Internet Camera With Integrated Web Server & Motion Detection

The D-Link Internet Camera is a security system that allows you to watch and listen remotely. This full-featured camera connects to an Ethernet or wireless network in a building or campus, and to broadband Internet to provide you with high-quality video and audio. Equipped with built-in Web server, micro-phone for listening, motion detected image recording, time-saving trigger event playback, alert message and powerful software for multi-camera monitoring and management, this camera provides a comprehensive system for convenient surveillance from both a local site or remotely from anywhere in the world.

Stand-alone System With Integrated Web Server
The DCS-2000 Internet Camera comes with a built-in CPU and Web server, providing a low-cost solution capable of solving demanding security and home/office monitoring needs. Its integrated Web server eliminates the need to connect the camera to a computer. Once installed, you use the built-in IP address to gain access to the camera, view live streaming video, and make changes to camera settings.

Web-based Remote Access
You can install your camera at home then view the images from anywhere in the world on a computer running Internet Explorer. Directly connected to the Internet without going through any computer, this camera is simple to install and easily integrates with your network environment. This makes this camera an ideal solution for remote surveillance away from home or office.

Multi-Camera Monitoring
Surveillance software is included to let you view up to 16 cameras on a single computer screen at one central location. Images can be recorded to your computer's hard drive manually or according to a pre-set schedule. The camera can be connected to external alarms and sensors, and you can set up automated email alerts for sending through the Internet to alarm you instantly of all unusual happenings.

Motion Detected Recording
Instead of recording 24 hours a day, 7 days a week, images can also be recorded only when motions are detected. This saves disk space and eliminates the time wasted to view unnecessary images. Images can be directly archived straight to your computer hard drive or to a Network Attached Storage. Playback consumes little time with triggered event browsing and fast database searching.

High-Quality Video & Sound
The camera uses MPEG-4 Short Header Mode to stream live video at up to 30 frames per second for real-time viewing. A built-in high-quality microphone allows you to listen while watching live images.

With or Without Wireless LAN
Two models are available: a standard camera, and a wireless camera equipped with 802.11b+ enhanced 22Mbps wireless speed. Both models come with a 10/100Mbps Fast Ethernet port for connection to broadband Internet (via a home gateway router) or to a wired network in a building.
