vlan</td>
<td>{mac_address &lt;macaddr&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show mac_based_vlan</td>
<td>{mac_address &lt;macaddr&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create mac_based_vlan**

**Purpose**

Used to create a static MAC-based VLAN entry.

**Syntax**

```
create mac_based_vlan mac_address <macaddr> [vlan <vlan_name 32> | vlanid <vlanid 1-4094>]
```

**Description**

This command only needs to be supported by the model which supports MAC-based VLAN. The user can use this command to create a static MAC-based VLAN entry. When a MAC-based VLAN entry is created for a user, the traffic from this user will be able to be serviced under the specified VLAN regardless of the authentication function operated on this port. There is a global limitation of the maximum entries supported for the static MAC-based entry.

**Parameters**

- `mac_address` – The MAC address.
- `vlan` – The VLAN to be associated with the MAC address.
- `vlanid` - Specifies the VLAN by VLAN ID.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage**

To create a MAC-based VLAN entry:

```
DES-3528:5# create mac_based_vlan mac_address 00-00-00-00-00-01 vlan default
Command: create mac_based_vlan mac_address 00-00-00-00-00-01 vlan default
Success.
DES-3528:5#
```
**delete mac_based_vlan**

**Purpose**  
Used to delete the static MAC-based VLAN entry.

**Syntax**  
`delete mac_based_vlan {mac_address <macaddr> [vlan <vlan_name 32> | vlanid <vlanid 1-4094>]}`

**Description**  
This command is used to delete a database entry. If the MAC address and VLAN is not specified, all static entries associated with the port will be removed.

**Parameters**  
- `mac_address` – The MAC address.
- `vlan` – The VLAN to be associated with the MAC address.
- `vlanid` – Specifies the VLAN by VLAN ID.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

**Example usage**

To delete a static MAC-based VLAN entry:

```
DES-3528:5#delete mac_based_vlan mac_address 00-00-00-00-00-01 vlan default
Command: delete mac_based_vlan mac mac_address 00-00-00-00-00-01 vlan default
Success.
DES-3528:5#
```

**show mac_based_vlan**

**Purpose**  
Used to show the static or dynamic MAC-based VLAN entry.

**Syntax**  
`show mac_based_vlan {mac_address <macaddr> | [vlan <vlan_name 32> | vlanid <vlanid 1-4094>]}`

**Description**  
This command is used to display the static or dynamic MAC-Based VLAN entry.

**Parameters**  
- `mac` – The MAC address.
- `vlan` – The VLAN to be associated with the MAC address.
- `vlanid` – Specifies the VLAN by VLAN ID.

**Restrictions**  
None.

**Example usage**

To display the static or dynamic MAC-based VLAN entry:

```
DES-3528:5#show mac_based_vlan
Command: show mac_based_vlan

MAC Address       VLAN        Status         Type
-------------   -----------  -------------  ------------
00-80-e0-14-a7-57   200        Active        Static
00-80-c2-33-c3-45   200        Inactive      Static
00-80-c2-33-c3-45   300        Active        Mac_based Access Control
00-80-c2-33-c3-90   400        Active        802.1x
00-a2-44-17-32-98   500        Active        JWAC

Total Entries : 5

DES-3528:5#
```
The Simple RED commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable sred</td>
<td></td>
</tr>
<tr>
<td>disable sred</td>
<td></td>
</tr>
<tr>
<td>config sred</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show sred</td>
<td>{ &lt;portlist&gt;</td>
</tr>
<tr>
<td>show sred drop_counter</td>
<td>{&lt;portlist&gt;}</td>
</tr>
<tr>
<td>config dscp trust</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show dscp trust</td>
<td>{&lt;portlist&gt;}</td>
</tr>
<tr>
<td>config dscp map</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show dscp map</td>
<td>{ &lt;portlist&gt;</td>
</tr>
<tr>
<td>config 802.1p map</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show 802.1p map</td>
<td>{ &lt;portlist&gt;}</td>
</tr>
<tr>
<td>1p_color</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable sred**

**Purpose**

Used to enable the simple RED function.

**Syntax**

`enable sred`

**Description**

This command is used to enable the sRED function. By default, sRED is disabled.

**Parameters**

None.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage**

To enable sred:

```
DES-3528:5#enable sred
Command: enable sred
Success.
```

DES-3528:5#
disable sred

**Purpose**  
Used to disable the simple RED function.

**Syntax**  
disable sred

**Description**  
This command is used to disable the sRED function.

**Parameters**  
None.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

Example usage

To disable sred:

```
DES-3528:5#disable sred
Command: disable sred
Success.
DES-3528:5#
```

config sred

**Purpose**  
Used to config the simple RED paremeter.

**Syntax**  
config sred [<portlist> | all] [<class_id 0-7> | all] { threshold {low <value 0-100> | high <value 0-100>} | drop_rate {low <value 1-8> | high <value 1-8>} | drop_green [enable | disable]}(1)

**Description**  
This command is used to onfigure sRED threshold per port or per port per queue.

**Parameters**
- **portlist** – A range of ports to config.
- **class_id** – This specifies which of the 8 hardware CoS queues the config sred command will apply to.
- **threshold** – low – low threshold that specifies the percent of space utilized. By default, the value is 60. The range is 0 to 100.
  - high – high threshold that specifies the percent of queue space utilized. By default, the value is 80. The range is 0 to 100.
- **drop_rate** – low – probabilistic drop rate if above the low threshold. By default, the value is 1.
  - high – probabilistic drop rate if above the high threshold. By default, the value is 1.
- **drop_green** – disable – probabilistic drop red colored packets if the queue depth is above the low threshold, and probabilistic drop yellow colored packets if the queue depth is above the high threshold. By default, if the option is not specified, the setting is disable.
  - enable – probabilistic drop yellow and red colored packets if the queue depth is above the low threshold, and probabilistic drop green colored packets if the queue depth is above the high threshold.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

NOTE: There are 8 drop rates:

- 1  100%
- 2  6.25%
- 3  3.125%
- 4  1.5625%
- 5  0.78125%
- 6  0.390625%
- 7  0.1953125%
- 8  0.09765625%
Example usage

To configure sred:

```
DES-3528:5#config sred all all threshold low 64 high 80 drop_rate low 8 high 8 drop_green disable
Command: config sred all all threshold low 64 high 80 drop_rate low 8 high 8 drop_green disable
Success.
DES-3528:5#
```

show sred

**Purpose**
Used to display the simple RED configure parameter.

**Syntax**
```
show sred { <portlist>{ <class_id 0-7>}}
```

**Description**
This command displays the current threshold(per port and per queue) parameters in use on the switch.

**Parameters**
- `portlist` – A range of ports to show.
- `class_id` – This specifies which of the n+1 hardware CoS queues the config sred command will apply to.

**Restrictions**
None.

Example usage

To show sred:

```
DES-3528:5#show sred
Command: show sred

Simple RED Globale Status: Disabled

<table>

**show sred drop_counter**

**Purpose**
Used to display the simple RED drop packet counter per port.

**Syntax**

```
show sred drop_counter {<portlist>}
```

**Description**
This command displays, for the egress port, the count of dropped packets

**Parameters**
portlist – A range of ports to show.

**Restrictions**
None.

**Example usage**

This example displays red and yellow packet drop counts for all ports:

```
DES-3528:5#show sred drop_counter
Command: show sred drop_counter

<table>
<thead>
<tr>
<th>Port</th>
<th>Yellow</th>
<th>Red</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

DES-3528:5#
```

**config dscp trust**

**Purpose**
Used to enable/disable DSCP trust state on selected portlist.

**Syntax**

```
config dscp trust [<portlist> | all] state [enable | disable]
```

**Description**
This command is used to configure port DSCP trust state. When DSCP is not trusted, 1p is trusted.

**Parameters**
portlist – A range of ports to config.
state – Enable/disable to trust DSCP. By default, DSCP trust is disabled.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage**

This config dscp trust:

```
DES-3528:5#config dscp trust 1-8 state enable
Command: config dscp trust 1-8 state enable

Success.

DES-3528:5#
```
### show dscp trust

**Purpose**  
Used to display DSCP trust state.

**Syntax**  
`show dscp trust {<portlist>}`

**Description**  
This command is used to display DSCP trust state.

**Parameters**  
`portlist` – A range of ports to display.

**Restrictions**  
None.

**Example usage**

To display the DSCP trust state:

```
DES-3528:5#show dscp_trust
Command: show dscp_trust

<table>
<thead>
<tr>
<th>Port</th>
<th>DSCP-Trust</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Disabled</td>
</tr>
<tr>
<td>2</td>

</tr>
<tr>
<td>3</td>
<td>Disabled</td>
</tr>
<tr>
<td>4</td>
<td>Disabled</td>
</tr>
<tr>
<td>5</td>
<td>Enabled</td>
</tr>
<tr>
<td>6</td>
<td>Enabled</td>
</tr>
<tr>
<td>7</td>
<td>Enabled</td>
</tr>
<tr>
<td>8</td>
<td>Enabled</td>
</tr>
</tbody>
</table>
```

### config dscp map

**Purpose**  
Used to configure mapping of DSCP to priority and packet's initial color.

**Syntax**  
`config dscp map [\<portlist\> | all] [dscp_priority <\<dscp_list\> to <priority 0-7> | dscp_dscp <\<dscp_list\> to <dscp 0-63> | dscp_color <\<dscp_list\> to [green | red | yellow\]`  

**Description**  
The mapping of DSCP to COS will be used to determine the priority of the packet (which will be then used to determine the scheduling queue) when the port is in DSCP trust state.

The mapping of dscp to color will be used to determine the initial color of the packet when the policing function of the packet is color aware and the packet is DSCP-trusted.

The DSCP-to-DSCP mapping is used in the swap of DSCP of the packet when the packet is ingressed to the port. The remaining processing of the packet will be based on the new DSCP. By default, the DSCP is mapped to the same DSCP.

**Parameters**

`portlist` – Specifies ports to be configured.

`dscp_priority` – Specifies a list of DSCP value to be mapped to a specific priority

`priority` – Specifies the result priority of mapping.

The default mapping are:

<table>
<thead>
<tr>
<th>DSCP</th>
<th>0-7</th>
<th>8-15</th>
<th>16-23</th>
<th>24-31</th>
<th>32-39</th>
<th>40-47</th>
<th>48-55</th>
<th>56-63</th>
</tr>
</thead>
<tbody>
<tr>
<td>priority</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>7</td>
</tr>
</tbody>
</table>

`dscp_dscp` – Specifies a list of DSCP value to be mapped to a specific dscp.

`dscp` – Specifies the result DSCP of mapping.

`dscp_color` – Specifies a list of DSCP value to be mapped to a specific color.

`color` – Specifies the result color of mapping.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.
Example usage

This config dscp map:

```
DES-3528:5#config dscp map 1-8 dscp_priority 1 to 1
Command: config dscp map 1-8 dscp_priority 1 to 1

Success.

DES-3528:5#
```

**show dscp map**

**Purpose**
Used to display the DSCP map configure parameter.

**Syntax**
```
show dscp map { <portlist> } [dscp_priority | dscp_dscp | dscp_color] {dscp <dscp_list>}
```

**Description**
This command is used to show DSCP trusted portlist and mapped color, priority and DSCP.

**Parameters**
- **portlist** – Specifies a range of ports to display.
- **dscp** – Specifies DSCP value that will be mapped.

**Restrictions**
None.

Example usage

This show dscp map:

```
DES-3528:5#show dscp map dscp_color
Command: show dscp map dscp_color

DSCP to Color mapping
Port 1
  DSCP 0 – 7 is mapped to Green
  DSCP 8 – 15, 17 is mapped to Yellow
  DSCP 16, 18 – 63 is mapped to Red

DES-3528:5#
```

**config 802.1p map**

**Purpose**
Used to configure mapping of 1p to packet’s initial color.

**Syntax**
```
config 802.1p map [<portlist> | all] 1p_color [priority_list] to [green | red | yellow]
```

**Description**
This command is used to configure mapping of 1p to packet’s initial color.

The mapping of 1p to color will be used to determine the initial color of the packet, when the policing function of the packet is color aware and the packet is 1p-trusted.

**Parameters**
- **portlist** – A range of ports to configure.
- **priority** – Source priority of incoming packets.
- **color** – Mapped color for packet, default value is green

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage

This config 802.1p map:
DES-3528:5# config 802.1p map 1-8 1p_color 1 to red
Command: config 802.1p map 1-8 1p_color 1 to red
Success.

DES-3528:5#

**show 802.1p map**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the 1p to color mapping</th>

</table>
| show mld_snooping statistic counter | [vlan <vlan_name 32> | vlanid <vidlist> | ports <portlist>]
| clear mld_snooping statistic counter | |
| config mld_snooping data_driven_learning | [all | vlan_name <vlan_name> | vlanid <vidlist> | state [enable | disable] | aged_out [enable | disable] | expiry_time <sec 1-65535>](1) |
| config mld_snooping data_driven_learning max_learned_entry | <value 1-1024> |
Each command is listed, in detail, in the following sections.

**clear mld_snooping**

**Parameters**

- `data_driven_group`:
  - `[ all | [vlan_name <vlan_name> | vlanid <vidlist>] [ipaddr | all]]`

**config mld_snooping**

**Purpose**

Used to configure MLD snooping on the switch.

**Syntax**

```
config mld_snooping [ vlan <vlan_name 32> | vlanid <vidlist> | all ] { state [enable | disable] | fast_done [enable | disable] | report_suppression [enable | disable] } (1)
```

**Description**

This command configures MLD snooping on the switch. If the MLD version is configured with a lower version, the higher version’s MLD Report/Leave messages will be ignored.

**Parameters**

- `vlan` – The name of the VLAN for which MLD snooping is to be configured.
- `vlanid` – The ID of the VLAN for which MLD snooping is to be configured.
- `state` – Allows you to enable or disable the MLD snooping function for the chosen VLAN.
- `fast_done` – enable or disable MLD snooping fast done function. If it is enabled, the membership is immediately removed when the system receive the MLD done message.
- `report_suppression` – When it is enabled, multiple MLD reports will be intergrated into one report before sending to the router port.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage**

To configure the MLD snooping to the default vlan with noted_timeout 250 sec and state enable:

```
DES-3528:5# config mld_snooping vlanid 1 fast_done enable state enable report_suppression disable
Command: config mld_snooping vlanid 1 fast_done enable state enable report_suppression disable
Success.
DES-3528:5#
```
**config mld_snooping querier**

**Purpose**
Used to configure the timers and the attributes of the MLD snooping querier.

**Syntax**
```
config mld_snooping querier [vlan <vlan_name 32> | vlanid <vidlist> | all ] { query_interval <sec 1-65535> | max_response_time <sec 1-25> | robustness_variable <value 1-255> | last_listener_query_interval <sec 1-25> | state [enable | disable] | version <value 1-2>}(1)
```

**Description**
This command configures the timer in seconds between general query transmissions, the maximum time in seconds to wait for reports from listeners, and the permitted packet loss that guarantees by MLD snooping.

**Parameters**
- `vlan_name` – The name of the VLAN for which MLD snooping is to be configured.
- `query_interval` – Specifies the amount of time in seconds between general query transmissions. The default setting is 125 seconds.
- `max_response_time` – The maximum time in seconds to wait for reports from listeners. The default setting is 10 seconds.
- `robustness_variable` – Provides fine-tuning to allow for expected packet loss on a subnet. The value of the robustness variable is used in calculating the following MLD message intervals:
  - `group listener interval` – Amount of time that must pass before a multicast router decides there are no more listeners of a group on a network. This interval is calculated as follows: `(robustness variable * query interval) + (1 * query response interval)`.  
  - `other querier present interval` – Amount of time that must pass before a multicast router decides that there is no longer another multicast router that is the querier. This interval is calculated as follows: `(robustness variable * query interval) + (0.5 * query response interval)`.  
  - `last listener query count` – Number of group-specific queries sent before the router assumes there are no local listeners of a group. The default number is the value of the robustness variable.

**Restrictions**
By default, the robustness variable is set to 2. You might want to increase this value if you expect a subnet to be lossy.

**Example usage**
To configure the MLD snooping querier query interval to 125 secs and state enable:

```
DES-3528:5#config mld_snooping querier vlan default query_interval 125 state enable
Command: config mld_snooping querier vlan default query_interval 125 state enable
Success.
DES-3528:5#
```
config mld_snooping mrouter_ports

Purpose
Used to configure ports as router ports.

Syntax
config mld_snooping mrouter_ports [vlan <vlan_name 32> | vlanid <vidlist>] [add | delete] <portlist>

Description
This command allows you to designate a range of ports as being connected to multicast-enabled routers. This will ensure that all packets sent to VLAN with the specified router port list, will be forwarded to the port list, regardless of protocols.

Parameters
- vlan_name – The name of the VLAN for which MLD snooping is to be configured.
- add | delete – Specifies to add or delete the router ports.
- portlist – Specifies a range of ports to be configured.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage
To set up port range 1-10 to be static router ports:

DES-3528:5#config mld_snooping mrouter_ports vlan default add 1-10
Command: config mld_snooping mrouter_ports vlan default add 1-10
Success.

DES-3528:5#

config mld_snooping mrouter_ports_forbidden

Purpose
Used to configure ports as forbidden router ports.

Syntax
config mld_snooping mrouter_ports_forbidden [vlan <vlan_name 32> | vlanid <vidlist>] [add | delete] <portlist>

Description
This command allows you to designate a range of ports that are forbidden to connect to multicast-enabled routers. This ensures that the forbidden router port will not propagate routing packets out.

Parameters
- vlan_name – The name of the VLAN for which MLD snooping is to be configured.
- add | delete – Specifies to add or delete the router ports.
- portlist – Specifies a range of ports to be configured.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage
To set up port range 1-10 to static router ports:

DES-3528:5#config mld_snooping mrouter_ports_forbidden vlan default add 1-10
Command: config mld_snooping mrouter_ports_forbidden vlan default add 1-10
Success.

DES-3528:5#
### enable mld_snooping

**Purpose** Used to enable MLD snooping on the switch.

**Syntax** `enable mld_snooping`

**Description** This command allows you to enable MLD snooping on the switch.

**Parameters** None.

**Restrictions** Only Administrator and Operator-level users can issue this command.

**Example usage**

To enable MLD snooping on the switch:

```
DES-3528:5#enable mld_snooping
Command: enable mld_snooping
Success.
DES-3528:5#
```

### disable mld_snooping

**Purpose** Used to disable MLD snooping on the switch.

**Syntax** `disable mld_snooping`

**Description** This command disables MLD snooping on the switch. Disabling MLD snooping allows all MLD and IPv6 multicast traffic to flood within all IPv6 interfaces.

**Parameters** None.

**Restrictions** Only Administrator and Operator-level users can issue this command.

**Example usage**

To disable MLD snooping on the switch:

```
DES-3528:5#disable mld_snooping
Command: disable mld_snooping
Success.
DES-3528:5#
```

### show mld_snooping

**Purpose** Used to display the current status of MLD snooping on the switch.

**Syntax** `show mld_snooping {vlan <vlan_name 32> }`

**Description** This command will display the current MLD snooping configuration on the switch.

**Parameters**

- `vlan_name` – The name of the VLAN for which you want to view the MLD snooping configuration.

  If no parameter specified, the system will display all current MLD snooping configurations.

**Restrictions** None.

**Example usage**

To show MLD snooping on the switch:
show mld_snooping group

Purpose
Used to display the current MLD snooping group configuration on the switch.

Syntax
show mld_snooping group {
{<vlan <vlan_name 32> | vlanid <vidlist> | ports <portlist>}
{<ipv6addr>}
{data_driven}}

Description
This command displays the current MLD snooping group configuration on the switch.

Parameters
- <vlan_name 32> – The name of the VLAN for which you want to view the MLD snooping configuration. If no parameter is specified, the system will display all current MLD snooping group.
- <vidlist> – The VIDs of the VLAN for which MLD snooping is to be configured.
- <portlist> – The list of ports for which to view MLD snooping group information.
- <ipv6addr> – To view the information of this specified group.
- data_driven – To view the groups learnt by data driven only.

Restrictions
None.

Example usage
To show MLD snooping group on the switch:
show mld_snooping group

Source/Group : 2004::2/FF1E::3
VLAN Name/VID : default/1
Member Ports : 1-2
UP Time : 127

Router Ports : 24
UP Time : 1335
Expiry Time : 120
Filter Mode : EXCLUDE

show mld_snooping mrouter_ports

Purpose
Used to display the currently configured router ports on the switch.

Syntax
show mld_snooping mrouter_ports [vlan <vlan_name 32> | vlanid <vidlist> | all ]
[[static | dynamic | forbidden]]

Description
This command displays the currently configured router ports on the switch.

Parameters
vlan_name – The name of the VLAN for which you want to view the MLD snooping configuration.
static – Displays router ports that have been statically configured.
dynamic – Displays router ports that have been dynamically configured.
forbidden – Displays forbidden router ports that have been statically configured.
If no parameter specified, the system will display all currently configured router ports on the switch.

Restrictions
None.
Example usage
To display the router ports on the switch:

```
DES-3528:5# show mld_snooping mrouter_ports all
Command: show mld_snooping mrouter_ports all

VLAN Name                : default
Static Router Port       : T1
Dynamic Router Port      :
    Router IP      :
    Forbidden Router Port :

VLAN Name                : VLAN2
Static Router Port       :
Dynamic Router Port      :
    Router IP      :
    Forbidden Router Port :

Total Entries: 2
DES-3528:5#
```

**config mld_snooping rate_limit**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the MLD snooping rate limit on ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config mld_snooping rate_limit [ports &lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command configures the MLD snooping rate limit on ports.</td>
</tr>
<tr>
<td>Parameters</td>
<td>ports – A port number or a range of ports for you to configure the MLD snooping rate limited. vlanid – The ID of the VLAN for which MLD snooping is to be configured. rate_limit - Configures the rate of MLD control packet that the switch can process on a specific port. The rate is specified in packet per second. The packet that exceeds the limited rate will be dropped. The default setting is no_limit.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage
To configure MLD snooping rate limit:

```
DES-3528:5# config mld_snooping rate_limit port 1-4 500
Command: config mld_snooping rate_limit ports 1-4 500

Success.

DES-3528:5#
```
### show mld_snooping rate_limit

**Purpose**
Used to display the MLD snooping rate limit on ports.

**Syntax**
```
show mld_snooping rate_limit [ports <portlist> | vlanid <vidlist>]
```

**Description**
This command displays the MLD snooping rate limit on ports.

**Parameters**
- `ports` – A port number or a range of ports for you to view the MLD snooping rate limited.
- `vlanid` – The ID of the VLAN for which MLD snooping is to be displayed.

**Restrictions**
None.

**Example usage**
To display the MLD snooping rate limit:
```
DES-3528:5# show mld_snooping rate_limit ports 1-4
```

**Command:**
```
show mld_snooping rate_limit ports 1-4
```

<table>
<thead>
<tr>
<th>Port</th>
<th>Rate Limitation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>500</td>

<tr>
<td>3</td>
<td>500</td>
</tr>
<tr>
<td>4</td>
<td>500</td>
</tr>
</tbody>
</table>

Total Entries: 4

```
DES-3528:5#
```

### show mld_snooping forwarding

**Purpose**
Used to display the current MLD snooping forwarding table.

**Syntax**
```
show mld_snooping forwarding {[vlan <vlan_name 32> | vlanid <vidlist>]
```

**Description**
This command displays the current MLD snooping forwarding table. It provides an easy way for user to check the list of ports that a specific source of a multicast group will be forwarded to.

**Parameters**
- `vlan` – The name of the VLAN for which you want to view MLD snooping forwarding table information. If no parameter is specified, the system will display all current MLD snooping forwarding table entries.
- `vlanid` – The ID of the VLAN for which you want to view MLD snooping forwarding table information. If no parameter is specified, the system will display all current MLD snooping forwarding table.

**Restrictions**
None.
Example usage

To display the MLD snooping rate limit:

```
DES-3528:5# show mld_snooping forwarding
Command: show mld_snooping forwarding

VLAN Name : default
Source IP : 2004::1
Multicast Group: FF1E::1
Port Member : 2,7

VLAN Name : default
Source IP : 2004::2
Multicast Group: FF1E::1
Port Member : 2,5

VLAN Name : default
Source IP : 2004::2
Multicast Group: FF1E::2
Port Member : 2,8

Total Entries : 3

DES-3528:5#
```

### create mld_snooping static_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure a MLD Snooping multicast static group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`create mld_snooping static_group [ vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to create a mld snooping static group. Member ports can be added to the static group. The static member and the dynamic member port form the member ports of a group. The static group will only take effect when MLD snooping is enabled on the VLAN. For those static member ports, the device needs to emulate the MLD protocol operation to the querier, and forward the traffic destined to the multicast group to the member ports. The device is also responsible to route the packet destined for this specific group to static member ports. The static member port will only affect V2 MLD operation. The Reserved IP multicast address 224.0.0.X must be excluded from the configured group. The VLAN must be created first before a static group can be created.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>vlan</code> – The name of the VLAN that has been configured. <code>vlanid</code> – The ID of the VLAN that has been configured. <code>ipv6addr</code> – Specifies the multicast group IP address. (for Layer 3 switch)</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>
Example usage

To create a mld snooping static group for VLAN 1, group 239.1.1.1:

```
DES-3528:5# create mld_snooping static_group vlan default FF1E::1
Command: create mld_snooping static_group vlan default FF1E::1
Success.
DES-3528:5#
```

**config mld_snooping static_group**

**Purpose**
Used to configure a MLD Snooping multicast group static member port.

**Syntax**
```
cfg mld_snooping static_group [ vlan <vlan_name 32> | vlanid <vidlist> ] <ipv6Addr> [ add | delete ] <portlist>
```

**Description**
When a port is configured as a static member port, the MLD protocol will not operate on this port. Therefore, supposed that a port is a dynamic member port learned by MLD. If this port is configured as a static member later, then the MLD protocol will stop operating on this port. The MLD protocol will resume once this port is removed from static member ports.

The static member port will only affect MLD v1 operation.

**Parameters**
- **vlan** – The name of the VLAN that has been configured.
- **vlanid** – The ID of the VLAN that has been configured.
- **ipaddr** – Specifies the multicast group IP address. (for Layer 3 switch)
- **add | delete** – Specifies to add or delete the member ports.
- **portlist** – Specifies a port number or a range of ports to be configured.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage

To unset port range 9-10 from MLD Snooping static member ports for group 239.1.1.1 on default VLAN:

```
DES-3528:5# config mld_snooping static_group vlan default FF1E::1 add 2:9-2:10
Command: config mld_snooping static_group vlan default FF1E::1 add 2:9-2:10
Success.
DES-3528:5#
```

**delete mld_snooping static_group**

**Purpose**
Used to delete a MLD Snooping multicast static group.

**Syntax**
```
delete mld_snooping static_group [ vlan <vlan_name 32> | vlanid <vidlist> ] <ipv6Addr>
```

**Description**
This command is used to delete a MLD Snooping multicast static group, and will not affect the MLD snooping dynamic member ports for a group.

**Parameters**
- **vlan** – The name of the VLAN on which the router port resides.
- **vlanid** – The ID of the VLAN on which the router port resides.
- **ipaddr** – Specifies the multicast group IP address. (for Layer 3 switch)

**Restrictions**
Only Administrator and Operator-level users can issue this command.
Example usage

To unset port range 9-10 from MLD Snooping static member ports for group 239.1.1.1 on default VLAN:

```
DES-3528:5# delete mld_snooping static_group vlan default FF1E::1
Command: delete mld_snooping static_group vlan default FF1E::1
Success.
DES-3528:5#
```

### show mld_snooping static_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display a MLD Snooping multicast group static member port.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show mld_snooping static_group {[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display a MLD Snooping multicast group static member port.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>vlan</code> – The name of the VLAN on which the router port resides.</td>
</tr>
<tr>
<td></td>
<td><code>vlanid</code> – The ID of the VLAN on which the router port resides.</td>
</tr>
<tr>
<td></td>
<td><code>ipv6addr</code> – Specifies the multicast group IP address. (for Layer 3 switch)</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage

To display all the MLD snooping static groups:

```
DES-3528:5# show mld_snooping static_group
Command: show mld_snooping static_group

VLAN ID/Name    IP Address    Static Member Ports
---------------  --------------  ------------------------
1 / Default     FF1E ::1     2:9-2:10

Total Entries : 1

DES-3528:5#
```

### show mld_snooping statistic counter

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display a MLD Snooping statistics counter.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show mld_snooping statistic counter {vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the statistics counter for MLD protocol packets that are received by the switch since MLD Snooping is enabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>vlan</code> – The name of the VLAN on which the router port resides.</td>
</tr>
<tr>
<td></td>
<td><code>vlanid</code> – The ID of the VLAN on which the router port resides.</td>
</tr>
<tr>
<td></td>
<td><code>ports</code> – Specifies a port number or a range of ports to be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>
Example usage
To display MLD Snooping statistic counter:

```
DES-3528:5# show mld_snooping statistic counter vlanid 1
Command: show mld_snooping statistic counter vlanid 1

VLAN Name : Default
-----------------------------------------------

```

```
DES-3528:5#
```

clear mld_snooping statistic counter

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to clear the current MLD snooping statistic on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>clear mld_snooping statistic counter</td>
</tr>
<tr>
<td>Description</td>
<td>All MLD snooping statistic counters will be cleared.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To clear IGMP snooping statistic counter:
DES-3528:5# clear mld_snooping statistic counter
Command: clear mld_snooping statistic counter
Success.
DES-3528:5#

cfg mld_snooping data_driven_learning

Purpose
Used to configure the data driven learning of a MLD snooping group.

Syntax
config mld_snooping data_driven_learning [all | vlan_name <vlan_name> | vlanid <vidlist>] { state [enable | disable] | aged_out [enable | disable ] | expiry_time <sec 1-65535>} )

Description
This command is used to configure the data driven learning of a MLD snooping group.

When data-driven learning is enabled for the VLAN, the switch receives the IP multicast traffic on this VLAN, and a MLD snooping group will be created. The learning of an entry is not activated by MLD membership registration, but by the traffic. For an ordinary MLD snooping entry, the MLD protocol will take care that the ageing out of the entry. For a data-driven entry, the entry can be specified so that it doesn’t age out or age out by the aged timer.

When data driven learning is enabled, and data driven table is not full, the multicast filtering mode for all ports are ignored. The multicast packets will be forwarded to router ports. If the data driven learning table is full, the multicast packets will be forwarded according to the multicast filtering mode.

NOTE: If a data-driven group is created and MLD member ports are learned later, the entry will become an ordinary MLD snooping entry. That is, the ageing out mechanism will follow the ordinary MLD snooping entry.

Parameters

- vlan_name <vlan_name> – The name of the VLAN for which MLD snooping data driven learning is to be configured.
- vlanid <vidlist> – The VID of the VLAN for which MLD snooping data driven learning is to be configured.
- state [enable | disable] – Allows users to enable or disable MLD snooping data driven learning for the specified VLAN.
- aged_out [enable | disable] – Allows users to enable or disable the aged_out time of the MLD Snooping data driven learning for the specified VLAN.
- expiry_time <second> – Allows users to set the time that an MLD Snooping data driven learning group will expire for the specified VLAN.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To enable data driven learning on VLAN default:

DES-3528:5# config mld_snooping data_driven_learning vlan_name default state enable aged_out enable expiry_time 270

Command: config mld_snooping data_driven_learning vlan_name default state enable aged_out enable expiry_time 270
Success.
DES-3528:5#
### config mld_snooping data_driven_learning max_learned_entry

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the max number of groups that can be learned by data driven.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config mld_snooping data_driven_learning max_learned_entry &lt;value 1-1024&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the maximum number of groups that can be learned by data driven. When the table is full, the system will stop learning the new data-driven groups. Traffic for the new groups will be dropped.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;value 1-1024&gt;</code> – The max number of groups that can be learned by data driven.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To configure the max number of groups that can be learned by data driven:

```
DES-3528:5#config mld_snooping data_driven_learning max_learned_entry 100
Command: config mld_snooping data_driven_learning max_learned_entry 100
Success.
DES-3528:5#
```

### clear mld_snooping data_driven_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete the MLD snooping group learned by data driven.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`clear mld_snooping data_driven_group [ all</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete the MLD snooping group learned by data driven.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>all</code> – Delete all groups learnt by data driven.</td>
</tr>
<tr>
<td></td>
<td><code>vlan_name &lt;vlan_name 32&gt;</code> – The name of the VLAN for which MLD snooping data driven learning group is to be deleted.</td>
</tr>
<tr>
<td></td>
<td><code>vlanid &lt;vidlist&gt;</code> – The VID of the VLAN for which MLD snooping data driven learning group is to be deleted.</td>
</tr>
<tr>
<td></td>
<td><code>ipv6addr &gt;</code> – The group address for which MLD snooping data driven learning group is to be deleted on the specified VLAN.</td>
</tr>
<tr>
<td></td>
<td><code>all</code> – All groups learnt by data driven on the specified VLAN will be deleted.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To delete all groups learnt by data driven on VLAN default:

```
DES-3528:5#clear mld_snooping data_driven_group vlan_name default all
Command: clear mld_snooping data_driven_group vlan_name default all
Success.
DES-3528:5#
```
MAC-BASED ACCESS CONTROL COMMANDS LIST

The MAC-based Access Control Commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable mac_based_access_control</td>
<td></td>
</tr>
<tr>
<td>disable mac_based_access_control</td>
<td></td>
</tr>
<tr>
<td>config mac_based_access_control password</td>
<td>&lt;passwd 16&gt;</td>
</tr>
<tr>
<td>config mac_based_access_control method</td>
<td>[local</td>
</tr>
<tr>
<td>config mac_based_access_control guest_vlan ports</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>config mac_based_access_control ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>create mac_based_access_control</td>
<td>[guest_vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>delete mac_based_access_control</td>
<td>[guest_vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>clear mac_based_access_control auth_state</td>
<td>[ports [all</td>
</tr>
<tr>
<td>create mac_based_access_control_local mac</td>
<td>&lt;macaddr&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config mac_based_access_control_local mac</td>
<td>&lt;macaddr&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>delete mac_based_access_control_local</td>
<td>[mac &lt;macaddr&gt;</td>
</tr>
<tr>
<td>show mac_based_access_control</td>
<td>{ports {&lt;portlist&gt; }}</td>
</tr>
<tr>
<td>show mac_based_access_control_local</td>
<td>{{mac&lt;macaddr&gt;</td>
</tr>
<tr>
<td>show mac_based_access_control auth_state</td>
<td>ports &lt;portlist&gt;</td>
</tr>
<tr>
<td>config mac_based_access_control auth_failover</td>
<td>[enable</td>
</tr>
<tr>
<td>config mac_based_access_control authorization network</td>
<td>[radius [enable</td>
</tr>
<tr>
<td>config mac_based_access_control max_users</td>
<td>[&lt;value 1 - 1000&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
enable mac_based_access_control

Purpose
Used to enable MAC-based Access Control.

Syntax
enable mac_based_access_control

Description
This command will enable the MAC-based AC function.

Parameters
None.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage
To enable MAC-based AC function:

DESS-3528:5#enable mac_based_access_control
Command: enable mac_based_access_control
Success.
DESS-3528:5#

disable mac_based_access_control

Purpose
Used to disable MAC-based AC.

Syntax
disable mac_based_access_control

Description
This command will disable the MAC-based AC function.

Parameters
None.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage
To disable MAC-based AC function:

DESS-3528:5#disable mac_based_access_control
Command: disable mac_based_access_control
Success.
DESS-3528:5#

config mac_based_access_control password

Purpose
Used to configure the password of the MAC-based AC.

Syntax
config mac_based_access_control password <passwd 16>

Description
This command will set the password that will be used for authentication via RADIUS server.

Parameters
<passwd 16> – In RADIUS mode, the switch communicate with RADIUS server use the password. The maximum length of the key is 16.

Restrictions
Only Administrator and Operator-level users can issue this command.
Example usage

To configure MAC-based AC password:

```
DES-3528:5# config mac_based_access_control password switch
Command: config mac_based_access_control password switch
Success.
DES-3528:5#
```

`config mac_based_access_control method`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Use to configure the MAC-based AC authenticating method.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mac_based_access_control method [local</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to specify to authenticate via local database or via RADIUS server.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>local</code> – Specify to authenticate via local database.</td>
</tr>
<tr>
<td></td>
<td><code>radius</code> – Specify to authenticate via RADIUS server.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure mac based access control authenticating method:

```
DES-3528:5# config mac_based_access_control method local
Command: config mac_based_access_control method local
Success.
DES-3528:5#
```

`config mac_based_access_control guest_vlan ports`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Use to configure the MAC-based AC guest VLAN membership.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config mac_based_access_control guest_vlan ports &lt;portlist&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to put the specified port in guest VLAN mode. For those ports that are not contained in the port list, they are in non-guest VLAN mode. For detailed information about operation of guest VLAN mode, refer to the description for <code>config mac_based_access_control port</code> command.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – When the guest VLAN is configured for a port successfully, the port will make the VLAN assignment based on the assigned VLAN and remove it from the guestvlan. If the user authentication fails, the user will stay in the guestvlan mode.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To create MAC-based AC guest VLAN:

```
DES-3528:5# create mac_based_access_control_guest_vlan default
Command: create mac_based_access_control_guest_vlan default
Success.
DES-3528:5#
```
### `config mac_based_access_control ports`

**Purpose**
Used to configure the parameter of the MAC-based AC.

**Syntax**

```plaintext
config mac_based_access_control ports [<portlist> | all] [state [enable | disable] | mode [port_based | host_based] | aging_time [infinite | <min 1–1440>]] | block_time [infinite | <sec 1–300>] | max_users [<value 1 - 1000] | no_limit](1)
```

**Description**
This command allows you to configure MAC-based AC setting.

When the MAC-based AC is enabled for a port, and the guest VLAN function for this port is disabled, the user attached to this port will not forward any packets unless the user passes authentication. The user that does not pass authentication will not be serviced by the switch. If the user passes authentication, the user will be able to forward traffic operated under the assigned VLAN configuration.

When the MAC-based AC function is enabled for a port, and the guest VLAN function for this port is enabled, it will move from the original VLAN member port, and become the member port of the guest_vlan, before the authentication process starts. After the authentication, if a valid VLAN is assigned by the RADIUS server, then this port will be removed from the guest VLAN and become the member port of the assigned VLAN.

For guest VLAN mode, if the MAC address is authorized, but no VLAN information is assigned from the RADIUS Server or the VLAN assigned by RADIUS server is invalid (e.g. the assigned VLAN is not existent), this port/MAC will be removed from the member port of the guest VLAN and become a member port of the original VLAN.

**Parameters**
- `ports` – A range of ports enable or disable mac_based_access_control function.
- `state` – Specify whether MAC-based AC function is enabled or disabled.
- `mode` – Either port_based or host_based.
  - **Port_based**: means that all users connected to a port share the first authentication result.
  - **Host_based**: means that each user can have its own authentication result. If the Switch doesn’t support MAC–Based VLAN, then the switch will not allow the option host_based for ports that are in guest vlan mode.
- `method` – Specify which authenticated method.
- `aging_time` – A time period during which an authenticated host will be kept in authenticated state. When the aging time is time–out, the host will be moved back to unauthenticated state.
- `block_time` – If a host fails to pass the authentication, the next authentication will not started within block_time unless the user clear the entry state manually.
- `max_user` – max number of authenticated clients on per port.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To config port state:

```
DES-3528:5#config mac_based_access_control ports 1 - 8 state enable
Command: config mac_based_access_control ports 1 - 8 state enable
Success.
```

To config port mode:

```
DES-3528:5#config mac_based_access_control ports 1 - 8 mode port_based
Command: config mac_based_access_control ports 1 - 8 mode port_based
Success.
```

422
### create mac_based_access_control

**Purpose**
Used to create the guest_vlan

**Syntax**
```
create mac_based_access_control [guest_vlan <vlan_name 32> | guest_vlanid <vlanid 1–4094>]
```

**Description**
This command is used to create the guest VLAN.

**Parameters**
guest_vlan – If the MAC address has failed the authentication, the port will be assigned to this vlan.

guest_vlanid – If the MAC address has failed the authentication, the port will be assigned to this vlan.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To create mac based access control guest vlan:

```
DES-3528:5# create mac_based_access_control guest_vlan default
Command: create mac_based_access_control guest_vlan default
Success.
DES-3528:5#
```

### delete mac_based_access_control

**Purpose**
Used to delete the guest vlan.

**Syntax**
```
delete mac_based_access_control [guest_vlan <vlan_name 32> | guest_vlanid <vlanid 1–4094>]
```

**Description**
This command is used to de-assign the guest VLAN. When the guest VLAN is de-assigned, the guest VLAN function is disabled.

**Parameters**
guest_vlan – Specifies the name of the guest_vlan.

guest_vlanid – Specifies the vlan_id of the guest_vlan.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To delete a guest vlan:

```
DES-3528:5# delete mac_based_access_control guest_vlan default
Command: delete mac_based_access_control guest_vlan default
Success.
DES-3528:5#
```
clear mac_based_access_control auth_state

**Purpose**
Used to reset the current state of a user. The reauthentication will be started after the user traffic is received again.

**Syntax**
clear mac_based_access_control auth_state [ports [all | portlist] | mac_addr <macaddr>]

**Description**
This command is used to clear the authentication state of a user (or port). The port (or the user) will return to unauthenticated state. All the timer associated with the port (or the user) will be reset.

**Parameters**
- **ports** – To specify the port range to delete MAC on them
- **<macaddr>** – To delete a specified host with this MAC

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To clear MAC auth_state on MAC enable ports:

```
DES-3528:5#clear mac_based_access_control auth_state ports all
Command: clear mac_based_access_control auth_state ports all
Success.
DES-3528:5#
```

create mac_based_access_control_local mac

**Purpose**
Used to create the local database entry.

**Syntax**
create mac_based_access_control_local mac <macaddr> [vlan <vlan_name 32> | vlanid <vlanid 1–4094>]

**Description**
This command is used to create a database entry.

**Parameters**
- **mac** – The MAC address that access accept by local mode
- **vlan** – If the MAC address is authorized, the port will be assigned to this vlan.
- **vlanid** – If the MAC address is authorized, the port will be assigned to this vlan.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To create a local database entry:

```
DES-3528:5#create mac_based_access_control_local mac 00–00–00–00–00–01 vlan default
Command: create mac_based_access_control_local mac 00–00–00–00–00–01 vlan default
Success.
DES-3528:5#
```
### config mac_based_access_control_local mac

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to config the local database entry.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mac_based_access_control_local mac &lt;macaddr&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to modify a database entry.</td>
</tr>
</tbody>
</table>
| Parameters | `mac` – The MAC address that access accept by local mode  
`vlan` – If the MAC address is authorized, the port will be assigned to this vlan.  
`vlanid` – If the MAC address is authorized, the port will be assigned to this vlan. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure a local database entry:

```
DES-3528:5# config mac_based_access_control_local mac 00–00–00–00–00–01 vlan default
Command: config mac_based_access_control_local mac 00–00–00–00–00–01 vlan default
Success.
DES-3528:5#
```

### delete mac_based_access_control_local

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete the local database entry.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`delete mac_based_access_control_local [mac &lt;macaddr&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete a database entry.</td>
</tr>
</tbody>
</table>
| Parameters | `mac` – Deletes the database entry by this MAC address.  
`vlan` – Deletes the database entry by this VLAN name.  
`vlanid` – Deletes the database entry by this VLAN id. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To delete the local database entry by mac address:

```
DES-3528:5# delete mac_based_access_control_local mac 00–00–00–00–00–01
Command: delete mac_based_access_control_local mac 00–00–00–00–00–01
Success.
DES-3528:5#
```

To delete the local database entry by vlan name:

```
DES-3528:5# delete mac_based_access_control_local vlan default
Command: delete mac_based_access_control_local vlan default
Success.
DES-3528:5#
```
**show mac_based_access_control**

**Purpose**
Used to display mac_based_access_control setting.

**Syntax**
```
show mac_based_access_control {ports {<portlist> }}
```

**Description**
This command is used to display mac_based_access_control settings.

**Parameters**
- `ports` – Display mac_based_access_control port state

**Restrictions**
None.

Example usage:

To display mac based access control settings:

```
DES-3528:5#show mac_based_access_control ports 1-7
Command: show mac_based_access_control ports 1:1-1:7

<table>
<thead>
<tr>
<th>Port</th>
<th>State</th>
<th>Aging Time (mins)</th>
<th>Block Time (secs)</th>
<th>Auth Mode</th>
<th>Max User</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>1:7</td>
<td>Enabled</td>
<td>1440</td>
<td>300</td>
<td>Host_based</td>
<td>128</td>
</tr>
</tbody>
</table>
```

DES-3528:5#

**show mac_based_access_control_local**

**Purpose**
Used to display mac_based_access_control local database.

**Syntax**
```
show mac_based_access_control_local {[mac <macaddr>] | [vlan <vlan_name 32> | vlanid <vlanid 1–4094>]]
```

**Description**
This command is used to display mac_based_access_control local database.

**Parameters**
- `mac` – Display mac_based_access_control local database by this MAC address
- `vlan` – Display mac_based_access_control local database by this VLAN name.
- `vlanid` – Display mac_based_access_control local database by this VLAN id.

**Restrictions**
None.

Example usage:

To display mac based access control local:
DES-3528:5# show mac_based_access_control_local
Command: show mac_based_access_control_local

<table>
<thead>
<tr>
<th>MAC Address</th>
<th>VID</th>

config mac_based_access_control auth_failover

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the MAC-based AC authentication failover function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config mac_based_access_control auth_failover [enable</td>
</tr>
<tr>
<td>Description</td>
<td>When the authentication failover is disabled and if the Radius servers are unreachable, the authentication will fail. When the authentication failover is enabled, and if the Radius servers authentication is unreachable, the local database will be used to do the authentication. The state is disabled, by default.</td>
</tr>
<tr>
<td>Parameters</td>
<td>enable – Enables the authentication database fail over.</td>
</tr>
<tr>
<td></td>
<td>disable – Disables the authentication database fail over.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the mac_based_access_control auth_failover:

DES-3528:5#config mac_based_access_control auth_failover enable
Command: config mac_based_access_control auth_failover enable
Success.

DES-3528:5#
### config mac_based_access_control authorization network

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable the accepting of authorized configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config mac_based_access_control authorization network {radius [enable</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable or disable the accepting of authorized configuration. When the authorization is enabled for MAC-AC’s radius, the authorized data assigned by the RADUIS server will be accepted if the global authorization network is enabled. When the authorization is enabled for MAC-AC’s local, the authorized data assigned by the local database will be accepted.</td>
</tr>
<tr>
<td>Parameters</td>
<td>radius – If specified to enable, the authorized data assigned by the RADUIS server will be accepted if the global authorization network is enabled. The default state is enabled. local – If specified to enable, the authorized data assigned by the local database will be accepted if the global authorization network is enabled. The default state is enabled.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the MAC-based AC authorized network:

```
DES-3528:5#config mac_based_access_control authorization network local disable
Command: config mac_based_access_control authorization network local disable
Success.
DES-3528:5#
```

### config mac_based_access_control max_users

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the maximum number of authorized clients.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config mac_based_access_control max_users [value 1-1000]</td>
</tr>
<tr>
<td>Description</td>
<td>The setting is a global limitation on the maximum number of users that can be learned via MAC-based AC. In addition to the global limitation, the per port maximum number of users is also limited. It is specified by config config mac_based_access_control ports max_users.</td>
</tr>
<tr>
<td>Parameters</td>
<td>value 1-4000 – Specifies to set the max number of authorized clients on the whole device. no_limit – Specifies to not limit the system’s maximum number of users. The default is 128.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the MAC-based AC maximum number of users:

```
DES-3528:5#config mac_based_access_control max_users 126
Command: config mac_based_access_control max_users 126
Success.
DES-3528:5#
```
MULTIPLE AUTHENTICATION COMMANDS

The Multiple Authentication commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create authentication guest_vlan</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>delete authentication guest_vlan</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config authentication guest_vlan</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config authentication ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show authentication guest_vlan</td>
<td></td>
</tr>
<tr>
<td>show authentication ports</td>
<td>(&lt;portlist&gt;)</td>
</tr>
<tr>
<td>enable authorization network</td>
<td></td>
</tr>
<tr>
<td>disable authorization network</td>
<td></td>
</tr>
<tr>
<td>show authorization</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

create authentication guest_vlan

**Purpose**
Used to assign a static VLAN to be guest VLAN.

**Syntax**
create authentication guest_vlan [vlan <vlan_name 32> | vlanid <vlanid 1-4094>]

**Description**
This command will assign a static vlan to be a guest vlan. The specific VLAN which is assigned to a guest vlan must exist first. The specific VLAN which has been assigned to a guest VLAN can’t be deleted.

For further description of this command please see description for config authentication guest_vlan ports.

**Parameters**
- vlan_name 32 – Specifies the guest vlan by VLAN name.
- vlanid – Specifies the guest vlan by VLAN ID.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To create an authentication guest VLAN:

```bash
DES-3528:5#create authentication guest_vlan vlan Accounting
Command: create authentication guest_vlan vlan Accounting
Success.
DES-3528:5#
```
### delete authentication guest_vlan

**Purpose**
Used to delete a configured authentication Guest VLAN.

**Syntax**
`delete authentication guest_vlan [vlan <vlan_name 32> | vlanid <vlanid 1-4094>]`

**Description**
This command will delete the guest VLAN settings, but will not delete the static VLAN. All ports which have an enabled guest VLAN will move to the original VLAN after the guest vlan has been deleted.

**Parameters**
- `vlan_name 32` – Specifies the guest vlan by VLAN name.
- `vlanid` – Specifies the guest vlan by VLAN ID.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete an authentication guest VLAN:

```
DES-3528:5#delete authentication guest_vlan vlan Accounting
Command: delete authentication guest_vlan vlan Accounting
Success.
DES-3528:5#
```

### config authentication guest_vlan

**Purpose**
Used to configure the security port(s) as a specific guest VLAN member.

**Syntax**
`config authentication guest_vlan [vlan <vlan_name 32> | vlanid <vlanid 1-4094>] [add | delete] ports [ <portlist> | all ]`

**Description**
This command is used to assign or remove ports to/from guest VLAN.

If Multiple-authentication mode is none: This port is doing the single authentication. The port will operate based on the guest VLAN configured by the single authentication module’s command. If the single authentication module’s guest VLAN command (for example, JWAC has no guest VLAN command) is not available, the port will not be in guest VLAN mode.

If Multiple-authentication mode is not none: The port is doing the multiple authentication. The port will be operated based on the guest VLAN configured by the common authentication command.

**Parameters**
- `vlan_name` – Assign a name of a guest VLAN. The VLAN must be an existing static VLAN.
- `vlanid` – Assign a VLAN ID of a guest VLAN. The VLAN must be an existing static VLAN.
- `add` – Specifies to add a port list to the guest VLAN.
- `delete` – Specifies to delete a port list from the guest VLAN.
- `portlist` – Specifies the configured port(s).

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure authentication guest VLAN ports:

```
DES-3528:5#config authentication guest_vlan vlan RG add ports all
Command: config authentication guest_vlan vlan RG add ports all
Success.
DES-3528:5#
```
### config authentication ports

**Purpose**
Used to configure security ports.

**Syntax**
```
config authentication ports [<portlist> | all] [auth_mode [port_based | host_based] | multi_authen_methods [none | any | dot1x_impb | impb_jwac]]
```

**Description**
This command is used to configure the authorization mode and authentication method on ports.

If Multiple-authentication mode is none: This port is doing the single authentication. The port will be operated based on the auth mode configured by the single authentication module’s command.

If Multiple-authentication mode is not none: The port is doing the multiple authentication. The port will be operated based on the auth mode configured by the multiple authentication command.

The enable/disable settings of individual authentication will always take effect. Suppose that the Multiple-authentication method of a port is set to any but MAC is disabled, JWAC and 802.1X are enabled, then the user must pass either JWAC or 802.1X method. Suppose that the Multiple-authentication method of a port is set to impb_jwac but JWAC is disabled and IMPB is enabled, then the authentication result will be the result of IMPB authentication.

**Parameters**
- **portlist** – Specifies the ports to be configured.
- **auth_mode** – Choose between Port-based or Host-based.
  - Port-based: If one of the attached hosts passes the authentication process, all hosts on the same port will be granted access to the network. If the user fails the authorization process, this port will keep trying the next authentication.
  - Host-based: Every user can be authenticated individually.
- **multi_authen_methods** – Specifies the method for multiple authentication.
  - **none** – Specifies that multiple authentication is not enabled.
  - **any** – If any one of the authentication methods (802.1x, MAC and JWAC) are passed, then authentication will be passed.
  - **dot1x_impb** – Dot1x will be verified first, and then IMPB will be verified. Both authentication methods need to be passed.
  - **impb_jwac** – IMPB will be verified first, and then JWAC will be verified. Both authentication methods need to be passed.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure the authentication mode of all ports to host based:
```
DES-3528:5#config authentication ports all auth_mode host_based
Command: config authentication ports all auth_mode host_based
Success.
```

To configure the multi-authentication method of all ports to any:
```
DES-3528:5#config authentication ports all multi_authen_methods any
Command: config authentication ports all multi_authen_methods any
Success.
```
show authentication guest_vlan

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the guest VLAN settings.</th>

CTRL+C ESC q Quit SPACE p Next Page ENTER Next Entry a All
enable authorization network

Purpose
Used to enable authorization on the Switch.

Syntax
enable authorization network

Description
This command is used to enable the authorization network. When the authorization for network is enabled, whether the authorized data assigned by the RADUIS server will be accepted will depend on the individual module’s setting. Authorization for the network is enabled by default.

Parameters
None.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To enable the authorization network:

```
DES-3528:5#enable authorization network
Command: enable authorization network
Success.
DES-3528:5#
```

disable authorization network

Purpose
Used to disable authorization on the Switch.

Syntax
disable authorization network

Description
This command is used to disable the authorization network. When the authorization for network is disabled, the authorization data assigned by the RADUIS server will not be accepted and take effect. Authorization for the network is enabled by default.

Parameters
None.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To disable the authorization network:

```
DES-3528:5#disable authorization network
Command: disable authorization network
Success.
DES-3528:5#
```

show authorization

Purpose
Used to show authorization status.

Syntax
show authorization

Description
This command displays the current authorization status on the Switch.

Parameters
None.

Restrictions
None.
Example usage:

To show authorization:

```
DES-3528:5#show authorization
Command: show authorization

Authorization for Network: Enabled

DES-3528:5#
```
WEB-BASED ACCESS CONTROL COMMANDS

The Web-based Access Control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable wac</td>
<td></td>
</tr>
<tr>
<td>disable wac</td>
<td></td>

</tr>
<tr>
<td>show wac user</td>
<td></td>
</tr>
<tr>
<td>clear wac auth_state ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### enable wac

**Purpose**

Used to enable the Web-based access control function.

**Syntax**

`enable wac`

**Description**

This command will enable the WAC function.

**Parameters**

None.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To enable the WAC function:
**disable wac**

**Purpose**
Used to disable the Web-based access control function.

**Syntax**
disable wac

**Description**
This command will disable the WAC function.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To disable the WAC function:

DES-3528:5#disable wac
Command: disable wac
Success.

DES-3528:5#

**config wac auth_failover**

**Purpose**
Used to configure WAC authorization failover.

**Syntax**
config wac auth_failover [enable | disable]

**Description**
When the authentication failover is disabled, if Radius servers are unreachable, the authentication will fail. When the authentication failover is enabled, if Radius servers authentication are unreachable, the local database will be used to do the authentication. The default state is disabled.

**Parameters**
*enable* – Enables the protocol authentication fail over.
*disable* – Disables the protocol authentication fail over.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the WAC authentication failover:

DES-3528:5#config wac auth_failover enable
Command: config wac auth_failover enable
Success.

DES-3528:5#
**config wac authorization network**

**Purpose**
Used to enable the acceptance of an authorized configuration.

**Syntax**
```
config wac authorization network {radius [enable | disable] | local [enable | disable]}
```

**Description**
This command is used to configure the acceptance of an authorized configuration.
When the authorization is enabled for WAC's radius, the authorized data assigned by the RADUIS server will be accepted if the global authorization network is also enabled.
When the authorization is enabled for WAC's local, the authorized data assigned by the local database will be accepted.

**Parameters**
- **radius** – If enabled, the authorized data assigned by the RADUIS server will be accepted if the global authorization network is enabled. The default state is enabled.
- **local** – If specified to enable, the authorized data assigned by the local database will be accepted if the global authorization network is enabled. The default state is enabled.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure WAC authorization from the local database:

```
DES-3528:5#config wac authorization network local disable
Command: config wac authorization network local disable
Success.
DES-3528:5#
```

**config wac clear_default_redirpath**

**Purpose**
Used to clear the WAC default redirect path.

**Syntax**
```
config wac clear_default_redirpath
```

**Description**
When the string is cleared, the client will not be redirected to another URL after successful authentication.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the WAC clear default redirect path:

```
DES-3528:5#config wac clear_default_redirpath
Command: config wac clear_default_redirpath
Success.
DES-3528:5#
```
## config wac default_redirpath

**Purpose**
Used to config wac default redirect path.

**Syntax**
```
config wac default_redirpath <string 128>
```

**Description**
If the default redirect path is configured, the user will be redirected to the default redirect path after successful authentication.

When the string is cleared, the client will not be redirected to another URL after successful authentication.

**Parameters**
- `<string 128>` – The URL that the client will be redirected to after successful authentication.
  The redirected path is cleared by default.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the WAC default redirect path:

```
DES-3528:5#config wac default_redirpath http://2.3.2.3
Command: config wac default_redirpath http://2.3.2.3
Success.
DES-3528:5#
```

## config wac method

**Purpose**
Used to configure the global parameter of the web authentication.

**Syntax**
```
config wac method [local | radius]
```

**Description**
This command configures the global parameter for Web authentication.

**Parameters**
- `method` – Specifies the authenticated method.
  - `local` – The authentication will be done via the local database.
  - `radius` – The authentication will be done via the RADIUS server.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the authentication method:

```
DES-3528:5#config wac method radius
Command: config wac method radius
Success.
DES-3528:5#
```
### config wac ports

**Purpose**

Used to configure WAC port level settings on the Switch.

**Syntax**

```
config wac ports [<portlist> | all] [state [enable | disable] | aging_time [infinite | <min 1-1440>] | idle_time [infinite | <min 1-1440>] | block_time [<sec 0-300>]]
```

**Description**

This command is used to configure WAC port level settings on the Switch.

**Parameters**

- **state** – Specifies to enable/disable WAC state.
- **aging_time** – A time period during which an authenticated host will be kept in authenticated state. “infinite” indicates the authenticated host on the port will not ageout. The default value is 24 hours.
- **idle_time** – A time period after which an authenticated host will be moved to an unauthenticated state if there is no traffic during that period. “infinite” indicates the host will not be removed from the authenticated state due to the idle of traffic. The default value is infinite.
- **block_time** – If a host fails to pass the authentication, it will be blocked for this period of time before it can be re-authenticated. The default value is 60 seconds.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure port WAC state:

```
DES-3528:5# config wac ports 1-8 state enable
Command: config wac ports 1:1-1:8 state enable
Success.
DES-3528:5#
```

---

### config wac switch_http_port

**Purpose**

Used to configure the TCP port that the WAC Switch listens to.

**Syntax**

```
config wac switch_http_port < tcp_port_number 1-65535> {http | https}
```

**Description**

This command is used to identify the HTTP or HTTPS packets that will be trapped to the CPU for authentication processing, or to access the login page.

If not specified, the default port number for HTTP is 80, and the default port number for HTTPS is 443.

If no protocol is specified, the protocol is HTTP.

The HTTP cannot run at TCP port 443, and the HTTPS cannot run at TCP port 80.

**Parameters**

- `<tcp_port_number 1-65535>` – A TCP port which the WAC Switch listens to and uses to finish the authenticating process.
- **http** – To specify that WAC runs HTTP protocol on this TCP port.
- **https** – To specify that WAC runs HTTPS protocol on this TCP port.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure the WAC switch http port:

```
DES-3528:5# config wac switch_http_port 8888 http
Command: config wac switch_http_port 8888 http
Success.
DES-3528:5#
```
### config wac user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the VLAN ID of the user account.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config wac user &lt;username 15&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to configure Web-based-function user setting.</td>
</tr>
<tr>
<td>Parameters</td>
<td>username – The name of the user account to be changed.</td>
</tr>
<tr>
<td></td>
<td>vlan – Authentication VLAN name.</td>
</tr>
<tr>
<td></td>
<td>clear_vlan - To clear the VLAN that is configured previously.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To configure the port state:

```
DES-3528:5#config wac user 123 vlan default
Command: config wac user 123 vlan default
Success.
```

### config wac virtual_ip

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the WAC virtual ipaddress used to accept authentication requests from an unauthenticated host.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config wac virtual_ip &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>When the virtual IP is specified, the TCP packet sent to the virtual IP will get a reply. If the virtual IP is enabled, TCP packets sent to the virtual IP or physical IPIF’s IP address will both get the a reply.</td>
</tr>
<tr>
<td></td>
<td>When the virtual IP is set 0.0.0.0, the function of virtual IP is disabled. By default, the virtual IP is 0.0.0.0. The virtual IP will not respond to any ARP request or ICMP packets.</td>
</tr>
<tr>
<td></td>
<td>To make the function work properly, the virtual IP should not be an existing IP address. It also cannot be located on the existing subnet.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;ipaddr&gt; – Specifies the IP address of the virtual IP.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To configure the WAC virtual IP:

```
DES-3528:5#config wac virtual_ip 1.1.1.1
Command: config wac virtual_ip 1.1.1.1
Success.
```
### show wac auth_state

**Purpose**
Used to display the authentication state of a port.

**Syntax**
```
show wac auth_state ports <portlist>
```

**Description**
Used to display the authentication state for ports.

If port 1 is in host-based mode:
1. Mac 00-00-00-00-00-01 is authenticated without VLAN assigned (may be the specified target VLAN does not exist or the target VLAN has not been specified), the ID of RX VLAN will be displayed (RX VLAN ID is 4004 in this example).
2. Mac 00-00-00-00-00-02 is authenticated with target VLAN assigned, the ID of target VLAN will be displayed (target VLAN ID is 1234 in this example).
3. Mac 00-00-00-00-00-03 failed to pass authentication, the VID field will be shown as "-" indicating that packets with SA 00-00-00-00-00-03 will be dropped no matter which VLAN these packets are from.
4. Mac 00-00-00-00-00-04 attempts to start authentication, the VID field will be shown as "-" until authentication completed.

If port 2 is in port-based mode:
1. Mac 00-00-00-00-00-10 is the mac which made port 2 pass authentication, mac address with "(P)" in the end indicates that this authentication is from a port in port-based mode.

If port 3 is in port-based mode:
1. Mac 00-00-00-00-00-20 attempts to start authentication, mac address with "(P)" in the end indicates the port-based mode authentication.
2. Mac 00-00-00-00-00-21 failed to pass authentication, mac address with "(P)" in the end indicates the port-based mode authentication.

**NOTE:** In port-based mode, the VLAN ID field is displayed in the same way as host-based mode.

**Parameters**
- **ports** – Specifies the list of ports whose WAC state will be displayed.

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

**Example usage:**

To display the WAC authentication state:

```
DES-3528:5# show wac auth_state ports 1-3
Command: show wac auth_state ports 1-3

<table>
<thead>
<tr>
<th>Port</th>
<th>MAC Address</th>
<th>State</th>
<th>VLAN ID</th>
<th>Assigned Priority</th>
<th>Aging Time/Block Time</th>
<th>Idle Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>00-00-00-00-00-01</td>
<td>Authenticated</td>
<td>4004</td>
<td>3</td>
<td>Infinite</td>
<td>40</td>
</tr>
<tr>
<td>1</td>
<td>00-00-00-00-00-02</td>
<td>Authenticated</td>
<td>1234</td>
<td>-</td>
<td>Infinite</td>
<td>50</td>
</tr>
<tr>
<td>1</td>
<td>00-00-00-00-00-03</td>
<td>Blocked</td>
<td>-</td>
<td>-</td>
<td>60</td>
<td>-</td>
</tr>
<tr>
<td>1</td>
<td>00-00-00-00-00-04</td>
<td>Authenticating</td>
<td>-</td>
<td>-</td>
<td>10</td>
<td>-</td>
</tr>
<tr>
<td>2</td>
<td>00-00-00-00-00-10 (P)</td>
<td>Authenticated</td>
<td>1234</td>
<td>2</td>
<td>1440</td>
<td>20</td>
</tr>
<tr>
<td>3</td>
<td>00-00-00-00-00-20 (P)</td>
<td>Authenticating</td>
<td>-</td>
<td>-</td>
<td>5</td>
<td>-</td>
</tr>
<tr>
<td>3</td>
<td>00-00-00-00-00-21 (P)</td>

DES-3528:5#
create wac user

Purpose
Used to create user account for web-based access control.

Syntax
create wac user <username 15> {vlan <vlan_name 32> | vlanid <vlanid 1-4094>}

Description
This command allows you to create account for web-base access control.
This user account is independent with login user account.

Parameters
user_name – User account for web-base access control.
vlan – Authentication vlan name.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To create a WAC account:

DES-3528:5# create wac user 123 vlan default
Command: create wac user 123 vlan default
Enter a case-sensitive new password:***
Enter the new password again for confirmation:***
Success.

DES-3528:5#

delete wac user

Purpose
Used to delete the account for Web-based access control.

Syntax
delete wac user [user <username 15> | all_user]

Description
This command allows you to delete an account.

Parameters
user_name – User account for Web-based access control.
all_users – To delete all the users.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To delete a WAC account:

DES-3528:5# delete wac user 123
Command: delete wac user 123
Success.

DES-3528:5#

show wac

Purpose
Used to display WAC authentication settings.

Syntax
show wac {ports <portlist> | all}

Description
This command allows you to display the Web authentication setting.

Parameters
ports – A range of member ports to show the status.
all – Will show the status of all the member ports.

Restrictions
None.
Example usage:

To display the WAC state:

```
DES-3528:5#show wac
Command: show wac

Web-Base Access Control
--------------------------
State                   : Enable
Method                  : Local

### show wac user

**Purpose**: Used to display the user account for web authentication.

**Syntax**: `show wac user`

**Description**: This command allows you to show web authentication account.

**Parameters**
- None.

**Restrictions**
- None.
Example usage:
To show Web authentication account:

```
DES-3528:5# show wac user
Command: show wac user

<table>
<thead>
<tr>
<th>Username</th>
<th>Password</th>
<th>VID</th>
</tr>
</thead>
<tbody>
<tr>
<td>123</td>
<td>123</td>
<td>1</td>
</tr>
</tbody>
</table>

Total Entries: 1
```

```
clear wac auth_state
Purpose Used to clear the authentication state of a port.
Syntax clear wac auth_state ports [ <portlist> | all ] { authenticated | authenticating | blocked } 
Description This command is used to clear the authentication state of a port. The port will return to an un-authenticated state. All the timers associated with the port will be reset.
Parameters
  <portlist> – Specifies the list of ports whose WAC state will be cleared.
  all – Specifies all the ports whose WAC state will be cleared.
  authenticated – Specifies to delete the host in this state.
  authenticating – Specifies to delete the host in this state.
  blocked - Specifies to delete the host in this state.
Restrictions Only Administrator and Operator-level users can issue this command.
```

Example usage:
To clear the WAC authenticated state:

```
DES-3528:5# clear wac auth_state ports 1-5
Command: clear wac auth_state ports 1-5
Success.
```

DES-3528:5#
The PoE commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config poe system</td>
<td>config poe system {units [&lt;unitlist&gt;</td>
</tr>
<tr>
<td>config poe ports</td>
<td>config poe ports {all</td>
</tr>
<tr>
<td>show poe system</td>
<td>show poe system {units &lt;unitlist&gt;}</td>
</tr>
<tr>
<td>show poe ports</td>
<td>show poe ports {&lt;portlist&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config poe system

**Purpose**
Used to configure the parameters for the POE system-wise function.

**Syntax**
```plaintext
config poe system {units [<unitlist> | all ]} {power_limit <value 37-370> | power_disconnect_method [deny_next_port | deny_low_priority_port]}(1)
```

**Description**
This command is used to configure the parameters for the whole PoE system.

**Parameters**
- **units** - Specifies the units that will be configured. If no specified units, all supported PoE units in the system will be configured.
- **power_limit** - Configures the power budget for the PoE system. The range which can be specified is determined by the system. Normally, the minimum setting is 37 W and the maximum setting is 370 W. The actual range will depend on power supply capabilities.
- **power_disconnect_method** - Configures the disconnection method that will be used when the power budget is running out. When the system attempts to supply power to a new port, if the power budget is insufficient to do this, the PoE controller will initiate a port disconnection procedure to prevent overloading the power supply. The controller uses one of the following two ways to perform the disconnection procedure.
  - **deny_next_port** - The port with the highest port number will be denied regardless of its priority.
  - **deny_low_priority_port** - If there are ports that have been supplied power but have a priority lower than the new port, the port with the lowest priority will be disconnected. This process will stop until enough power is released for the new port.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To configure the PoE system wide settings:
DES-3528P:5# config poe system power_limit 250 power_disconnect_method deny_low_priority_port
Command: config poe system power_limit 250 power_disconnect_method deny_low_priority_port
Success.
DES-3528P:5#

### config poe ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the PoE port settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>config poe ports</strong> [all</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the PoE port settings.</td>
</tr>
<tr>
<td>Parameters</td>
<td><strong>portlist</strong> – Specifies the list of ports whose setting is under configuration. <strong>state</strong> – When the state is set to disable, power will not be supplied to the powered device connected to this port. <strong>time_range</strong> - Specifies a range of the time to the port set as POE. If time range is configured, the power can only be supplied during the specified period of time. <strong>Clear_time_range</strong> – delete the setting of time range. <strong>priority</strong> – Port priority determines the priority with which the system attempts to supply the power to the ports. There are three levels of priority that can be selected, critical, high, and low. When multiple ports happen to have the same level of priority, the port ID will be used to determine the priority. The lower port ID has higher priority. The setting of the priority will affect the ordering of supplying power. Even if the disconnect_method is set to deny_low_priority_port, priority of the ports will be used by the system to manage and supply power to ports. <strong>power_limit</strong> – Configure the per-port power limit. If a port exceeds its power limit, it will be shut down. Based on 802.3af/at, there are 5 kinds of PD classes; Class 0 – 0.44<del>12.95W Class 1 – 0.44</del>3.84W Class 2 – 3.84<del>6.49W Class 3 – 6.49</del>12.95W Class 4 – 12.95W<del>29.5W The following is the power limit applied to the port for these five classes. For each class, the power limit is a little more than the power consumption range for the class. This takes the factor of the power loss on cable into account. Thus, the following are the typical values defined by the chip vendor. <strong>class_0</strong> – 15400mW <strong>class_1</strong> – 4000mW <strong>class_2</strong> – 7000mW <strong>class_3</strong> – 15400mW <strong>User define</strong> – 35000mW (only for ports 1</del>8, but ports 1-8 are only tested up to the 30W mode for the maximum power) As well as these four pre-defined settings, users can directly specify any value ranging from 1000 mW to 35000mW on port 1<del>8 and 1000mW</del>15400mW on port 9<del>24. <strong>NOTE:</strong> DES-3528P ports 1</del>8 can configure PoE up to 35W by configuring the PoE port user define value, but ports 1-8 are only tested up to the 30W mode for the maximum power. All ports can also support 802.3af (1000~15400mW).</td>
</tr>
</tbody>
</table>
**config poe ports**

**Restrictions**

Only Administrator-level users can issue this command.

Example usage:

To configure PoE ports:

```
DES-3528P:5#config poe ports 1-4 state enable priority critical power_limit class_1
Command: config poe ports 1-4 state enable priority critical power_limit class_1

Power limit has been set to  4000  (Class 1 PD upper power limit 3.84W + power loss on cable)
Success.

DES-3528P:5#config poe ports 5 state enable priority critical power_limit user_define 1000
Command: config poe ports 5 state enable priority critical power_limit user_define 1000

Power limit has been set to  1000
Success.

DES-3528P:5#
```

**show poe system**

**Purpose**

Used to display the settings and actual values of all PoE functions.

**Syntax**

```
show poe system { units <unitlist>}
```

**Description**

This command displays the settings and actual values of all PoE functions.

**Parameters**

- `<unitlist>` - Specifies the units that will be displayed.

**Restrictions**

None.

Example usage:

To display all PoE system settings:

```
DES-3528P:5#show poe system
Command: show poe system

PoE System Information
---------------------------------------------------------------
Power Limit : 250 (Watts)
Power Consumption : 0 (Watts)
Power Remained : 250 (Watts)
Power Disconnection Method : Deny Low Priority Port

If Power Disconnection Method is set to deny next port, then the system can not utilize out of its maximum power capacity. The maximum unused watt is 19W.
```

**show poe ports**

**Purpose**
Used to display the settings and actual values of the PoE ports.

**Syntax**
`show poe ports {<portlist>}`

**Description**
This command displays the settings and actual values of the PoE ports.

**Parameters**
- `<portlist>` – Specifies a list of ports to be displayed.
  
  If no parameter is specified, the system will display the status for all ports.

**Restrictions**
None.

Example usage:

To display all PoE ports:

```
DES-3528P:5#show poe ports 1-6
Command: show poe ports 1-6

<table>

**PPPOE CIRCUIT ID INSERTION COMMANDS**

The PPPOE Circuit ID Insertion commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config pppoe circuit_id_insertion state</td>
<td>[enable</td>
</tr>
<tr>
<td>show pppoe circuit_id_insertion</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config pppoe circuit_id_insertion state

**Purpose**
Used to configure the pppoe circuit id insertion state on the Switch.

**Syntax**
`config pppoe circuit_id_insertion state [enable | disable]`

**Description**
When the setting is enabled, the system will insert the circuit ID tag to the received PPPoE discover request and also the request packet if the tag is absent. While enabled it will remove the circuit ID tag from the received PPPoE offer and session confirmation packet.

The circuit ID will contain the following information:
- Client MAC address, switch IP address and port number.
- The setting is disabled by default.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the pppoe circuit_id_insertion state:

```
DES-3528:5#config pppoe circuit_id_insertion state enable
Command: config pppoe circuit_id_insertion state enable
Success.
DES-3528:5#
```

### show pppoe circuit_id_insertion

**Purpose**
Used to display the current status of the PPPoE circuit id insertion on the Switch.

**Syntax**
`show pppoe circuit_id_insertion`

**Description**
None.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To display the pppoe circuit_id_insertion state:

```
DES-3528:5#show pppoe circuit_id_insertion
Command: show pppoe circuit_id_insertion
Status: Enabled
DES-3528:5#
```
DNS RELAY COMMANDS

The DNS Relay commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config dnsr</td>
<td>[[primary</td>
</tr>
<tr>
<td>enable dnsr</td>
<td>{{cache</td>
</tr>
<tr>
<td>disable dnsr</td>
<td>{{cache</td>
</tr>
<tr>
<td>show dnsr</td>
<td>(static)</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config dnsr**

**Purpose**

Used to add or delete a static entry in the DNS resolution table

**Syntax**

config dnsr [[primary | secondary] nameserver <ipaddr> | [add | delete] static <domain_name 32> <ipaddr>]

**Description**

This command is used to add or delete a static entry in the DNS resolution table

**Parameters**

*primary* - When both primary and secondary server exist, the primary server will be used.  
*secondary* - When the primary server does not exist, the secondary server will be used.  
*nameserver <ipaddr>* - Specifies the IP address of primary or secondary name server.  
*<domain_name 32><ipaddr>* - Specifies the name of the server and IP address of the corresponding in DNS Static Table in DNS server.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the DNS relay:

```
DES-3528:5#config dnsr primary nameserver 192.168.1.1  
Command: config dnsr primary nameserver 192.168.1.1  
Success.  
DES-3528:5#  
```

**enable dnsr**

**Purpose**

Used to enable DNS relay function.

**Syntax**

enable dnsr {{cache | static}}

**Description**

This command is used to enable DNS relay function.

**Parameters**

*cache* - The buffer cache which records the name of the server and IP address of the corresponding.  
*static* - The DNS Static Table in DNS server with the name of the server and the corresponding IP address.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

Example usage:
To enable the DNS relay:

```
DES-3528:5#enable dnsr cache
Command: enable dnsr cache
Success.

DES-3528:5#
```

### disable dnsr

**Purpose**
Used to disable DNS relay function.

**Syntax**
`disable dnsr {cache | static}`

**Description**
This command is used to disable DNS relay function.

**Parameters**
- `cache` - The buffer cache which records the name of the server and IP address of the corresponding.
- `static` - The DNS Static Table in DNS server with the name of the server and IP address of the corresponding.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**

To disable the DNS relay:

```
DES-3528:5#disable dnsr cache
Command: disable dnsr cache
Success.

DES-3528:5#
```

### show dnsr

**Purpose**
Used to display the current DNS relay static table.

**Syntax**
`show dnsr {static}`

**Description**
This command is used to display the current DNS relay static table.

**Parameters**
- `{static}` - The DNS Static Table in DNS server with the name of the server and IP address.

**Restrictions**
None

**Example usage:**

To display the DNS relay:

```

```

452
DES-3528:5#show dnser

Command: show dnser

DNSR Status : Enabled
Primary Name Server : 192.168.1.1
Secondary Name Server : 0.0.0.0

POLICY ROUTE COMMANDS

The Policy Route commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create policy_route name</td>
<td>&lt;policyroute_name 32&gt;</td>
</tr>
<tr>
<td>config policy_route name</td>
<td>&lt;policyroute_name 32&gt;acl profile_id &lt;value 1-14&gt; access_id &lt;value 1-128&gt;nexthop &lt;ipaddr&gt; state [enable</td>
</tr>
<tr>
<td>delete policy_route name</td>
<td>&lt;policyroute_name 32&gt;</td>
</tr>
<tr>
<td>show policy_route</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

create policy_route name

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to add policy route rule.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>create policy_route name &lt;policyroute_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows you to create policy route and define this rule name.</td>
</tr>
<tr>
<td></td>
<td>• The ACL rule that is linked to the policy route command could not be deleted via ACL command.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;policyroute_name 32&gt; – Specifies the name of policy rule. Max length is 32 character.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To create a policy route:

```
DES-3528:5# create policy_route name engineer
Command: create policy_route name engineer
Success.

DES-3528:5#
```
**config policy_route**

**Purpose**
Used to config policy route rule.

**Syntax**
```
config policy_route name <policyroute_name 32> acl profile_id <value 1-14> access_id <value 1-128> nexthop <ipaddr> state [enable | disable]
```

**Description**
This command allows you to config the different fields for a policy route entry. You can set the state of a policy route to enable or disable.
- Create a ACL rule. If no acl rule exists, system will show an error message.
- If any ACL rule action is dropped, the packet will not be forwarded, and not implement policy route.
- Packets pass from policy route, its TTL will decrease 1
- If user delete a ACL rule that is linked a policy rule, system will pop error message.

**Parameters**
- **name** – Specifies the name of policy rule.
- **profile_id** – Specifies the ACL profile ID.
- **access_id** – Specifies the ACL access ID.
- **nexthop** – Specifies the next hop IP address.
- **state** – Enables or disables the rule.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To config a policy route:

```
DES-3528:5# config policy_route name engineer acl profile_id 1 access_id 1 nexthop 20.1.1.100 state enable
Command: config policy_route name engineer acl profile_id 1 access_id 1 nexthop 20.1.1.100 state enable
Success.
```

**delete policy_route**

**Purpose**
Used to delete policy route rule.

**Syntax**
```
delete policy_route name <policyroute_name 32>
```

**Description**
This command is used to delete policy route rule.

**Parameters**
- **policyroute_name 32** – Specifies the name of policy rule.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete a policy route:

```
DES-3528:5# delete policy_route name engineer
Command: delete policy_route name engineer
Success.
```

455
### show policy_route

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display policy route rule.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show policy_route</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display policy route rule.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To show available policy routes:

```
DES-3528:5# show policy_route
Command: show policy_route

Policy Routing Table

<table>
<thead>
<tr>
<th>Name</th>
<th>Profile ID</th>
<th>Access ID</th>
<th>Nexthop</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>
<td>engineer</td>
<td>1</td>
<td>1</td>
<td>20.1.1.100</td>
<td>Enabled</td>
</tr>
</tbody>
</table>

Total Entries : 1

DES-3528:5#
```
The BPDU Attack Protection commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

**NOTE:** The BPDU Attack Protection commands and STP Function commands are mutually exclusively. Therefore, when the STP function is enabled on a particular port, BPDU Attack Protection cannot be enabled. If BPDU Attack Protection function is enabled on a port, BPDU cannot be forwarded.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config bpdu_protection ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config bpdu_protection recovery_timer</td>
<td>[&lt;sec 60-1000000&gt;</td>
</tr>
<tr>
<td>config bpdu_protection</td>
<td>[trap</td>
</tr>
<tr>
<td>enable bpdu_protection</td>
<td></td>
</tr>
<tr>
<td>disable bpdu_protection</td>
<td></td>
</tr>
<tr>
<td>show bpdu_protection</td>
<td>{ports {&lt;portlist&gt; }}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config bpdu_protection ports

**Purpose**
Used to configure the BPDU Attack Protection state and mode of a port.

**Syntax**
```
cfgbpoudi_protection ports [<portlist> | all ] [state [enable | disable] | mode [drop | block | disable]] (1)
```

**Description**
This command is used to setup the BPDU Attack Protection function for the ports on the switch.

**Parameters**
- **portlist** – Specifies a range of ports to be configured.
- **all** – In order to set all ports in the system, you may use the “all” parameter.
- **state** – Specifies the state of BPDU Attack Protection. The default state is disable
  - **enable** – Enables the port or ports for BPDU Attack Protection.
  - **disable** – Disables the port or ports for BPDU Attack Protection.
- **mode** – Specifies the BPDU Attack Protection mode. The default mode is drop.
  - **drop** – Will drop all RX BPDU packets when the port enters under_attack state.
  - **block** – Will drop all RX packets (include BPDU and normal packets) when the port enters under_attack state.
  - **disable** – Will shut down the port when the port enters under_attack state.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the BPDU Attack Protection mode to drop for port 1:
DES-3528:5# config bpdu_protection ports 1 state enable mode drop
Command: config bpdu_protection ports 1 state enable mode drop
Success.

config bpdu_protection recovery_timer

Purpose
Used to configure the BPDU Attack Protection recovery timer.

Syntax
config bpdu_protection recovery_timer [<sec 60-1000000> | infinite]

Description
When a port enters under_attack state, it can be disabled or blocked based on the configuration. The state can be recovered manually or by the auto recovery mechanism. This command is used to configure the auto-recovery timer. To manually recover the port, the user needs to disable the port first and then enable the port.

Parameters
  recover_timer – Specifies the recovery timer. The default value of recovery timer is 60.
  infinite – The port will not be auto recovered.
  <sec 60-1000000> – The timer (in seconds) used by the auto-recovery mechanism to recover the port. The valid range is 60 to 1000000.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the BPDU Attack Protection recovery timer to 120 seconds for the entire switch:

DES-3528:5# config bpdu_protection recovery_timer 120
Command: config bpdu_protection recovery_timer 120
Success.

config bpdu_protection

Purpose
Used to configure the trap or log state of BPDU Attack Protection.

Syntax
config bpdu_protection [ trap | log ] [ none | attack_detected | attack_cleared | both ]

Description
This command is used to configure trap or log state for BPDU Attack Protection function.

Parameters
  trap – Specifies the trap state. The default state is both trap and log.
  log – Specifies the log state. The default state is both trap and log.
  none – Specifies that events will not be logged or trapped for both cases.
  attack_detected – Specifies events will be logged or trapped when a BPDU attack is detected.
  attack_cleared – Specifies that events will be logged or trapped when the BPDU attack is cleared.
  both – Specifies that events will be logged or trapped for both cases.

Restrictions
Only Administrator and Operator-level users can issue this command.
Example usage:

To configure the BPDU Attack Protection trap state as both for the entire switch:

```
DES-3528:5#config bpdu_protection trap both
Command: config bpdu_protection trap both
Success.
DES-3528:5#
```

### enable bpdu_protection

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable BPDU Attack Protection globally.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable bpdu_protection</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the BPDU Attack Protection to be globally enabled on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable the BPDU Attack Protection function globally for the entire switch:

```
DES-3528:5#enable bpdu_protection
Command: enable bpdu_protection
Success.
DES-3528:5#
```

### disable bpdu_protection

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable BPDU Attack Protection globally.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable bpdu_protection</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows BPDU Attack Protection to be globally disabled on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the BPDU Attack Protection function globally for the entire switch:

```
DES-3528:5#disable bpdu_protection
Command: disable bpdu_protection
Success.
DES-3528:5#
```
### show bpdu_protection

**Purpose**
Used to display BPDU Attack Protection status.

**Syntax**
show bpdu_protection {ports {<portlist>}}

**Description**
This command is used to display BPDU Attack Protection global configuration or per port configuration and current status.

**Parameters**
- portlist – Specifies a range of ports to be displayed.

**Restrictions**
None.

**Example usage:**

To display the BPDU Attack Protection status of the entire switch:

```
DES-3528:5#show bpdu_protection
Command: show bpdu_protection

BPDU Protection Global Settings
----------------------------------------
BPDU Protection Status : Enabled
BPDU Protection Recover Time : 120 seconds
BPDU Protection Trap Status : Both
BPDU Protection Log Status : Both

DES-3528:5#
```

To display the BPDU Attack Protection status for ports 1-4 of the Switch:

```
DES-3528:5#show bpdu_protection ports 1-4
Command: show bpdu_protection ports 1-4

<table>
<thead>
<tr>
<th>Port</th>
<th>State</th>
<th>Mode</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Enabled</td>
<td>Drop</td>
<td>Normal</td>
</tr>
<tr>
<td>2</td>
<td>Disabled</td>
<td>Drop</td>
<td>Normal</td>
</tr>
<tr>
<td>3</td>
<td>Disabled</td>
<td>Drop</td>
<td>Normal</td>
</tr>
<tr>
<td>4</td>
<td>Disabled</td>
<td>Drop</td>
<td>Normal</td>
</tr>
</tbody>
</table>

DES-3528:5#
```
ETHERNET OAM COMMANDS

The Ethernet OAM commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config ethernet_oam ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show ethernet_oam ports</td>
<td>[&lt;portlist&gt;] [status</td>
</tr>
<tr>
<td>clear ethernet_oam ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config ethernet_oam ports mode

**Purpose**
Used to configure Ethernet OAM mode.

**Syntax**
```
config ethernet_oam ports [<portlist> | all] mode [active | passive]
```

**Description**
This command is used to configure ports Ethernet OAM to operate in active or passive mode. The following two actions are allowed by ports in active mode, but disallowed by ports in passive mode.
- Initiate OAM discovery and Start or stop remote loop-back.

**Parameters**
- portlist – Specifies a range of ports to be configured. Use all to specify all ports.
- mode – Specifies to operate in either active mode or passive mode. The default mode is active.

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

Example usage:

To configure port 1 to OAM mode to passive:

```
DES-3528:5#config ethernet_oam ports 1 mode passive
Command:  config ethernet_oam ports 1 mode passive
Success.
```

DES-3528:5#
**config ethernet_oam ports state**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable or disable Ethernet OAM.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config ethernet_oam ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable or disable the port’s Ethernet OAM function. Enabling a port’s OAM will cause the port to start OAM discovery. If a port is active, it initiates the discovery otherwise it reacts only to the discovery received from its peer. Disabling a port’s OAM will cause the port to send out a dying gasp event to the peer and then disconnect the established OAM link.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>portlist</code> – Specifies a range of ports to be configured. Use <code>all</code> to specify all ports. <code>state</code> – Specifies to enable or disable the OAM function. The default state is disable.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable Ethernet OAM on port 1:

```
DES-3528:5#config ethernet_oam ports 1 state enable
Command: config ethernet_oam ports 1 state enable
Success.
DES-3528:5#
```

**config ethernet_oam ports link_monitor error_symbol**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure Ethernet OAM link monitoring error symbols.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config ethernet_oam ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure ports Ethernet OAM link monitoring error symbols. The link monitoring function provides a mechanism to detect and indicate link faults under a variety of conditions. OAM monitors the statistics on the number of frame errors as well as the number of coding symbol errors. When the number of symbol errors is equal to or greater than the specified threshold in a period and the event notification state is enabled, it generates an error symbol period event to notify the remote OAM peer.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>portlist</code> – Specifies a range of ports to be configured. Use <code>all</code> to specify all ports. <code>threshold</code> – Specifies the number of symbol errors in the period that is required to be equal to or greater than in order for the event to be generated. The range is from 0 to 4294967295. The default value of threshold is 1 symbol error. <code>window</code> – The range is 1000 to 60000 ms. The default value is 1000ms. <code>notify_state</code> – Specifies to enable or disable the event notification. The default state is enable.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the error symbol threshold to 2 and period to 1000ms for port 1:

```
DES-3528:5#config ethernet_oam ports 1 link_monitor error_symbol threshold 2 window 1000 notify_state enable
Command: config ethernet_oam ports 1 link_monitor error_symbol threshold 2 window 1000 notify_state enable
Success.
DES-3528:5#
```
### `config ethernet_oam ports link_monitor error_frame`

**Purpose**: Used to configure Ethernet OAM link monitoring error frame.

**Syntax**: `config ethernet_oam ports [<<portlist>> | all ] link_monitor error_frame{ threshold <range 0 - 4294967295> | window <millisecond> | notify_state [enable | disable]](1)`

**Description**: The command used to configure ports Ethernet OAM link monitoring error frames. Link monitoring function provides a mechanism to detect and indicate link faults under a variety of conditions. OAM monitors the counter on the number of frame errors as well as the number of coding symbol errors. When the number of frame errors is equal to or greater than the specified threshold in a period and the event notification state is enabled, it generates an error frame event to notify the remote OAM peer.

**Parameters**
- `portlist` – Specifies a range of ports to be configured. Use `all` to specify all ports.
- `threshold` – Specifies the number of frame errors in the period that are required to be equal to or greater than in order for the event to be generated. The range is from 0 to 4294967295. The default value of threshold is 1 frame error.
- `window` – The range is 1000 to 60000 ms. The default value is 1000ms.
- `notify_state` – Specifies to enable or disable the event notification. The default state is enable.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

**Example usage**:

To configure the error frame threshold to 2 and period to 1000 ms for port 1:

```
DES-3528:5#config ethernet_oam ports 1 link_monitor error_frame threshold 2 window 1000 notify_state enable
Command: config ethernet_oam ports 1 link_monitor error_frame threshold 2 window 1000 notify_state enable
Success.
DES-3528:5#
```

### `config ethernet_oam ports link_monitor error_frame_seconds`

**Purpose**: Used to configure Ethernet OAM link monitoring error frame seconds.

**Syntax**: `config ethernet_oam ports [<<portlist>> | all ] link_monitor error_frame_seconds{ threshold <range 0 - 4294967295> | window <millisecond> | notify_state [enable | disable]](1)`

**Description**: This command is used to configure ports Ethernet OAM link monitoring error frame seconds. An error frame second is a one second interval wherein at least one frame error was detected. Link monitoring function provides a mechanism to detect and indicate link faults under a variety of conditions. OAM monitors the counter on the number of frame errors as well as the number of coding symbol errors. When the number of frame errors is equal to or greater than the specified threshold in a period and the event notification state is enabled, it generates an error frame second summary event to notify the remote OAM.

**Parameters**
- `portlist` – Specifies a range of ports to be configured. Use `all` to specify all ports.
- `threshold` – Specifies the number of error frame seconds in the period that are required to be equal to or greater than in order for the event to be generated. The range is from 0 to 4294967295. The default value of threshold is 1 error frame second.
- `window` – Specifies the period of error frame seconds summary event. The range is 10000ms-900000ms and the default value is 60000 ms.
- `notify_state` – Specifies to enable or disable the event notification. The default state is enable.

**Restrictions**: Only Administrator and Operator-level users can issue this command.

**Example usage**:
To configure the error frame seconds threshold to 2 and period to 10000 ms for port 1:

```
DES-3528:5#config ethernet_oam ports 1 link_monitor error_frame_seconds threshold 2 window 10000 notify_state enable
Command: config ethernet_oam ports 1 link_monitor error_frame_seconds threshold 2 window 10000 notify_state enable
Success.
DES-3528:5#
```

### config ethernet_oam ports link_monitor error_frame_period

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the Ethernet OAM link monitoring error frame period.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config ethernet_oam ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure ports Ethernet OAM link monitoring error frame period. The link monitoring function provides a mechanism to detect and indicate link faults under a variety of conditions. OAM monitors the statistics on the number of frame errors as well as the number of coding symbol errors. When the number of error frames are equal to or greater than the specified threshold in a period and the event notification state is enabled, it generates an error frame period event to notify the remote OAM.</td>
</tr>
</tbody>
</table>
| Parameters | portlist – Specifies a range of ports to be configured. Use all to specify all ports. 
threshold – Specifies the number of error frame seconds in the period that are required to be equal to or greater than in order for the event to be generated. The range is from 0 to 4294967295. The default value of the threshold is 1 error frame. 
window – Specifies the period of the error frame period event. The period is specified by a number of received frames. The range for this setting is 148 810 to 100 000 000. The default value is 1 488 100 frames. 
notify_state – Specifies to enable or disable the event notification. The default state is enable. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure the errored frame threshold to 10 and period to 1000000 for port 1 of unit 1:

```
DES-3528:5#config ethernet_oam ports 1 link_monitor error_frame_period threshold 10 window 1000000 notify_state enable
Command: config ethernet_oam ports 1 link_monitor error_frame_period threshold 10 window 1000000 notify_state enable
Success.
DES-3528:5#
```
### config ethernet_oam ports critical_link_event

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure Ethernet OAM critical link event.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config ethernet_oam ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the capability of Ethernet OAM critical link event. If the capability for an event is disabled, the port will never send out the corresponding critical link event.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>portlist</code> – Specifies a range of ports to be configured. Use <code>all</code> to specify all ports. <code>dying_gasp</code> – An unrecoverable local failure condition has occurred. <code>critical_event</code> – An unspecified critical event has occurred. <code>notify_state</code> – Specifies to enable or disable the event notification. The default state is enable.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure dying_gasp event for port 1:

```
DES-3528:5#config ethernet_oam ports 1 critical_link_event dying_gasp notify_state enable
Command: config ethernet_oam ports 1 critical_link_event dying_gasp notify_state enable
Success.
DES-3528:5#
```

### config ethernet_oam ports remote_loopback

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to start or stop Ethernet OAM remote loop-back.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config ethernet_oam ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to start or stop the remote peer to enter the Ethernet OAM remote loop-back mode. To start the remote peer to enter the remote loop-back mode, you must ensure the port is in active mode and the OAM connection is established. If the local client is already in remote loop-back mode, then it cannot apply this command.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>portlist</code> – Specifies a range of ports to be configured. Use <code>all</code> to specify all ports. <code>remote_loopback</code> – If start is specified, it will request the peer to change to the remote loop-back mode. If stop is specified, it will request the peer to change to the normal operation mode.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To start remote loop-back on port 1:

```
DES-3528:5#config ethernet_oam ports 1 remote_loopback stop
Command: config ethernet_oam ports 1 remote_loopback stop
Success.
DES-3528:5#
```
**config ethernet_oam ports received_remote_loopback**

**Purpose**
Used to configure the method to process the received Ethernet OAM remote loop-back command.

**Syntax**
```
config ethernet_oam ports [<portlist> | all] received_remote_loopback [process | ignore ]
```

**Description**
This command is used to configure the client to process or to ignore the received Ethernet OAM remote loop-back command.

In remote loop-back mode, all user traffic will not be processed. Ignoring received remote loop-back command will prevent the port from entering remote loop-back mode.

**Parameters**
- `portlist` – Specifies a range of ports to be configured. Use `all` to specify all ports.
- `received_remote_loopback` – Specifies whether to process or to ignore the received Ethernet OAM remote loop-back command. The default method is "ignore".

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure the method of processing the received remote loop-back command as "process" on port 1:
```
DES-3528:5#config ethernet_oam ports 1 received_remote_loopback process
Command: config ethernet_oam ports 1 received_remote_loopback process
Success.
DES-3528:5#
```

**show ethernet_oam ports status**

**Purpose**
Used to show primary controls and status information for Ethernet OAM.

**Syntax**
```
show ethernet_oam ports {<portlist> } status
```

**Description**
This command is used to show primary controls and status information for Ethernet OAM on specified ports.

The information includes:
1. OAM administration status: enabled or disabled
2. OAM operation status. See below values:
   - **Disable**: OAM is disabled on this port
   - **LinkFault**: The link has detected a fault and is transmitting OAMPDUs with a link fault indication.
   - **PassiveWait**: The port is passive and is waiting to see if the peer device is OAM capable.
   - **ActiveSendLocal**: The port is active and is sending local information
   - **SendLocalAndRemote**: The local port has discovered the peer but has not yet accepted or rejected the configuration of the peer.
   - **SendLocalAndRemoteOk**: The local device agrees the OAM peer entity.
   - **PeerLocallyRejected**: The local OAM entity rejects the remote peer OAM entity.
   - **PeerRemotelyRejected**: The remote OAM entity rejects the local device.
   - **Operational**: The local OAM entity learns that both it and the remote OAM entity have accepted the peering.
   - **NonOperHalfDuplex**: Since Ethernet OAM functions are not designed to work completely over half-duplex ports. This value indicates Ethernet OAM is enabled but the port is in half-duplex operation.
3. OAM mode: passive or active
4. Maximum OAMPDU size: The largest OAMPDU that the OAM entity supports. OAM entities exchange maximum OAMPDU sizes and negotiate to use the smaller of the two maximum OAMPDU sizes between the peers.
5. OAM configuration revision: The configuration revision of the OAM entity as reflected in
show ethernet_oam ports status

the latest OAMPDU sent by the OAM entity. The config revision is used by OAM entities to indicate that configuration changes have occurred, which might require the peer OAM entity to re-evaluate whether OAM peering is allowed.

OAM mode change.

(6) OAM Functions Supported: The OAM functions supported on this port. These functions include:

Unidirectional: It indicates that the OAM entity supports the transmission of OAMPDUs on links that are operating in unidirectional mode (traffic flowing in one direction only).

Loopback: It indicates that the OAM entity can initiate and respond to loop-back commands.

Link Monitoring: It indicates that the OAM entity can send and receive Event Notification OAMPDUs.

Variable: It indicates that the OAM entity can send and receive variable requests to monitor the attribute value as described in the IEEE 802.3 Clause 30 MIB

At present, only loop-back and link monitoring are supported.

Parameters

portlist – Specifies a range of ports to display.

Restrictions

None

Example usage:

To show OAM control and status information on port 1-2:

```
DES-3528:5#show ethernet_oam ports 1-2 status
Command: show ethernet_oam ports 1-2 status

Port 1
Local Client
-----------------------------------------------------------
OAM                          : Enabled
Mode                         : Passive

```

CTRL+C ESC  Q Quit  SPACE  N Next Page  ENTER  N Next Entry  A All
**show ethernet_oam ports configuration**

**Purpose**
Used to display Ethernet OAM configuration.

**Syntax**
`show ethernet_oam ports {<portlist>} configuration`

**Description**
This command is used to show port’s Ethernet OAM configurations.

**Parameters**
- `portlist` – Specifies a range of ports to display.

**Restrictions**
None.

Example usage:
To show Ethernet OAM configuration on port 1-2:

```plaintext
DES-3528:5#show ethernet_oam ports 1-2 configuration

Command: show ethernet_oam ports 1-2 configuration

Port 1
-----------------------------------------------------------
OAM                     : Enabled

Frame Period Error
   Notify State       : Enabled
   Window:            : 1000000 Frames
   Threshold          : 10 Errored Frame
```

**show ethernet_oam ports statistics**

**Purpose**
Used to show Ethernet OAM statistics.

**Syntax**
`show ethernet_oam ports {<portlist>} statistics`

**Description**
This command is used to show ports Ethernet OAM statistics information.

**Parameters**
- `portlist` – Specifies a range of ports to display.

**Restrictions**
None.

Example usage:
To show port 1 OAM statistics:

```plaintext
CTRL+C ESC 3 Quit SPACE 4 Next Page ENTER Next Entry a All
```
show ethernet_oam ports 1 statistics

Command: show ethernet_oam ports 1 statistics

show ethernet_oam event_log

Purpose
Used to show the Ethernet OAM event log.

Syntax
show ethernet_oam {<portlist>} event_log {index <value_list> }

Description
This command is used to show ports Ethernet OAM event log information. The switch can buffer 1000 event logs. The event log is different from sys-log. It provides more detailed information than sys-log. Each OAM event will be recorded in both OAM event log and syslog.

You can specify an index to show a range of events.

Parameters
portlist – Specifies a range of ports to display.
index – Specifies an index range to display.

Restrictions
None.

Example usage:
To show port 1 external OAM event:
DES-3528:5# show ethernet_oam ports 1 event_log
Command: show ethernet_oam ports 1 event_log

Port 1
----------------------------------

clear ethernet_oam ports statistics

Purpose Used to clear Ethernet OAM statistics.
Syntax clear ethernet_oam ports [-portlist] | all ] statistics
Description This command is used to clear ports Ethernet OAM statistics information.
Parameters portlist – Specifies a range of ports to clear the statistics.
Restrictions Only Administrator and Operator-level users can issue this command.

Example usage:
To clear port 1 OAM statistics:

DES-3528:5# clear ethernet_oam ports 1 statistics
Command: clear ethernet_oam ports 1 statistics
Success.

DES-3528:5#
clear ethernet_oam ports event_log

<table>
<thead>
<tr>

</table>

Each command is listed, in detail, in the following sections.
**create dhcp excluded_address**

**Purpose**
Used to specify the IP addresses that the DHCP server will not assign to DHCP client.

**Syntax**
create dhcp excluded_address begin_address < ipaddr > end_address < ipaddr >

**Description**
The DHCP server assumes that all IP addresses in a DHCP pool subnet are available for assigning to DHCP clients. This command is used to specify the IP address that the DHCP server should not assign to clients.

This command can be used multiple times in order to define multiple groups of excluded addresses.

**Parameters**
- `<ipaddr>` – Specifies the beginning and end of the IP address range.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To create the IP address that the DHCP server should not assign to clients:

```
DES-3528:5# create dhcp excluded_address begin_address 10.10.10.1 end_address 10.10.10.10
Command: create dhcp excluded_address begin_address 10.10.10.1 end_address 10.10.10.10
Success.
DES-3528:5#
```

**delete dhcp excluded_address**

**Purpose**
Used to specify the IP addresses that the DHCP server will not assign to DHCP client to be deleted.

**Syntax**
delete dhcp excluded_address [begin_address < ipaddr > end_address < ipaddr > | all]

**Description**
The DHCP server assumes that all IP addresses in a DHCP pool subnet are available for assigning to DHCP clients. This command is used to specify the IP address that the DHCP server should not assign to clients to be deleted.

**Parameters**
- `<ipaddr>` – Specifies the beginning and end of the IP address range.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To delete the IP address that the DHCP server should not assign to clients:

```
DES-3528:5# delete dhcp excluded_address begin_address 10.10.10.1 end_address 10.10.10.10
Command: delete dhcp excluded_address begin_address 10.10.10.1 end_address 10.10.10.10
Success.
DES-3528:5#
```
show dhcp excluded_address

**Purpose**
Used to display the groups of IP addresses which are excluded from the legal assigned IP address.

**Syntax**
show dhcp excluded_address

**Description**
This command shows the groups of IP addresses which are excluded from the legal assigned IP address.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To display the DHCP excluded addresses:

```
DES-3528:5#show dhcp excluded_address
Command: show dhcp excluded_address

<table>
<thead>
<tr>
<th>Index</th>
<th>Begin Address</th>
<th>End Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>10.10.10.1</td>
<td>10.10.10.10</td>
</tr>
</tbody>
</table>

Total Entries: 1
```

create dhcp pool

**Purpose**
Used to create a DHCP pool.

**Syntax**
create dhcp pool <pool name 12>

**Description**
A DHCP pool is created by specifying a name. After you create a DHCP pool, use other DHCP pool configuration commands to configure parameters for the pool. The maximum number of pools that can be configured is 4.

**Parameters**

- `<pool name 12>` – Specifies the name of the pool.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:

To create DHCP pool entry:

```
DES-3528:5#create dhcp pool accounting
Command: create dhcp pool accounting
Success.
```

delete dhcp pool

**Purpose**
Used to delete a DHCP pool entry.

**Syntax**
dele dhcp pool [pool name 12] | all

**Description**
This command is used to delete a previously created DHCP pool entry.

**Parameters**

- `<pool name 12>` – Specifies the name of the pool.

**Restrictions**
Only Administrator and Operator-level users can issue this command.
Example usage:

To delete a DHCP pool entry:

```
DES-3528:5#delete dhcp pool accounting
Command: delete dhcp pool accounting
Success.
DES-3528:5#
```

**config dhcp pool network_addr**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to specify the network for the DHCP pool.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config dhcp pool network_addr &lt;pool_name 12&gt; &lt;network_address&gt;</code></td>
</tr>
</tbody>
</table>
| Description  | This command Specifies the network for the DHCP pool. The addresses in the network are free to be assigned to the DHCP client. The prefix length specifies the number of bits that comprise the address prefix. The prefix is an alternative way of specifying the network mask of the client. The prefix length must be preceded by a forward slash (/).
When the DHCP server receives a request from the client, the server will automatically find a pool to allocate the address. If the request is relayed to the server by the intermediate device, the server will match the gateway IP address carried in the packet against the network of each DHCP pool. The pool which has the longest match will be selected.
If the request packet is not through relay, then the server will match the IP address of the IPIF that receives the request packet against the network of each DHCP pool. |
| Parameters   | `<pool name 12>` – Specifies the name of the pool. |
|             | `<network address>` – Specifies the IP address that the DHCP server may assign to clients. |
| Restrictions | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure the address range of the DHCP address pool:

```
DES-3528:5#config dhcp pool network_addr accounting 10.10.10.0/24
Command: config dhcp pool network_addr accounting 10.10.10.0/24
Success.
DES-3528:5#
```
config dhcp pool domain_name

Purpose  Used to specify the domain name for the client if the server allocates the address for the client from this pool.

Syntax  config dhcp pool domain_name <pool_name 12> {<domain_name 64>}

Description  The domain name configured here will be used as the default domain name by the client. By default, the domain name is empty. If the domain name is empty, the domain name information will not be provided to the client.

Parameters  <pool name 12> – Specifies the name of the pool.
            <domain name 64> – Specifies the domain name of the client.

Restrictions  Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the domain name option of the DHCP pool:

```
DES-3528:5#config dhcp pool domain_name accounting 10.10.10.0/24
Command: config dhcp pool domain_name accounting 10.10.10.0/24
Success.

DES-3528:5#
```

config dhcp pool dns_server

Purpose  Used to specify the IP address of a DNS server that is available to a DHCP client. Up to three IP addresses can be specified in one command line.

Syntax  config dhcp pool dns_server <pool_name 12> {<ipaddr>} {<ipaddr>} {<ipaddr>}

Description  If a DNS server is not specified, the DNS server information will not be provided to the client. If this command is entered twice in the same pool, the second command will overwrite the first command.

Parameters  <pool name 12> – Specifies the name of the pool.
            <ipaddr> – Specifies the IP address of the DNS server.

Restrictions  Only Administrator and Operator-level users can issue this command.

Example usage:

To configure the DNS server’s IP address:

```
DES-3528:5#config dhcp pool dns_server accounting 10.10.10.1
Command: config dhcp pool dns_server accounting 10.10.10.1
Success.

DES-3528:5#
```
**config dhcp pool netbios_name_server**

**Purpose**
Used to specify the NetBIOS WINS server that is available to a Microsoft DHCP client. Up to three IP addresses can be specified in one command line.

**Syntax**
```
config dhcp pool netbios_name_server <pool_name 12> {< ipaddr>} {< ipaddr>} {< ipaddr>}
```

**Description**
Windows Internet Naming Service (WINS) is a name resolution service that Microsoft DHCP clients use to correlate host names to IP addresses within a general grouping of networks. If the name of the netbios server is not specified, the netbios name server information will not be provided to the client.

If this command is entered twice for the same pool, the second command will overwrite the first command.

**Parameters**
- `<pool name 12>` – Specifies the name of the pool.
- `<ipaddr>` – Specifies the IP address of the WINS server.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the WINS Server’s IP address:

```
DES-3528:5#config dhcp pool netbios_name_server accounting 10.10.10.1
Command: config dhcp pool netbios_name_server accounting 10.10.10.1
Success.
DES-3528:5#
```

**config dhcp pool netbios_node_type**

**Purpose**
Used to specify the NetBIOS node type for a Microsoft DHCP client.

**Syntax**
```
config dhcp pool netbios_node_type <pool_name 12> [broadcast | peer_to_peer | mixed | hybrid]
```

**Description**
The NetBIOS node type for Microsoft DHCP clients can be one of four settings: broadcast, peer-to-peer, mixed, or hybrid. This command is used to configure NetBIOS over a TCP/IP device.

By default, NetBIOS node type is broadcast.

**Parameters**
- `<pool name 12>` – Specifies the name of the pool.
- `<node type>` – Specifies the NetBIOS node type for a Microsoft DHCP client.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the NetBIOS node type:

```
DES-3528:5#config dhcp pool netbios_node_type accounting hybrid
Command: config dhcp pool netbios_node_type accounting hybrid
Success.
DES-3528:5#
```
**config dhcp pool default_router**

**Purpose**
Used to specify the IP address of the default router for a DHCP client. Up to three IP addresses can be specified in one command line.

**Syntax**
```
config dhcp pool default_router <pool_name 12> {< ipaddr>} {< ipaddr>} {< ipaddr>}
```

**Description**
After a DHCP client has booted, the client begins sending packets to its default router. The IP address of the default router should be on the same subnet as the client.
If the default router is not specified, the default router information will not be provided to the client.
If this command is entered twice in the same pool, the second command will overwrite the first command.

**Parameters**
- `<pool name 12>` – Specifies the name of the pool.
- `<ipaddr>` – Specifies the IP address of the default router.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the default router:
```
DES-3528:5#config dhcp pool default_router accounting 10.10.10.1
Command: config dhcp pool default_router accounting 10.10.10.1
Success.
DES-3528:5#
```

**config dhcp pool lease**

**Purpose**
Used to specify the duration of the lease.

**Syntax**
```
config dhcp pool lease <pool_name 12> [<day 0-365> <hour 0-23><minute 0-59> | infinite]
```

**Description**
By default, each IP address assigned by a DHCP server comes with a one-day lease, which is the amount of time that the address is valid.

**Parameters**
- `<pool_name 12>` – Specifies the name of the pool.
- `<day 0-365>` – Specifies the days of lease.
- `<hour 0-23>` – Specifies the hours of the lease.
- `<minute 0-59>` – Specifies the minutes of the lease
- `infinite` – Specifies that the lease will be infinite.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

Example usage:
To configure the lease of a pool:
```
DES-3528:5#config dhcp pool lease accounting infinite
Command: config dhcp pool lease accounting infinite
Success.
DES-3528:5#
```
**config dhcp pool boot_file**

<table>

<tr>
<td>Syntax</td>
<td><code>config dhcp pool boot_file &lt;pool_name 12&gt; {&lt;file_name 64&gt;}</code></td>
</tr>
</tbody>
</table>
| Description   | The boot file is used to store the boot image for the client. The boot image is generally the operating system the client uses to load.  
If this command is entered twice for the same pool, the second command will overwrite the first command.  
If the boot file is not specified, the boot_file information will not be provided to the client. |
| Parameters    | `<pool_name 12>` – Specifies the name of the pool.  
`<file_name 64>` – Specifies the file name of the boot image. |
| Restrictions  | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure the boot file:

```
DES-3528:5# config dhcp pool boot_file accounting boot.had
Command: config dhcp pool boot_file accounting boot.had
Success.
DES-3528:5#
```

**config dhcp pool next_server**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to specify the next server to be used in the DHCP client boot process.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config dhcp pool next_server &lt;pool_name 12&gt; {&lt;ipaddr&gt;}</code></td>
</tr>
</tbody>
</table>
| Description   | The next server used by the DHCP client boot process is typically a TFTP server. If the next server information is not specified, it will not be provided to the client. If this command is entered twice for the same pool, the second command will overwrite the first command.  
It is allowed to specify next_server but not specify the boot file, or specify the boot file but not specify the next_server. |
| Parameters    | `<pool_name 12>` – Specifies the name of the pool.  
`<ipaddr>` – Specifies the IP address of the next server. |
| Restrictions  | Only Administrator and Operator-level users can issue this command. |

Example usage:

To configure the next server:

```
DES-3528:5# config dhcp pool next_server accounting 192.169.0.1
Command: config dhcp pool next_server accounting 192.169.0.1
Success.
DES-3528:5#
```
### config dhcp ping_packets

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to specify the number of ping packets the DHCP server sends to an IP address before assigning this address to a requesting client.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config dhcp ping_packets &lt;number 0-10&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>By default, the DHCP server pings a pool address twice before assigning the address to a DHCP client. If the ping is unanswered, the DHCP server assumes (with a high probability) that the address is not in use and assigns the address to the requesting client. If the ping is answered, the server will discard the current IP address and try another IP address.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;number 0-10&gt; – Specifies the number of ping packets. 0 means there is no ping test.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator and Operator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure ping packets:

```
DES-3528:5# config dhcp ping_packets 4
Command: config dhcp ping_packets 4
Success.
DES-3528:5#
```

### config dhcp pool ping_timeout

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to specify the amount of time the DHCP server must wait before timing out a ping packet.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config dhcp ping_timeout &lt;millisecond 10-2000&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>By default, the DHCP server waits 10 milliseconds before timing out a ping packet.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;millisecond&gt; – Specifies the amount of time the DHCP server must wait before timing out a ping packet. The default value is 500.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the timeout value for ping packets:

```
DES-3528:5# config dhcp ping_timeout 100
Command: config dhcp ping_timeout 100
Success.
DES-3528:5#
```
create dhcp pool manual_binding

Purpose
Used to specify the distinct identification of the client in dotted-hexadecimal notation or hardware address, for example, 0122.b708.1388, where 01 represents the Ethernet media type and the IP address pair.

Syntax
create dhcp pool manual_binding <pool_name 12> <ipaddr> hardware_address <macaddr> {type [Ethernet | IEEE802]}

Description
An address binding is a mapping between the IP address and MAC address of a client. The IP address of a client can be assigned manually by an administrator or assigned automatically from a pool by a DHCP server. The dynamic binding entry will be created when an IP address is assigned to the client from the pool network's address.
When creating a DHCP pool manual binding entry if the type is not specified, then the type will be defaulted to ethernet. For the match operation, the hardward type and the hardware address field in the protocol fields will be used to match against the entry.
The IP address specified in the manual binding entry must be a range within the network used by the DHCP pool. If the user specifies a conflict IP address, an error message will be returned.
If a number of manual binding entries are created, and the network address for the pool is changed so that a conflict occurs, those manual binding entries which are in conflict with the new network address will be automatically deleted.

Parameters
<pool name 12> – Specifies the name of the pool.
<macaddr> – Specifies the hardware address.
type – Either Ethernet or IEEE802 can be specified.
<ipaddr> – Specifies the IP address which will be assigned to the specifies client.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To create manual binding entries:

DES-3528:5# create dhcp pool manual_binding accounting 10.10.10.1 hardware_address 00-80-C8-02-02-02 type Ethernet
Command: create dhcp pool manual_binding accounting 10.10.10.1 hardware_address 00-80-C8-02-02-02 type Ethernet
Success.

DES-3528:5#

delete dhcp pool manual_binding

Purpose
Used to specify the distinct identification of the client in dotted-hexadecimal notation or hardware address to delete.

Syntax
delete dhcp pool manual_binding <pool_name 12> [<ipaddr> | all]

Description
An address binding is a mapping between the IP address and MAC address of a client. The delete dhcp pool manual_binding command can be used to delete the manual binding entries.

Parameters
<pool name 12> – Specifies the name of the pool.
<ipaddr> – Specifies the IP address which will be deleted.
all – Specifies that all IP addresses will be deleted.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:
To delete manual binding entries:

DES-3528:5#
DES-3528:5# delete dhcp pool manual_binding accounting 10.10.10.1
Command: delete dhcp pool manual_binding accounting 10.10.10.1
Success.
DES-3528:5#

clear dhcp binding
Purpose: Used to clear all the dynamic binding entries for a pool or all pools.
Syntax: clear dhcp binding [<pool_name 12> | all | all]
Description: This command clears a specific pool’s binding entries, or all binding entries in all pools.

**NOTE:** This command will not clear the dynamic binding entry which matches a manual binding entry.

Parameters: <pool_name 12> – Specifies the name of the pool.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To clear a dynamic binding entry in pool “accounting”:

DES-3528:5# clear dhcp binding all
Command: clear dhcp binding all
Success.
DES-3528:5#

show dhcp binding
Purpose: Used to display the current binding entry information.
Syntax: show dhcp binding { <pool_name 12> }
Description: This command displays the current binding entry information.
Parameters: <pool_name 12> – Specifies the name of the pool.
Restrictions: None.

Example usage:
To display dynamic binding entries:

DES-3528:5# show dhcp binding accounting
Command: show dhcp binding accounting

<table>
<thead>
<tr>
<th>Pool Name</th>
<th>IP Address</th>
<th>Hardware Address</th>
<th>Type</th>
<th>Status</th>
<th>Lifetime</th>
</tr>
</thead>
<tbody>
<tr>
<td>accounting</td>
<td>192.168.0.1</td>
<td>00-08-C8-08-13-88</td>
<td>Ethernet</td>
<td>Manual</td>
<td>86400</td>
</tr>
</tbody>
</table>

Total Entries: 1
DES-3528:5#
show dhcp pool manual_binding

**Purpose**
Used to display the configured manual binding entries.

**Syntax**
`show dhcp pool manual binding {<pool_name 12>}`

**Description**
This command displays the configured manual binding entries.

**Parameters**
- `<pool name 12>` – Specifies the name of the pool.

**Restrictions**
None.

**Example usage:**
To display the configured manual binding entries:

```
DES-3528:5#show dhcp pool manual_binding
Command: show dhcp pool manual_binding

<table>
<thead>
<tr>
<th>Pool Name</th>
<th>IP Address</th>
<th>Hardware Address</th>
<th>Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>p1</td>
<td>192.168.0.1</td>
<td>00-08-C8-08-13-88</td>
<td>Ethernet</td>
</tr>
<tr>
<td>p1</td>
<td>192.168.0.2</td>
<td>00-80-C8-08-13-99</td>
<td>Ethernet</td>
</tr>
</tbody>
</table>

Total Entries: 2
```

show dhcp pool

**Purpose**
Used to display the information for DHCP pool.

**Syntax**
`show dhcp pool {<pool_name 12>}`

**Description**
If the name is not specified, information for all pools will be displayed.

**Parameters**
- `<pool name 12>` – Specifies the name of the pool.

**Restrictions**
None.

**Example usage:**
To display dhcp pool entries:

```
DES-3528:5#show dhcp pool accounting
Command: show dhcp pool accounting

Pool Name        :accounting
Network Address  :10.10.10.0/24
Domain Name      :10.10.10.0/24
DNS Server       :10.10.10.1
NetBIOS Name Server :10.10.10.1
NetBIOS Node Type :Hybrid
Default Router   :10.10.10.1
Pool Lease       :Infinite
Boot File        :boot.had
Next Server      :192.168.0.1

Total Entries: 1
```

483
### enable dhcp_server

**Purpose**
Used to enable the DHCP server function.

**Syntax**
```bash
enable dhcp_server
```

**Description**
If the DHCP relay is enabled, the DHCP server cannot be enabled. The opposite is also true.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

---

**Example usage:**

To enable the dhcp_server:

```
DES-3528:5#enable dhcp_server
Command: enable dhcp_server
Success.
DES-3528:5#
```

### disable dhcp_server

**Purpose**
Used to disable the DHCP server function.

**Syntax**
```bash
disable dhcp_server
```

**Description**
This command disables the DHCP server function.

**Parameters**
None.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

---

**Example usage:**

To disable the dhcp_server:

```
DES-3528:5#disable dhcp_server
Command: disable dhcp_server
Success.
DES-3528:5#
```

### show dhcp_server

**Purpose**
Used to display the status of the DHCP server.

**Syntax**
```bash
show dhcp_server
```

**Description**
This command displays the status of the DHCP server.

**Parameters**
None.

**Restrictions**
None.

---

**Example usage:**

To display the dhcp_server:

```bash
```
DES-3528:5# show dhcp_server
Command: show dhcp_server

DHCP Server Global State: Disable
Ping Packet Number : 2
Ping Timeout : 500 ms

DES-3528:5#

clear dhcp conflict_ip

Purpose
Used to clear an entry or all entries from the conflict IP database.

Syntax clear dhcp conflict_ip [<ipaddr> | all]

Description
This command clears an entry or all entries from the conflict IP database.

Parameters
<ipaddr> – The IP address to be cleared.
all – All IP addresses will be cleared.

Restrictions
Only Administrator and Operator-level users can issue this command.

Example usage:

To clear an IP address 10.20.3.4 from the conflict database:

DES-3528:5# clear dhcp conflict_ip 10.20.3.4
Command: clear dhcp conflict_ip 10.20.3.4
Success.

DES-3528:5#

show dhcp conflict_ip

Purpose
Used to display the IP address that has been identified as being in conflict.

Syntax show dhcp conflict_ip {<ipaddr>}

Description
The DHCP server will use PING packets to determine whether an IP address is in conflict with other hosts before binding it’s IP. The IP address which has been identified as in conflict will be moved to the conflict IP database. The system will not attempt to bind the IP address to the conflict IP database unless the user clears it from the conflict IP database.

Parameters
<ipaddr> – The IP address to be displayed.

Restrictions
None.

Example usage:

To display entries in the DHCP conflict IP database:

DES-3528:5# show dhcp conflict_ip
Command: show dhcp conflict_ip

<table>

DES-3528:5#
The Cable Diagnostic commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>cable diagnostic</td>
<td>cable_diag ports [&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**cable diagnostic**

**Purpose**

Used to diagnose the copper cable. If there is an error on the cable, it can determine the type of error and the position where the error occurred.

- **Linked**: This pair has been connected to partner network device and the link is up.
- **ShutDown**: This pair has been connected to another network device, but the partner is powered off.
- **Open**: This pair is left open.
- **Short**: This pair has been shorted between two lines of its own.
- **CrossTalk**: This pair has been shorted between two lines of different pairs.
- **No Cable**: There is no pair connected to the port.
- **-**: This pair has been connected to another network device normally, but other pair has error.
- **Unknown**: The last diagnosis do not obtain the cable' status, please try it again.

**Syntax**

cable_diag ports [<portlist> | all]

**Description**

When a port is in link up status, the diagnostic will obtain the distance of the cable. Since the status is link-up, the cable will not have any problem. Since this diagnostic is for copper cable, the port with fiber cable will be skipped from the diagnostic.

- If the link is up, the abnormal results won’t be shown and the cable length item indicates the length of the cable.
- If the link is down the reason may be that its partner has powered off or the port is disabled, the abnormal results won’t be shown and the cable length item shows the length of the cable.
- If the link is down and there is some error in the cable, the abnormal results will be shown, but the cable length item won’t be shown.

**Parameters**

- **all** – Indicate all ports will be displayed.
- **<portlist>** – Specifies a port or range of ports to be displayed.

**Restrictions**

None.

Example usage:

To do the cable diagnostic on ports 1-7 on the Switch:
Perform Cable Diagnostics: 1-7

<table>
<thead>
<tr>
<th>Port</th>
<th>Type</th>
<th>Link Status</th>
<th>Test Result</th>
<th>Cable Length (M)</th>

Each command is listed, in detail, in the following sections.

### create cfm md

**Purpose**
Used to create a maintenance domain.

**Syntax**
`create cfm md <string 22> level <int 0-7>`

**Description**
Different maintenance domains should have different names.

**Parameters**
- `md` – Specifies the maintenance domain name.
- `level` – Specifies the maintenance domain level.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To create a cfm maintenance domain.

```
DES-3528:5# create cfm md op_domain level 2
Command: create cfm md op_domain level 2
Success.
DES-3528:5#
```

### config cfm md

**Purpose**
Used to configure parameters of a maintenance domain.

**Syntax**
`config cfm md <string 22> {mip [none | auto | explicit] | sender_id [none | chassis | manage | chassis_manage]} (1)`

**Description**
Creation of MIPs on a MA is useful for tracing the link MIP by MIP. It also allows the user to perform loop-back from MEP to an MIP.

**Parameters**
- `md` – Specifies the maintenance domain name.
- `mip` – Specifies and controls the creation of MIPs.
- `none` – Specifies that MIPs will not be created. This is the default value.
- `auto` – MIPs can always be created on any ports in this MD, if that port is not configured with a MEP of this MD.
- `explicit` – MIPs can be created on any ports in this MD, only if the existing lower level has an MEP configured on that port, and that port is not configured with an MEP of this MD.
- `sender_id` – Specifies and control the information to be advertised.
- `none` – Specifies that there is no information to be advertised. This is the default value.
- `chassis` – Advertises the Chassis ID information.
- `manage` – Advertises the Management Address information.
- `chassis_manage` – Advertises both Management Address and Chassis ID information.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

**Example usage:**
To configure cfm on a maintenance domain:

```
DES-3528:5# config cfm md op_domain {mip auto | explicit | sender_id manage | chassis_manage}
Command: config cfm md op_domain {mip auto | explicit | sender_id manage | chassis_manage}
Success.
DES-3528:5#
```
create cfm ma

**Purpose**  
Used to create a maintenance association.

**Syntax**  
create cfm ma <string 22> md <string 22>

**Description**  
Different MAs in a MD must have different MA Names. Different MAs in different MDs may have the same MA Name.

**Parameters**  
- **md** – Specifies the maintenance domain name.
- **ma** – Specifies the maintenance association name.

**Restrictions**  
Only Administrator and Operator-level users can issue this command.

Example usage:

To create a cfm maintenance association:

```
DES-3528:5#create cfm ma op1 md op_domain
Command: create cfm ma op1 md op_domain
Success.
DES-3528:5#
```

config cfm ma

**Purpose**  
Used to configure a maintenance association.

**Syntax**  
config cfm ma <string 22> md <string 22> [vlanid <vlanid 1-4094> | mip [none | auto | explicit | defer] | sender_id [none | chassis | manage | chassis_manage | defer] | ccm_interval [10ms | 100ms | 1sec | 10sec | 1min | 10min] | mepid_list [add | delete] <mepid_list>](1)

**Description**  
The MEP list specified for a MA can be located in different devices. MEPs must be created on ports of these devices explicitly. An MEP will transmit CCM packets periodically across the MA. The receiving MEP will verify these received CCM packets from other MEPs against this MEP list for the configuration integrity check.

**Parameters**  
- **md** – Specifies the maintenance domain name.
- **ma** – Specifies the maintenance association name.
- **vlanid** – Specifies the VLAN Identifier. Different MAs must be associated with different VLANs.
- **mip** – Specifies the control creation of MIPs.
  - **none** – No MIPs will be created.
  - **auto** – MIPs can always be created on any ports in this MA, if that port is not configured with an MEP of that MA.
  - **explicit** – MIP can be created on any ports in this MA, only if the next existent lower level has a MEP configured on that port, and that port is not configured with a MEP of this MA.
  - **defer** – Inherit the settings configured for the maintenance domain that this MA is associated with. This is the default value.
- **sender_id** – Specifies and control the information to be advertised.
  - **none** – Specifies that there is no information to be advertised. This is the default value.
  - **chassis** – Advertises the Chassis ID information.
**config cfm ma**

- **manage** – Advertises the Management Address information.
- **chassis_manage** – Advertises both Management Address and Chassis ID information.
- **ccm_interval** – Specifies the CCM interval.
  - 10ms – 10 milliseconds. Not recommended. For test purposes.
  - 100ms – 100 milliseconds. Not recommended. For test purposes.
  - 1sec – One second.
  - 10sec – Ten seconds. This is the default value.
  - 1min – One minute.
  - 10min – Ten minutes.
- **mepid_list** – Specify the MEPIDs contained in the maintenance association. The range of MEPID is 1-8191.
  - **add** – Add MEPID(s).
  - **delete** – Specifies to delete MEPID(s).

By default, there's no MEPID in a newly created maintenance association.

**Restrictions**

Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure cfm maintenance association:

```
DES-3528:5# config cfm ma op1 md op_domain vlanid 1 ccm_interval 1sec
Command: config cfm ma op1 md op_domain vlanid 1 ccm_interval 1sec
Success.
DES-3528:5#
```

**create cfm mep**

**Purpose**

Used to create a cfm MEP.

**Syntax**

```
create cfm mep <string 32> mepid <int 1-8191> md <string 22> ma <string 22> 
direction [inward | outward] port <port>
```

**Description**

Different MEP in the same MA must have different MEP ID. MD name, MA name, and MEP ID together can identify a MEP.
Different MEP on the same device must have a different MEP name.
Before an MEP is created, its MEPID should be configured in MA's MEPID list.

**Parameters**

- **mep** – Specifies the MEP name. It's unique among all MEPs configured on the device.
- **mepid** – Specifies the MEP MEPID. It should be configured in MA's MEPID list.
- **md** – Specifies the maintenance domain name.
- **ma** – Specifies the maintenance association name.
- **direction** – Specifies the MEP direction.
- **inward** – Specifies the inward facing (up) MEP.
- **outward** – Specifies the outward facing (down) MEP.
- **port** – Specifies the port number. This port should be a member of the MA's associated VLAN.

**Restrictions**

Only Administrator and Operator-level users can issue this command.
Example usage:

To create a cfm MEP.

DE-3528:5# create cfm mep mep1 mepid 1 md op_domain ma op1 direction inward port 2
Command: create cfm mep mep1 mepid 1 md op_domain ma op1 direction inward port 2
Success.

DE-3528:5#

</table>
### config cfm mep

| Alarmed. The default value is 10 seconds |

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

**Example usage:**

To configure the cfm mep:

```
DES-3528:5#config cfm mep mepid 1 md 1 ma 1 state enable ccm enable
Command: config cfm mep mepid 1 md 1 ma 1 state enable ccm enable
Success.
DES-3528:5#
```

### delete cfm mep

**Purpose**
- Used to delete a created MEP.

**Syntax**
```
delete cfm mep [mepname <string 32> | mepid <int 1-8191> md <string 22> ma <string 22>]
```

**Description**
This command is used to delete a created MEP.

**Parameters**
- **mepname** – Specifies the MEP name. It’s unique among all MEPs configured on the device.
- **mepid** – Specifies the MEP MEPID. It should be configured in MA’s MEPID list.
- **md** – Specifies the maintenance domain name.
- **ma** – Specifies the maintenance association name.

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

**Example usage:**

To delete cfm mep:

```
DES-3528:5#delete cfm mep mepname mepl
Command: delete cfm mep mepname mepl
Success.
DES-3528:5#
```

### delete cfm ma

**Purpose**
- Used to delete a created maintenance association.

**Syntax**
```
delete cfm ma <string 22> md <string 22>
```

**Description**
All MEPs created in the maintenance association will be deleted automatically.

**Parameters**
- **md** – Specifies the maintenance domain name.
- **ma** – Specifies the maintenance association name.

**Restrictions**
- Only Administrator and Operator-level users can issue this command.

**Example usage:**

To delete a cfm ma:

```
```

---

493
delete cfm md

Purpose: Used to delete a created maintenance domain.
Syntax: `delete cfm md <string>`
Description: All MEPs and maintenance associations created in the maintenance domain will be deleted automatically.
Parameters:
- `md` – Specifies the maintenance domain name.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To delete a `cfm md`:

```
DES-3528:5#delete cfm md 3
Command: delete cfm md 3
Success.
DES-3528:5#
```

enable cfm

Purpose: Used to enable CFM globally.
Syntax: `enable cfm`
Description: This command is used to enable CFM globally.
Parameters: None.
Restrictions: Only Administrator and Operator-level users can issue this command.

Example usage:
To enable `cfm`:

```
DES-3528:5#enable cfm
Command: enable cfm
Success.
DES-3528:5#
```
### disable cfm

### show cfm

**Purpose**: Used to show CFM information.

**Syntax**:

```
show cfm {md <string 22> {ma <string 22> {mepid <int 1-8191>}} | mepname <string 32>}
```

**Description**: This command is used to show CFM information.

**Parameters**:
- `md` – Specifies the maintenance domain name.
- `ma` – Specifies the maintenance domain name.
- `mepid` – Specifies the MEP MEPID.
- `mepname` – Specifies the MEP name.

**Restrictions**: None.

**Example usage**:

To display cfm:

DES-3528:5#show cfm
Command: show cfm

DES-3528:5#
```

```
show cfm fault
Purpose Used to show fault MEPs.
Syntax show cfm fault {md <string 22> {ma <string 22>}}
Description This command displays all the fault conditions detected by the MEPs contained in the
specified MA or MD. This display provides the overview of fault status by MEPs.
Parameters md – Specifies the maintenance domain name.
ma – Specifies the maintenance domain name.
Restrictions None.

Example usage:
To display cfm fault:
```
```
### show cfm port

**Purpose**
Used to show MEPs and MIPs created on a port.

**Syntax**
```
show cfm port <port> {level <int 0-7> | direction [inward | outward] | vlanid <vlanid 1-4094>}
```

**Description**
This command is used to show MEPs and MIPs created on a port.

**Parameters**
- `port` – Specifies the port number.
- `level` – Specifies the MD Level. If not specified, all levels are shown.
- `direction` – Specifies the MEP direction.
  - `inward` – Inward facing MEP.
  - `outward` – Outward facing MEP.
- `vlanid` – Specifies the VLAN identifier. If not specified, all VLANs are shown.

**Restrictions**
None.

**Example usage:**
To display cfm ports:

```
DES-3528:5#show cfm port 1
Command: show cfm port 1
MAC Address: 10:10:90:08:8g:12

<table>
<thead>
<tr>

</tr>
<tr>
<td>serv_domain</td>
<td>serv2</td>
<td>MIP</td>
<td>3</td>
<td></td>
<td>2</td>
</tr>
</tbody>
</table>
```

### show cfm mipccm

**Purpose**
Used to show MIPCCM database entries.

**Syntax**
```
show cfm mipccm
```

**Description**
All entries in the MIPCCM database will be shown. The MIPCCM entry is similar to FDB which keeps the forwarding port information for a MAC entry.

**Parameters**
None.

**Restrictions**
None.

**Example usage:**
To display the MIPCCM database entries:
DES-3528:5# show cfm mipccm
Command: show cfm mipccm

<table>
<thead>
<tr>
<th>MA</th>
<th>VID</th>
<th>MAC Address</th>
<th>Port</th>
</tr>
</thead>
<tbody>
<tr>
<td>opma</td>
<td>1</td>
<td>00-01-02-03-04-05</td>

<td>00-01-02-03-04-05</td>
<td>3</td>
</tr>
</tbody>
</table>

Total: 2

DES-3528:5#

**cfm linktrace**

**Purpose**
Used to issue a CFM linktrack message.

**Syntax**
```
cfm linktrace <macaddr> [mepname <string 32> | mepid <int 1-8191> md <string 22> ma <string 22>] {ttl <int 2-255> | pdu_priority <int 0-7>}
```

**Description**
This command is used to issue a CFM linktrack message.

**Parameters**
- `<macaddr>` – Specifies the destination MAC address.
- `mepname` – Specifies the MEP name.
- `mepid` – Specifies the MEP MEPID.
- `md` – Specifies the maintenance domain name.
- `ma` – Specifies the maintenance association name.
- `ttl` – Specifies the linktrace message TTL value. The default value is 64.
- `pdu_priority` – The 802.1p priority to be set in the transmitted LTM. If not specified, it uses the same priority as CCMs sent by the MA.

**Restrictions**
None.

Example usage:
To create a cfm linktrace:

```
DES-3528:5# cfm linktrace 00-01-02-03-04-05 mep mep1
Command: cfm linktrace 00-01-02-03-04-05 mep mep1
Transaction ID: 26
Success.
```

DES-3528:5#

**show cfm linktrace**

**Purpose**
Used to show linktrace responses.

**Syntax**
```
show cfm linktrace [mepname <string 32> | mepid <int 1-8191> md <string 22> ma <string 22>] {trans_id <uint>}
```

**Description**
The maximum linktrace responses a device can hold is 64.

**Parameters**
- `mepname` – Specifies the MEP name.
- `mepid` – Specifies the MEP MEPID.
- `md` – Specifies the maintenance domain name.
- `ma` – Specifies the maintenance association name.
- `trans_id` – Specifies the identifier of the transaction to show.

**Restrictions**
None.
Example usage:

To display the cfm linktrace:

```
DES-3528:5#show cfm linktrace mep mepl
Command: show cfm linktrace mep mepl

Trans ID  Source MEP      Destination
-------- ---------------- ------------------
26         mepl           00-01-02-03-04-05

DES-3528:5#show cfm linktrace mep mepl trans_id 26
Command: show cfm linktrace mep mepl trans_id 26

Transaction ID: 26
From MEP mepl to 00-01-02-03-04-05
Start Time 2009-01-01 12:00:00

Hop MEPID MAC Address      Forwarded  Relay Action
--- ---- ----------------- ---------  ------------
-      00-01-02-03-04-05  Yes        FDB
-      00-01-02-03-04-05  Yes        MPDB
8100   00-01-02-03-04-05  No         Hit

DES-3528:5#
```

delete cfm linktrace

**Purpose**
Used to delete received linktrace responses.

**Syntax**
delete cfm linktrace {{md <string 22> {ma <string 22> {mepid <int 1-8191>}} | mepname <string 32>}}

**Description**
This command deletes the stored link trace response data that is initiated by the specified MEP.

**Parameters**
- `mepname` – Specifies the MEP name.
- `mepid` – Specifies the MEP MEPID.
- `md` – Specifies the maintenance domain name.
- `ma` – Specifies the maintenance association name.

**Restrictions**
None.

Example usage:

To delete a cfm linktrace:

```
DES-3528:5#delete cfm linktrace mep mepl
Command: delete cfm linktrace mep mepl

Success.

DES-3528:5#
```
**config cfm ccm_fwd**

**Purpose**
Used to configure CCM PDUs forwarding mode.

**Syntax**
```
config cfm ccm_fwd [software | hardware]
```

**Description**
This command is for test purposes. For ordinary user, it is not suggested to use this command.

By default, the CCM message is handled and forwarded by software. The software can handle the packet based on behaviour defined by the standard. Under a strict environment, there may be substantial amount of CCM packets, and it will consume substantial amount of CPU resource. To meet the performance requirement, the handling of CCM can be changed to hardware mode. This function is especially useful for domain's intermediate device since they only have MIPS. Note that this command can only be used under assistance of technical personnel.

**Parameters**
- `software` – Specifies to forward by software.
- `hardware` – Specifies to forward by hardware.

**Restrictions**
Only Administrator and Operator-level users can issue this command.

---

**Example usage:**
To configure the cfm ccm forwarding mode:

```
DES-3528:5#config cfm ccm_fwd_mode hardware
Command: config cfm ccm_fwd_mode hardware
Success.
DES-3528:5#
```

---

**cfm loopback**

**Purpose**
Used to show MEPs and MIPs created on a port.

**Syntax**
```
cfm loopback <macaddr> [mepname <string 32> | mepid <int 1-8191> md <string 22> ma <string 22>] [num <int 1-65535> | [length <int 0-1500> | pattern <string 1500>] | pdu_priority <int 0-7>]
```

**Description**
The MAC address represents that the destination MEP or MIP which can be reached by this MAC address. The MEP represents the source MEP to initiate the loop-back message. You can press Ctrl+C to exit loop-back test.

**Parameters**
- `<macaddr>` – Specifies the destination MAC address.
- `mepname` – Specifies the MEP name.
- `mepid` – Specifies the MEP MEPID.
- `md` – Specifies the maintenance domain name.
- `ma` – Specifies the maintenance association name.
- `num` – Specifies the number of LBMs to be sent. The default value is 4.
- `length` – Specifies the payload length of LBM to be sent. The default is 0.
- `pattern` – Specifies an arbitrary amount of data to be included in a Data TLV, along with an indication of whether the Data TLV is to be included.
- `pdu_priority` – The 802.1p priority to be set in the transmitted LBMs. If not specified, it uses the same priority as CCMs and LTMs sent by the MA.

**Restrictions**
None.

---

**Example usage:**
To configure cfm loop-back:

```
```

---

501
DES-3528:5# cfm loopback 00-01-02-03-04-05 mep mep1
Command: cfm loopback 00-01-02-03-04-05 mep mep1

Request timed out.

---

**show cfm pkt_cnt**

**Purpose**: Used to show CFM packet RX/TX counters.

**Syntax**:

```
show cfm pkt_cnt {[ports <portlist>{rx | tx}] | rx | tx | ccm}
```

**Description**: CFM packet counters will be shown.

**Parameters**

- `ports` – Specifies which ports’ counter to show. If not specified, all ports will be shown.
- `{rx | tx}` – Shows RX or TX packet counter. If none is specified, both of them are shown.
- `ccm` - Shows the CCM transmission state.

**Restrictions**: None.

Example usage:

- The following example displays the statistics for CFM packets.
- **VidDrop**: The packets dropped due to invalid VID.
- **OpcoDrop**: The packets dropped due to unrecognized CFM opcode.
DES-3528:5#show cfm pkt_cnt
Command: show cfm pkt_cnt

clear cfm pkt_cnt

Purpose
Used to clear the CFM packet RX/TX counters.

Syntax
clear cfm pkt_cnt ([ports <portlist>{rx | tx}] | rx | tx | ccm)

Description
This command clears CFM packet counters.

Parameters
ports – Specifies which ports’ counter to show. If not specified, all ports will be shown.
(rx | tx) – Shows RX or TX packet counter. If none is specified, both of them are shown.
ccm - Shows the CCM transmission state.

Restrictions
None.

Example usage:
To clear the CFM packet RX/TX counters:
DES-3528:5# clear cfm pkt_cnt ports 2 rx
Command: clear cfm pkt_cnt ports 2 rx
Success.
DES-3528:5#

```
config cfm mp_ltr_all
Purpose Used to configure the CFM mp linktrace on the switch.
Syntax config cfm mp_ltr_all [enable | disable]
Description This command configures the CFM mp linktrace on the switch.
Parameters enable – Used to enable the CFM mp linktrace.
disable – Used to disable the CFM mp linktrace.
Restrictions Only Administrator and Operator-level users can issue this command.
```

Example usage:
To configure CFM mp linktrace:

DES-3528:5# config cfm mp_ltr_all enable
Command: config cfm mp_ltr_all enable
Success.
DES-3528:5#

```
show cfm mp_ltr_all
Purpose Used to display the CFM mp linktrace settings on the switch.
Syntax show cfm mp_ltr_all
Description This command displays the CFM mp linktrace settings on the switch.
Parameters None.
Restrictions None.
```

Example usage:
To show the CFM mp linktrace on the Switch:

DES-3528:5# show cfm mp_ltr_all
Command: show cfm mp_ltr_all

All MPs reply LTRs: Enabled
DES-3528:5#
The Switch history commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>

MITIGATING ARP SPOOFING ATTACKS VIA PACKET CONTENT ACL

Address Resolution Protocol (ARP) is the standard method for finding a host's hardware address (MAC address) when only its IP address is known. This protocol is vulnerable because it can spoof the IP and MAC information in the ARP packets to attack a LAN (known as ARP spoofing). This document is intended to introduce ARP protocol, ARP spoofing attacks, and the countermeasure brought by D-Link's switches to counter the ARP spoofing attack.

- How Address Resolution Protocol works

In the process of ARP, PC A will, firstly, issue an ARP request to query PC B’s MAC address. The network structure is shown in Figure-1.

![Figure-1](image)

The ARP request will be encapsulated into Ethernet frame and sent out. As can be seen in Table-2, the “Source Address” in the Ethernet frame will be PC A’s MAC address. Since an ARP request is sent via a broadcast, the “Destination address” is in the format of an Ethernet broadcast (FF-FF-FF-FF-FF-FF).

### Table-1 (ARP Payload)

<table>
<thead>
<tr>
<th>H/W type</th>
<th>Protocol type</th>
<th>H/W address length</th>
<th>Protocol address length</th>
<th>Operation</th>
<th>Sender H/W address</th>
<th>Sender protocol address</th>
<th>Target H/W address</th>
<th>Target protocol address</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>ARP request</td>
<td>00-20-5C-01-11-11</td>
<td>10.10.10.1</td>
<td>00-00-00-00-00-00</td>
<td>10.10.10.2</td>
</tr>
</tbody>
</table>

The ARP request will be encapsulated into Ethernet frame and sent out. As can be seen in Table-2, the “Source Address” in the Ethernet frame will be PC A’s MAC address. Since an ARP request is sent via a broadcast, the “Destination address” is in the format of an Ethernet broadcast (FF-FF-FF-FF-FF-FF).
When the switch receives the frame, it will check the “Source Address” in the Ethernet frame’s header. If the address is not in its Forwarding Table, the switch will learn PC A’s MAC and the associated port into its Forwarding Table.

In addition, when the switch receives the broadcast ARP request, it will flood the frame to all ports except the source port, port 1 (see Figure -2).

![Figure – 2](image)

When the switch floods the frame of ARP requests to the network, all PCs will receive and examine the frame but only PC B will reply to the query as the destination IP address of PC B matches (see Figure-3).

![Figure – 3](image)
When PC B replies to the ARP request, its MAC address will be written into “Target H/W Address” in the ARP payload shown in Table-3. The ARP reply will be then encapsulated into the Ethernet frame again and sent back to the sender. The ARP reply is in a form of Unicast communication.

<table>
<thead>
<tr>
<th>H/W type</th>
<th>Protocol type</th>
<th>H/W address length</th>
<th>Protocol address length</th>
<th>Operation</th>
<th>Sender H/W address</th>
<th>Sender protocol address</th>
<th>Target H/W address</th>
<th>Target protocol address</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>ARP reply</td>
<td>00-20-5C-01-11-11</td>
<td>10.10.10.1</td>
<td>00-20-5C-01-22-22</td>
<td>10.10.2</td>
</tr>
</tbody>
</table>

**Table – 3 (ARP Payload)**

When PC B replies the query, the “Destination Address” in the Ethernet frame will be changed to PC A’s MAC address. The “Source Address” will be changed to PC B’s MAC address (see Table-4).

<table>
<thead>
<tr>
<th>Destination address</th>
<th>Source address</th>
<th>Ether-type</th>
<th>ARP</th>
<th>FCS</th>
</tr>
</thead>
<tbody>
<tr>
<td>00-20-5C-01-11-11</td>
<td>00-20-5C-01-22-22</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Table – 4 (Ethernet frame format)**

The switch will also examine the “Source Address” of the Ethernet frame and find that the address is not in the Forwarding Table. The switch will learn PC B’s MAC and update its Forwarding Table.

```
Forwarding Table
Port1  00-20-5C-01-11-11
Port2  00-20-5C-01-22-22
```
ARP spoofing, also known as ARP poisoning, is a method to attack an Ethernet network which may allow an attacker to sniff data frames on a LAN, modify the traffic, or stop the traffic altogether (known as a Denial of Service - DoS attack). The principle of ARP spoofing is to send the fake, or spoofed ARP messages to an Ethernet network. Generally, the aim is to associate the attacker's or random MAC address with the IP address of another node (such as the default gateway). Any traffic meant for that IP address would be mistakenly re-directed to the node specified by the attacker.

IP spoofing attack is caused by Gratuitous ARP that occurs when a host sends an ARP request to resolve its own IP address. Figure-4 shows a hacker within a LAN to initiate ARP spoofing attack.

In the Gratuitous ARP packet, the “Sender protocol address” and “Target protocol address” are filled with the same source IP address. The “Sender H/W Address” and “Target H/W address” are filled with the same source MAC address. The destination MAC address is the Ethernet broadcast address (FF-FF-FF-FF-FF). All nodes within the network will immediately update their own ARP table in accordance with the sender’s MAC and IP address. The format of Gratuitous ARP is shown in Table-5.
A common DoS attack today can be done by associating a nonexistent or specified MAC address to the IP address of the network’s default gateway. The malicious attacker only needs to broadcast ONE Gratuitous ARP to the network claiming it is the gateway so that the whole network operation will be turned down as all packets to the Internet will be directed to the wrong node.

Likewise, the attacker can either choose to forward the traffic to the actual default gateway (passive sniffing) or modify the data before forwarding it (man-in-the-middle attack). The hacker cheats the victim’s PC to think that it is a router and cheats the router to think it is the victim. As can be seen in Figure-5 all traffic will be then sniffed by the hacker but the users will not notice anything happening.

**Figure – 5**
- **Prevent ARP spoofing via packet content ACL**

Concerning the common DoS attack today caused by the ARP spoofing, D-Link managed switch can effectively mitigate it via its unique Packet Content ACL.

For that reason the basic ACL can only filter ARP packets based on packet type, VLAN ID, Source and Destination MAC information, there is a need for further inspections of ARP packets. To prevent ARP spoofing attack, we will demonstrate here using Packet Content ACL on DES-3528 to block the invalid ARP packets which contain fake gateway’s MAC and IP binding.

![Example topology](image)

**Configuration:**

The configuration logic is listed below:

1. Only when the ARP matches the Source MAC address in Ethernet, the Sender MAC address and Sender IP address in the ARP protocol can pass through the switch. (In this example, it is the gateway’s ARP.)
2. The switch will deny all other ARP packets which claim they are from the gateway’s IP.

The design of Packet Content ACL on DES-3528 series enables users to inspect any offset_chunk. An offset_chunk is a 4-byte block in a HEX format which is utilized to match the individual field in an Ethernet frame. Each profile is allowed to contain up to a maximum of 4 offset_chunks. Furthermore, only one single profile of Packet Content ACL can be supported per switch. In other words, up to 16 bytes of total offset_chunks can be applied to each profile and a switch. Therefore, careful consideration is needed for planning the configuration of the valuable offset_chunks.

In Table-6, you will notice that the Offset_Chunk0 starts from 127th and ends at the 2nd byte. It can also be found that the offset_chunk is scratched from 1 but not zero.
Table-6: Chunk and Packet offset indicates a completed ARP packet contained in the Ethernet frame, which is the pattern for the calculation of packet offset.

### Command

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
</table>
| Step 1 | `create access_profile profile_id 1 profile_name 1 ethernet source_mac FF:FF:FF:FF:FF:FF ethernet_type` | - Create access profile 1  
   - To match Ethernet Type and Source MAC address. |
| Step 2 | `config access_profile profile_id 1 add access_id 1 ethernet source_mac 01-02-03-04-05-06 ethernet_type 0x806 port 1-27 permit` | - Configure access profile 1  
   - Only if the gateway's ARP packet that contains the correct Source MAC in the Ethernet frame can pass through the switch. |
| Step 3 | `create access_profile profile_id 2 profile_name 2 packet_content_mask`  
   - `offset_chunk_1 3 0x00000000 Ethernet Type (2-byte)`  
   - `offset_chunk_2 7 0x00000000 SdlIP (First 2-byte)`  
   - `offset_chunk_3 8 0xFF0000 SdlIP (Last 2-byte)` | - Create access profile 2  
   - The first Chunk starts from Chunk 3: mask for Ethernet Type (Blue in Table-6: 13th & 14th bytes)  
   - The second Chunk starts from Chunk 7: mask for Sender IP (First 2-byte) in ARP packet (Green in Table-6: 29th & 30th bytes)  
   - The third Chunk starts from Chunk 8: mask for Sender IP (Last 2-byte) in ARP packet (Brown in Table-6: 31st & 32nd bytes). |
| Step 4 | `config access_profile profile_id 2 add access_id 1 packet_content`  
   - `offset_chunk_1 0x00000080 Ethernet Type (2-byte): ARP`  
   - `offset_chunk_2 0x000000A5A SdlIP (First 2-byte): 10.90`  
   - `offset_chunk_3 0x5A5A0000 SdlIP(Last 2-byte): 90.90`  
   - `port 1-27 deny` | - Configure access profile 2  
   - The rest of the ARP packets whose Sender IP claim they are the gateway's IP will be dropped. |
| Step 5 | `Save` | - Save config |
This section describes the procedure for resetting passwords on D-Link Switches. Authenticating any user who tries to access networks is necessary and important. The basic authentication method used to accept qualified users is through a local login, utilizing a Username and Password. Sometimes, passwords get forgotten or destroyed, so network administrators need to reset these passwords. This document will explain how the Password Recovery feature can help network administrators reach this goal.

The following steps explain how to use the Password Recovery feature on D-Link devices to easily recover passwords.

**Complete these steps to reset the password:**

1. For security reasons, the Password Recovery feature requires the user to physically access the device. Therefore this feature is only applicable when there is a direct connection to the console port of the device. It is necessary for the user needs to attach a terminal or PC with terminal emulation to the console port of the switch.

2. Power on the switch. After the runtime image is loaded to 100%, the Switch will allow 2 seconds for the user to press the hotkey [*] (Shift + 6) to enter the “Password Recovery Mode”. Once the Switch enters the “Password Recovery Mode”, all ports on the Switch will be disabled.

3. In the “Password Recovery Mode” only the following commands can be used.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>reset config</td>
<td>The reset config command resets the whole configuration will be back to the default value.</td>
</tr>
<tr>
<td>reboot</td>
<td>The reboot command exits the Reset Password Recovery Mode and restarts the switch. A confirmation message will be displayed to allow the user to save the current settings.</td>
</tr>
<tr>
<td>reset account</td>
<td>The reset account command deletes all the previously created accounts.</td>
</tr>
<tr>
<td>reset password</td>
<td>The reset password command resets the password of the specified user. If a username is not specified, the password of all users will be reset.</td>
</tr>
<tr>
<td>(username)</td>
<td></td>
</tr>
<tr>
<td>show account</td>
<td>The show account command displays all previously created accounts.</td>
</tr>
</tbody>
</table>
