This product can be set up using any current web browser, i.e., Internet Explorer 6 or Netscape Navigator 6.2.3.

**Before You Begin**

1. If you purchased this router to share your high-speed Internet connection with other computers, you must have either an Ethernet-based Cable or DSL modem with an established Internet account from an Internet Service Provider (ISP).

2. It’s best to use the same computer that is connected to your modem for configuring the DI-804HV VPN Router. The DI-804HV acts as a DHCP server and will assign all the necessary IP address information on your network. See Appendix at the end of this Quick Installation Guide or the Manual on the CD-ROM for setting each network adapter to automatically obtain an IP address.

**Check Your Package Contents**

- DI-804HV VPN Router
- CD-ROM (containing Manual and Warranty)
- Ethernet (CAT5 UTP/Straight Through) Cable
- 5V DC Power Adapter

If any of the above items are missing, please contact your reseller.

Connecting The DI-804HV VPN Router To Your Network

A. First, connect the power adapter to the receptor at the back panel of the DI-804HV and then plug the other end of the power adapter to a wall outlet or power strip. The Power LED will turn ON to indicate proper operation.

B. 1. Power off your Cable or DSL modem; some devices may not have a on/off switch and will require you to unplug the power adapter. Now, the DI-804HV should be powered on and the Cable / DSL modem should be turned off.

2. Cable / DSL modem (Power Off) – DI-804HV (Power On)
Connect an Ethernet cable to the Ethernet jack located on the Cable / DSL modem. After the Ethernet cable is securely connected, power on the Cable / DSL modem by turning on the unit or plugging in the power adapter.

3. Cable / DSL modem (Power On) – DI-804HV (Power On)
Insert the other end of the Ethernet cable to the WAN PORT on the back panel of the DI-804HV. The WAN LED light will illuminate to indicate proper connection. If the WAN LED is not illuminated, please go back and step B and repeat its instructions.

C. Insert an Ethernet cable to LAN port 1 on the back panel of the DI-804HV and an available Ethernet port on the network adapter in the computer you will use to configure the DI-804HV. The LED light for LAN Port 1 will illuminate to indicate proper connection. (Note: The LAN Ports on the DI-804HV are Auto-MDI/MDIX. Meaning you can use a straight-through or crossover-Ethernet cable to the LAN Ports.)

D. COM Port for dial-up Internet connection.
Restart Your Computer

Connecting Additional Computers To The DI-804HV

Using additional Ethernet (CAT5 UTP) cables, connect your Ethernet-equipped computers to the remaining Ethernet LAN ports on the back panel of the DI-804HV.

- **M1 LED** – will flash consistently to indicate that the DI-804HV is working properly.
- **WAN LED** – a solid light indicates connection on the WAN port. This LED blinks during data transmission.
- **COM LED** – a solid light indicates a proper connection to a dial-up modem.
- **POWER LED** – a solid light indicates a proper connection to the power supply.
- **M2 LED** – a solid light indicates that Internet connection has been established.
- **LOCAL NETWORK LEDs** – a solid light on the port indicates a connection to an Ethernet enabled computer on ports 1-4. This LED blinks during data transmission.
When you have completed the steps in this *Quick Installation Guide*, your connected network should look similar to this:

### Using The Setup Wizard

Open your Web browser and type “http://192.168.0.1” into the URL address box. Then press the Enter or Return key.

The logon pop-up screen will appear.

Type “admin” for the username and leave the password field blank.

Click OK
The Setup Wizard (continued)

Once you have logged in, the Home screen will appear.

Click Run Wizard

You will see the following screens

Click Next

Set up your new password. You have the option to establish a password.

Click Next
The Setup Wizard (continued)

Choose your time zone from the drop down list.

Click Next

Select your Internet Connection. You will be prompted to select the type of Internet connection for your router.

If you are unsure of which setting to select, please contact your Internet Service Provider.

Click Next

Select Others only if you use PPTP in Europe or Big Pond Cable in Australia.
The Setup Wizard (continued)

If you selected **Dynamic IP Address**, this screen will appear: (Used mainly for Cable Internet service.)

Click the “**Clone MAC Address**” button to automatically copy the MAC address of the network adapter in your computer. You can also manually type in the MAC address.

**What is a MAC address?** Each network adapter has a discrete Media Access Control (MAC) address. Note that some computers and peripherals may already include built-in network adapters.

If your ISP requires a **Static IP Address**, and this option is selected, then this screen will appear:

Enter the IP address information originally provided to you by your ISP. You will need to complete all the required fields.

Click **Next**
4  The Setup Wizard (continued)

If your ISP uses **PPPoE** (Point-to-Point Protocol over Ethernet), and this option is selected, then this screen will appear: (Used mainly for DSL Internet service.)

⚠️ Please be sure to remove any existing PPPoE client software installed on your computers.

Enter in the username and password provided to you by your ISP.

Click **Next**

Configure this section only if you have an analog dial-up account. Otherwise, click **Next** to skip.

Click **Next**
5 Your Setup is Complete!

Test Internet Connection.

You will be returned to the Home tab.

Then relaunch your Web browser (i.e., Internet Explorer or Netscape Navigator), to link to your favorite Web site to test your Internet connection.

For additional settings or information, refer to the Advanced, Tools, or Status tabs on the web-management interface; or to the Manual located on the CD.
To connect to the network, make sure the network adapter in your computer is configured properly. Here’s how to configure the network adapter to obtain an IP address automatically for the DI-804HV Broadband Router.

For **Microsoft Windows XP**: Go to Start > right click on My Network Places > select Properties > Double-click on the Network Connection associated with the Ethernet adapter (i.e., D-Link DFE-530TX+).

1. Click **Internet Protocol (TCP/IP)**
2. Click **Properties**
3. Select **Obtain an IP address automatically**
4. Click **OK**
5. Click **OK**
6. Restart your computer.
For Apple Macintosh OS X:

Go to the Apple Menu Click on Network and Select System Preferences

Click on Network

Select Built-in Ethernet in the show pull down menu

Select Using DHCP in the Configure pull down menu

Click on Apply Now

The IP address information, the Subnet Mask, the Router’s IP address and the Ethernet adapter address will appear
Technical Support

You can find software updates and user documentation on the D-Link website.

D-Link provides free technical support for customers within the U.K.

U.K. customers can contact D-Link technical support through our website, or by phone.

Tech Support for customers within the U.K:
