

## Hotel Mayfair \*\*\*\* in Paris places its trust in D-Link to keep its premises secure

*“For us, the installation of a video surveillance system not only enabled us to protect our clients but also our employees”*

Rayna Ait-Said

President - General Manager

### Context – Hotel Mayfair, Paris, France The need for effective equipment

Behind the Haussmann façade dating from the end of the 19th century, the interior decor of this former private Hotel located in the heart of Paris, has been created and designed in a spirit of authenticity and comfort. The hotel’s 40 bedrooms and 7 junior suites boast a classic and immaculate design along with an elegant and warm atmosphere. Every day the hotel team welcome an affluent clientèle from overseas. Therefore the establishment needs to guarantee a flawless security system.

### The D-Link solution

“We are working with trustworthy people. One of our hotel colleagues recommended the company Advancedge to us as he had been working with them for a long time because of the high-performance products they use for installations” explains Fayna Ait-Said, President General Manager of Hotel Mayfair.

Created in 2005 by a young architect specialising in CAD (computer-aided design) and DTP (desktop publishing), Advancedge supports the development and growth of businesses by enabling them to rapidly access and master new technologies.

The hotel’s technical manager contacted Advancedge in February 2015 to specify the hotel’s requirements more precisely and to define the locations of the hardware.

The plans were validated in March 2015 and the installation was completed in full in April 2015 including the cabling and installation of the cameras.

A total of 23 D-Link cameras were installed throughout the hotel, 21 full HD DCS-6314 dome cameras located inside the hotel and 2 HD DCS-7110 bullet cameras outside.

They are also supplied with a distribution cabinet, three DNR-326 recorders for video storage and two DGS-3120 24PC switches for video distribution.

“I have been working with D-Link for several years and what differentiates it from its competitors is the richness of its product range in terms of switches, cameras and recorders. This has enabled us to create our installations around a consistent product set. D-Link also provides a high standard of ongoing technical and sales support which enables us to maintain a relationship of trust at all levels in our work” explains Yacine Abdelouahab, Managing Director at Advancedge.

### Technology at the service of the hotel sector

The D-Link cameras enable unlimited camera recording as soon as adequate storage capacity is installed. This means that any incident can be identified rapidly and neutralised by the hotel’s authorised personnel.

“For us, the installation of a video surveillance system not only enabled us to protect our clients but also our employees” explains Fayna Ait-Said.

“We do not have security guards to ensure the security of the hotel as it is the reception staff who monitor the entrances and exits. It is very difficult to be vigilant, particularly when the hotel is full. It was therefore very important for us to install effective video surveillance equipment for protection purposes” she concluded.

D-Link products used at Hotel Mayfair – Paris

**DCS-6314 - Full HD Dome Camera**

2 megapixel progressive scan CMOS sensor 1/2.8"  
High definition 1920 x1080 resolution  
WDR image enhancement technology  
Support of H.264, MPEG 4 and MJPEG codecs for streaming and recording  
Motion detection  
Privacy mask

**DCS 7110 - HD Outdoor Network Camera**

1/2.7" megapixel progressive CMOS sensor  
HD resolution: 1280 x 800 (megapixels) at 30 images per second  
IP66 certified weatherproof housing  
Built-in IR LEDs  
Simultaneous streaming of H.264, MJPEG and MPEG-4 compression formats  
Material movement detection  
Privacy mask  
3GPP support  
Digital input/output for sensors and alarms  
Compliance with ONVIF specifications  
D-ViewCam (DCS-100) surveillance software supplied

**DNR-326 - 2-bay professional Network Video Recorder**

2-bay network video recorder using SATA 3.5" hard drives  
Simultaneous streaming recording of up to 9 IP cameras.  
M-JPEG, MPEG4 and H.264 image compression technology  
Live video streaming playback, simultaneous deferred recording and playback  
Intelligent search function for the rapid identification of relevant images  
Programming recorded daily or weekly  
Synchronisation between audio and video recording  
Programmed or manual recording of motion detection  
Continuous recording with automatic overwrite function  
Recovery function if power supply is interrupted  
RAID 1 technology for automatic hard disk mirroring  
Gigabit connectivity for rapid transmission  
Quotas of users/groups for reinforced security and confidentiality

**DGS-3120-24PC L2 24-port managed gigabit switches**

Stackable up to six units  
PoE (Power over Ethernet) versions  
Full security functions  
Standard and enhanced software images  
IPv6 compatibility  
Easy configuration through a web interface  
D-Link Green Technology
